the Rook's pawn queen versus pieces and many others. He also opens your eyes to typical scenarios that the engines found and fine-tuned in popular openings such as the King's Indian, the Grünfeld, the Slav, the French, and the Sicilian. Learning to Play Aske Plaat, 2020-11-21. In this textbook, the author takes as inspiration recent breakthroughs in game playing to explain how and why deep reinforcement learning works. In particular, he shows why two-person games of tactics and strategy fascinate scientists, programmers, and game enthusiasts and unite them in a common goal to create artificial intelligence (AI). After an introduction to the core concepts, environment, and communities of intelligence and games, the book is organized into chapters on reinforcement learning, heuristic planning, adaptive sampling, function approximation, and self-play. The author takes a hands-on approach throughout with Python code examples and exercises that help the reader understand how AI learns to play. He also supports the main text with detailed pointers to online machine learning frameworks, technical details for AlphaGo, notes on how to play and program Go and chess, and a comprehensive bibliography. The content is class-tested and suitable for advanced undergraduate and graduate courses on artificial intelligence and games. It's also appropriate for self-study by professionals engaged with applications of machine learning and with games development. Finally, it's valuable for any reader engaged with the philosophical implications of artificial and general intelligence. Games represent a modern Turing test of the power and limitations of AI.

Sounding Race in Rap Songs Loren Kajikawa, 2015-03-07. As one of the most influential and popular genres of the last three decades, rap has cultivated a mainstream audience and become a multimillion-dollar industry by promoting highly visible and often controversial representations of blackness. *Sounding Race in Rap Songs* argues that rap music allows us not only to see but also to hear how mass-mediated culture engenders new understandings of race. The book traces the changing sounds of race across some of the best-known rap songs of the past thirty-five years, combining song-level analysis with historical contextualization to show how these representations of identity depend on specific artistic decisions such as those related to how producers make beats. Each chapter explores the process behind the production of hit songs by musicians including Grandmaster Flash and the Furious Five, the Sugarhill Gang, Run-DMC, Public Enemy, N.W.A., Dr. Dre, and Eminem. This series of case studies highlights stylistic differences in sound, lyrics, and imagery with musical examples and illustrations that help answer the core question: can we hear race in rap songs? Integrating theory from interdisciplinary areas, this book will resonate with students and scholars of popular music, race relations, urban culture, ethnomusicology, sound studies, and
