Granivorous Birds in Ecosystems Jan Pinowski, S. Charles Kendeigh, 2012-03-29 This book was first published in 1977 It deals with the importance of weed seed and grain eating birds in natural and agricultural environments These birds are to be found worldwide and are a component of man made ecosystems where they are associated with man s main food crops An analysis is made of their evolution and genetics population dynamics energy and food requirements impact on ecosystems and control Principles procedures and basic data are presented that can be applied to the evaluation and control of pest species anywhere in the world In this synthesis volume full use is made of the systems approach the ecological and evolutionary aspects of the study are integrated In linking the studies with fundamental work on bioenergetics new insights are provided into the behavioural and applied aspects of granivory Studies which encompass archaeological and anthropological investigations form a backcloth for the detailed interpretation of the population biology and bioenergetics of birds Granivorous Birds in Ecosystems ,1977 **The Ecology of Bird Communities** John A. Wiens, 1989 A major study of avian community ecology *Terrestrial Ecosystems in Changing Environments* Herman Henry Shugart, 1998-03-26 A unique review of the problem of predicting the response of ecosystems to changed conditions The Peruvian Anchoveta and Its Upwelling Ecosystem Daniel Pauly, Instituto del Mar del Perù, 1987-01-01 **Ecology and Management of Blackbirds (Icteridae) in North America** George M. North America and Hawaii Harold A. Mooney, James A. Drake, 2012-12-06 The diversity of the earth's climates superimposed upon a complex configuration of physical features has provided the conditions for the evolution of a remarkable array of living things which are linked together into complex ecosystems. The kinds of organisms comprising the ecosystems of the world and the nature of their interactions have constantly changed through time due to coevolutionary interactions along with the effects of a continually changing physical environment. In recent evolutionary time there has been a dramatic and ever accelerating rate of change in the configuration of these ecosystems because of the increasing influence of human beings. These changes range from subtle modifications caused by anthropogenically induced alterations in atmospheric properties to the total destruction of ecosystems. Many of these modifications have provided the fuel, food, and fiber which have allowed the expansion of human populations. Unfortunately there have been many unanticipated changes which accompanied these modifications which have had effects detrimental to human welfare including substantial changes in water and air quality. For example the use of high sulfur coal to produce energy in parts of North America is altering the properties of freshwater lakes and forests because of acidification.

Ecology and Management of Neotropical Migratory Birds Thomas E. Martin, Deborah M. Finch, 1995-10-19 The apparent decline in numbers among many species of migratory songbirds is a timely subject in conservation biology particularly for ornithologists, ecologists, and wildlife managers. This book is an attempt to discuss the problem in full scope. It presents an ambitious comprehensive assessment of the current status of neotropical migratory birds in the U.S. and the methods and strategies used to conserve migrant populations. Each chapter is an essay reviewing and assessing the trend from a different viewpoint, all written by leaders in the fields of ornithology, conservation, and population biology.

The Ecology of Natural Disturbance and Patch Dynamics Steward T.A. Pickett, P. S. White, 2013-10-22 Ecologists are aware of the importance of natural dynamics in ecosystems Historically the focus has been on the development in succession of equilibrium communities which has generated an understanding of the composition and functioning of ecosystems Recently many have focused on the processes of disturbances and the evolutionary significance of such events This shifted emphasis has inspired studies in diverse systems The phrase patch dynamics Thompson 1978 describes their common focus The Ecology of Natural Disturbance and Patch Dynamics brings together the findings and ideas of those studying varied systems presenting a synthesis of diverse individual contributions

Why Birds Matter Çagan H. Sekercioglu, Daniel G. Wenny, Christopher J. Whelan, 2024-05-31 For over one hundred years ornithologists and amateur birders have jointly campaigned for the conservation of bird species documenting not only birds beauty and extraordinary diversity but also their importance to ecosystems worldwide But while these avian enthusiasts have noted that birds eat fruit carrion and pests spread seed and fertilizer and pollinate plants among other services they have rarely asked what birds are worth in economic terms In *Why Birds Matter* an international collection of ornithologists botanists ecologists conservation biologists and environmental economists seeks to quantify avian ecosystem services the myriad benefits that birds provide to humans The first book to approach ecosystem services from an ornithological perspective *Why Birds Matter* asks what economic value we can ascribe to those services if any and how this value should inform conservation Chapters explore the role of birds in such important ecological dynamics as scavenging nutrient cycling food chains and plant animal interactions all seen through the lens of human well being to show that quantifying avian ecosystem services is crucial when formulating contemporary conservation strategies Both elucidating challenges and providing examples of specific ecosystem valuations and guidance for calculation the contributors propose that in order to advance avian conservation we need to appeal not only to hearts and minds but also to wallets

result of mechanisation and use of agrochemicals Farmland bird communities are described and their composition related to farm structure and land use Based extensively on empirical data extracted from the British Trust for Ornithology s Common Bird Census and from nest histories recorded in the BTO S Nest Record Scheme the book presents an important analysis of the position of agricultural bird populations under modern farming systems Particular examination has been made of the impact of changing methods rotations and crops which have been underestimated in the past Resulting from the co operation between a professional ornithologist and a working cereal farmer this book provides an objective and informed view of the impact of British agriculture on bird populations
