Walker, Andreas W. Goetz, 2016-04-18 *Electronic Structure Calculations on Graphics Processing Units* From Quantum Chemistry to Condensed Matter Physics provides an overview of computing on graphics processing units GPUs a brief introduction to GPU programming and the latest examples of code developments and applications for the most widely used electronic structure methods The book covers all commonly used basis sets including localized Gaussian and Slater type basis functions plane waves wavelets and real space grid based approaches The chapters expose details on the calculation of two electron integrals exchange correlation quadrature Fock matrix formation solution of the self consistent field equations calculation of nuclear gradients to obtain forces and methods to treat excited states within DFT Other chapters focus on semiempirical and correlated wave function methods including density fitted second order Møller Plesset perturbation theory and both iterative and perturbative single and multireference coupled cluster methods

Electronic Structure Calculations on Graphics Processing Units From Quantum Chemistry to Condensed Matter Physics presents an accessible overview of the field for graduate students and senior researchers of theoretical and computational chemistry condensed matter physics and materials science as well as software developers looking for an entry point into the realm of GPU and hybrid GPU CPU programming for electronic structure calculations

Deep Learners and Deep Learner Descriptors for Medical Applications Loris Nanni, Sheryl Brahnam, Rick Brattin, Stefano Ghidoni, Lakhmi C. Jain, 2020-05-15 This book introduces readers to the current trends in using deep learners and deep learner descriptors for medical applications It reviews the recent literature and presents a variety of medical image and sound applications to illustrate the five major ways deep learners can be utilized 1 by training a deep learner from scratch chapters provide tips for handling imbalances and other problems with the medical data 2 by implementing transfer learning from a pre trained deep learner and extracting deep features for different CNN layers that can be fed into simpler classifiers such as the support vector machine 3 by fine tuning one or more pre trained deep learners on an unrelated dataset so that they are able to identify novel medical datasets 4 by fusing different deep learner architectures and 5 by combining the above methods to generate a variety of more elaborate ensembles This book is a value resource for anyone involved in engineering deep learners for medical applications as well as to those interested in learning more about the current techniques in this exciting field A number of chapters provide source code that can be used to investigate topics further or to kick start new projects
