Garnsworthy, J. Wiseman, 2010-11-01 Authored by international experts in the animal production industry this record of the proceedings of the 43rd University of Nottingham Feed Conference explores topics such as feed evaluation systems the effects of fatty acids on fertility and the interactions between nutrition stress and the immune system Filled with comprehensive analyses of the issues as well as practical applications this is an essential read for researchers consultants animal science students legislators and practitioners The newest volume in the series this detailed account contains the most recent information in the livestock industry *The Grass Crop* M. Jones, 2013-03-07 Grass is a very important world crop In some countries for example the UK Australia and New Zealand animal products from grassland make a greater contribution to the value of agricultural production than does any other crop Yet research being undertaken to further our understanding of the factors affecting the growth and productivity of grasslands has trailed in the shadow of the determined efforts made to improve our knowledge of cereals and to a somewhat lesser extent legumes However in spite

of its low profile grassland research has resulted in considerable advances in our knowledge in the last 20 years and we feel that this book provides a timely opportunity to bring together some of this work in a review of what is primarily the ecophysiology of the temperate grass crop Unlike other crops grown for their grain or vegetative parts grass and grassland products are used almost entirely for the feeding of ruminant animals the interaction of the sward and the animal thus adds an extra dimension to investigations of the productivity of grassland No one author could adequately encompass the breadth of work covered in the book Acknowledged experts have therefore been selected as contributors to provide an up to date review of their own specialized areas Whilst multi author texts can cause problems of lack of uniformity of approach each contributor has been made aware of the contents of the other chapters in an attempt both to provide continuity and to prevent glaring overlaps

Advances in Equine Nutrition IV J. D. Pagan, 2009-09-01 Written by leading research scientists this informative compilation examines the latest advances in equine nutrition veterinary medicine and exercise physiology for a range of horses including the broodmare the growing horse and the performance horse While focusing on foraging and general nutrition this resource also explores specialized management and techniques for the prevention of injuries and diseases such as insulin resistance and hyperkalemic periodic paralysis HYPP

Grasslands Stephen Reynolds, John Frame, 2005-01-07 This book looks at significant current grassland problems and issues and provides an insight into grassland productivity in diverse areas of the world with their various production systems There is a focus on recent technical advances and the prospects for further innovation through twenty one chapters by eminent grassland scientists grouped into seven sections forage germplasm forage conservation grass based systems and organic production climate change biodiversity and biotechnology geographical information systems farmer and pastoralist participation and regional developments The book is timely in view of the expanding human and livestock populations especially in arid and semi arid environments with the consequent pressure on the world's grasslands

Agricultural Plants R. H. M. Langer, G. D. Hill, 1991-11-14 The future of mankind depends on ever increasing agricultural production to provide food fibre fuel and other essential commodities This can only be achieved through a sound knowledge of the plants which feature prominently in agriculture This book describes these plants in detail together with the products which are obtained from them The opening chapter on world population and food supply is followed by a general introduction to plant structure The major part of the book then considers economically important field crops and pasture plants of temperate and subtropical regions on a family by family basis Fruit crops flowers and trees are not considered The book concludes with a discussion of physiological principles of crop growth and yield This is an introductory text suitable for the teaching of agricultural botany to undergraduate students and is intended to bridge the gap between classical botany and agronomy

Foraging David W. Stephens, Joel S. Brown, Ronald C. Ydenberg, 2008-09-15 Foraging is fundamental to animal survival and reproduction yet it is much more than a simple matter of finding food it is a biological imperative Animals must find and consume resources to succeed and they make extraordinary efforts to do so For instance pythons rarely eat but when they do their meals are large as much as 60 percent larger than their own bodies The snake s digestive system is normally dormant but during digestion metabolic rates can increase fortyfold A python digesting quietly on the forest floor has the metabolic rate of thoroughbred in a dead heat This and related foraging processes have broad applications in ecology cognitive science anthropology and conservation biology and they can be further extrapolated in economics neurobiology and computer science Foraging is the first comprehensive review of the topic in more than twenty years A monumental undertaking this volume brings together twenty two experts from throughout the field to offer the latest on the mechanics of foraging modern foraging theory and foraging ecology The fourteen essays cover all the relevant issues including cognition individual behavior caching behavior parental behavior antipredator behavior social behavior population and community ecology herbivory and conservation Considering a wide range of taxa from birds to mammals to amphibians Foraging will be the definitive guide to the field
