**Grasshoppers and Grassland Health** Jeffrey A. Lockwood, Alexandre V. Latchininsky, Michael G. Sergeev, 2012-12-06

Acridids grasshoppers and locusts can range from being rare curiosities to abundant menaces. Some are threatened with extinction and become subjects of intensive conservation efforts while others are devastating pests and become the objects of massive control programmes. Even within a species there are times when the animal is so abundant that its crushed masses cause the wheels of trains to skid. The Rocky Mountain grasshopper *Melanoplus spretus* Walsh in western North America in the 1860s and 1870s while at other times the animal is alarmingly scarce. The Rocky Mountain grasshopper went extinct in the early 1900s. Why are there these extremes in one insect family and even in a single species? The NATO workshop examined this paradox and its implications for Environmental Security which must address both the elements of land use, agricultural production and pest management and conservation of biodiversity. The reconciliation of these objectives clearly demands a critical assessment of current knowledge and policies, identification of future research and close working relationships among scientists. Insects can present two clear faces as well as the intervening gradation. These extremes require us to respond in two ways: conservation of scarce species and suppression of abundant harmful species. But perhaps most important, these opposite poles also provide the opportunity for an exchange of information and insight.

**Practical guidelines on three locust pests in Caucasus and Central Asia** Latchininsky, A.V., 2024-10-14. The practical guide contains detailed information on the biology, ecology and behaviour of three species of gregarious locusts in Caucasus and Central Asia: CCA the Italian locust *Calliptamus italicus* L. 1758, the Moroccan locust *Dociostaurus maroccanus* Thunberg 1815 and the Asian migratory locust *Locusta migratoria migratoria* L. 1758. It was prepared within the framework of the interregional and multilateral Programme to improve national and regional locust management in CCA which has been implemented under the auspices of the Food and Agriculture Organization of the United Nations (FAO) since 2011 to the benefit of ten countries: Afghanistan, Azerbaijan, Armenia, Georgia, Kazakhstan, Kyrgyzstan, Russian Federation, Tajikistan, Turkmenistan and Uzbekistan. This guide provides comprehensive yet accessible information intended not only for locust control and plant protection specialists in CCA countries but also for scientists, students and the widest circle of readers.

*Environmental History in the Making* Estelita Vaz, Cristina Joanaz de Melo, Lúcia M. Costa Pinto, 2016-10-13. This book is the product of the 2nd World Conference on Environmental History held in Guimarães, Portugal in 2014. It gathers works by authors from the five continents addressing concerns raised by past events so as to provide information to help manage the present and the future. It reveals how our cultural background and examples of past territorial intervention can help to combat political and cultural limitations through the common language of environmental benefits without disguising harmful past human interventions. Considering that political ideologies such as socialism and capitalism as well as religion fail to offer global paradigms for common ground, an environmentally positive discourse instead of an ecological determinism might serve

as an umbrella common language to overcome blocking factors real or invented and avoid repeating ecological loss Therefore agency environmental speech and historical research are urgently needed in order to sustain environmental paradigms and overcome political cultural and economic interests in the public arena This book intertwines reflections on our bonds with landscapes processes of natural and scientific transfer across the globe the changing of ecosystems the way in which scientific knowledge has historically both accelerated destruction and allowed a better distribution of vital resources or as it in today's world can offer alternatives that avoid harming those same vital natural resources water soil and air In addition it shows the relevance of cultural factors both in the taming of nature in favor of human comfort and in the role of the environment matters in the forging of cultural identities which cannot be detached from technical intervention in the world In short the book firstly studies the past approaching it as a data set of how the environment has shaped culture secondly seeks to understand the present and thirdly assesses future perspectives what to keep what to change and what to dream anew considering that conventional solutions have not sufficed to protect life on our planet

**Advances in Insect Physiology**, 2009-10-14 Advances in Insect Physiology publishes volumes containing important comprehensive and in depth reviews on all aspects of insect physiology It is an essential reference source for invertebrate physiologists and neurobiologists entomologists zoologists and insect biochemists First published in 1963 the serial is now edited by Steven Simpson and Jerome Casas to provide an international perspective This volume is a thematic volume focusing on locust phase polyphenism Contributions from the leading researchers in entomology Discusses the physiological diversity in insects Includes in depth reviews with valuable information for a variety of entomology disciplines

**Before They Vanish** Paul R. Ehrlich, Gerardo Ceballos, Rodolfo Dirzo, 2024-09-17 Legendary conservationists show us that we still have the power to prevent critical consequences of the sixth extinction in this game changing book Can we save threatened animals and ecosystems in the midst of a mass extinction The answer is a resounding yes Before They Vanish shows us how In this wise and impassioned book renowned conservation scientists Paul R Ehrlich Gerardo Ceballos and Rodolfo Dirzo urge us to shift our thinking rather than succumb to grief over the losses that humanity faces This comprehensive look at a crucial but often overlooked aspect of conservation population extinction or the loss of a species within a specific geographic location guides us onto a new hopeful path The authors argue that conservationists have placed too much emphasis on the extinction of entire species which occurs gradually enough that we only detect it in the direst of cases By that time meaningful action may be impossible By shifting our focus to identifying extinction threats at the more localized population level we can intervene more rapidly and effectively to prevent broader declines before it's too late This change in perspective represents a critical step in saving these vanishing species early detection and intervention may be our last best hope for stemming the tide of this global crisis Using examples from the worlds of vertebrates invertebrates plants fungi and microorganisms the authors explain the concept of population extinction its causes and consequences and how to prevent the mass destruction of the
