Grassland Dynamics:

Grassland Dynamics J. H. M. Thornley, 1998 The development of computer simulation models is an important growth area in both pure and applied ecology The opportunity that mathematical models provide to integrate the components of an ecosystem results in the ability to make quantitative predictions about the future behavior of that system or of elements within it This means that they are powerful tools with wide applications and enormous potential for increasing our understanding of natural systems and our ability to use them in a sustainable way This book is almost uniquely a complete account of one such model the Hurley Pasture Model a dynamic deterministic mechanistic simulation model for grassland which has been developed by the author over some 20 years in collaboration with scientists at several centers Firstly the rationale and theoretical elements of this type of model are described An overview of the Hurley grassland simulator and the derivation and construction of its plant animal soil and litter water and environment and management components is then given Next the model is evaluated by a series of long and short term dynamic simulations and steady state responses which demonstrate how predictions can be made about the effects of for example climate change or particular regimes of fertilizer application grazing or cutting This book will be of great value to grassland agronomists and modellers crop physiologists and plant ecologists and to students of ecology as a case study of a plant ecosystem model It will also be of interest to other ecologists and environmentalists and those in the field of computer modelling and its applications *Grassland Dynamics* Alan K. Knapp, John M. Briggs, David C. Hartnett, 1998 This is the first volume in the Long Term Ecological Research LTER Network Series Established in 1980 the LTER program is exploring a wide variety of biomes characteristic of the United States and developing a baseline for ecosystem dynamics over long time periods and broad spatial scales The volumes in this series will include both comprehensive reviews of research from particular sites and topical overviews which use data from many sites to examine important questions in ecology This volume which focuses on the Konza Prairie in northeastern Kansas is a synthesis of over 15 years of research in pristine tallgrass prairie It gives a comprehensive site description and summarizes the key long term studies that form the basis for the Konza Prairie Long Term Ecological Research Program It then presents a synthesis of the many research areas involved and develops a foundation for future ecological studies in tallgrass prairie With over 150 figures and tables chapters that encompass microbial through landscape scales and an emphasis on lessons learned from long term studies this volume provides a unique and comprehensive perspective on the structural and functional ecology of the grassland ecosystem that once covered most of central North America Grasses and Grassland Ecology David J. Gibson, 2009 This book is the most up to date and thorough account of the natural history of the plants that comprise the most important food crop on Earth the grasses and grasslands **South Brazilian Grasslands** Gerhard Ernst Overbeck, Valério De Patta Pillar, Sandra Cristina Müller, Glayson Ariel Bencke, 2023-12-15 This volume explores the South Brazilian grasslands a unique complex of ecosystems in Brazil Despite high biodiversity and many

important ecosystem services their biodiversity and conservation are neglected both nationally and globally This book provides a state of the art synthesis of knowledge on the biodiversity and its drivers in South Brazilian grasslands and associated ecosystems Further the book discusses conservation challenges and options as well as management strategies that help to maintain the region s uniqueness The chapters present information on biodiversity and ecological features of the region and put this information into the context of historical and current human land uses allowing for links to global discussions of conservation and sustainable development Altogether the book contains 20 chapters organized in four sections The book is directed at researchers students and professionals working with biodiversity and sustainable development in southern Brazil as well as to the international scientific and conservation community interested in grasslands and associated ecosystems particularly in tropical and subtropical regions

California Grasslands Mark R. Stromberg, Jeffrey D. Corbin, Carla D'Antonio, 2007-12-03 This highly synthetic and scholarly work brings together new and important scientific contributions by leading experts on a rich diversity of topics concerning the history ecology and conservation of California s endangered grasslands The editors and authors have succeeded admirably in drawing from a great wealth of recent research to produce a widely accessible and compelling state of the art treatment of this fascinating subject Anyone interested in Californian biodiversity or grassland ecosystems in general will find this book to be an invaluable resource and a major inspiration for further research management and restoration efforts Bruce G Baldwin W L Jepson Professor and Curator UC Berkeley Grasses and grasslands are among the most important elements of the California landscape This is their book embodying the kind of integrated view needed for all ecological communities in California Approaches ranging across an incredibly broad spectrum paleontology and human history basic science and practical management techniques systematics community ecology physiology and genetics physical factors such as water soil nutrients atmospherics and fire biological factors such as competition symbiosis and grazing are nicely tied together due to careful editorial work This is an indispensable reference for everyone interested in the California environment Brent Mishler Director of the University Jepson Herbaria and Professor of Integrative Biology UC Berkeley The structure and function of California grasslands have intrigued ecologists for decades The editors of this volume have assembled a comprehensive set of reviews by a group of outstanding authors on the natural history structure management and restoration of this economically and ecologically important ecosystem Scott L Collins Professor of Biology University of New Mexico

Grassland Management for Sustainable Agroecosystems Abad Chabbi, Gianni Bellocchi, 2020-04-01 This book is a remarkable work that brings together the most recent international research on grassland management covering a broad range of topics and geographical areas The different contributions

explore the complex relationships between landscape climate features and soil fertility with the support of observational data and modeling Clearly this is a wide and multifaceted area of research that opens up new prospects for the management of a biome which should no longer be considered only as a feed resource for domestic herbivore farming but also and above all as a source of ecosystem services to society and a contributor to the sustainability of agriculture Textbooks like this positively demonstrate the importance and significance of how grassland science when viewed in this way can make tangible the progress in understanding the complexity of grassland management and its current and future challenges **Grasslands**

and Climate Change David J. Gibson,Jonathan A. Newman,2019-03-21 A comprehensive assessment of the effects of climate change on global grasslands and the mitigating role that ecologists can play *Trophic Ecology* Torrance C.

Mark D. Schwartz,2011-04-28 Phenology is the study of plant and animal life cycle events which are triggered by environmental changes especially temperature Wide ranges of phenomena are included from first openings of leaf and flower buds to insect hatchings and return of birds Each one gives a ready measure of the environment as viewed by the associated organism Thus phenological events are ideal indicators of the impact of local and global changes in weather and climate on the earth s biosphere Assessing our changing world is a complex task that requires close cooperation from experts in biology climatology ecology geography oceanography remote sensing and other areas This book is a synthesis of current phenological knowledge designed as a primer on the field for global change and general scientists students and interested members of the public With contributions from a diverse group of over fifty phenological experts covering data collection current research methods and applications it demonstrates the accomplishments and potential of phenology as an integrative environmental science General Technical Report RMRS ,1998 **Wildland Fire in Ecosystems** ,2000

Encyclopedia of Ecology Brian D. Fath,2018-08-23 Encyclopedia of Ecology Second Edition Four Volume Set continues the acclaimed work of the previous edition published in 2008 It covers all scales of biological organization from organisms to populations to communities and ecosystems Laboratory field simulation modelling and theoretical approaches are presented to show how living systems sustain structure and function in space and time New areas of focus include micro and macro scales molecular and genetic ecology and global ecology e g climate change earth transformations ecosystem services and the food water energy nexus are included In addition new international experts in ecology contribute on a variety of topics Offers the most broad ranging and comprehensive resource available in the field of ecology Provides foundational content and suggests further reading Incorporates the expertise of over 500 outstanding investigators in the field of ecology including top young scientists with both research and teaching experience Includes multimedia resources such as an Interactive Map Viewer and links to a CSDMS Community Surface Dynamics Modeling System an open source platform for

Australian Vegetation David A.

Keith, 2017-06-15 Australian Vegetation has been an essential reference for students and researchers in botany ecology and natural resource management for over 35 years Now fully updated and with a new team of authors the third edition presents the latest insights on the patterns and processes that shaped the vegetation of Australia The first part of the book provides a synthesis of ecological processes that influence vegetation traits throughout the continent using a new classification of vegetation New chapters examine the influences of climate soils fire regimes herbivores and aboriginal people on vegetation in addition to completely revised chapters on evolutionary biogeography quaternary vegetation history and alien plants The book's second half presents detailed ecological portraits for each major vegetation type and offers data rich perspectives and comparative analysis presented in tables graphs maps and colour illustrations This authoritative book will inspire readers to learn and explore first hand the vegetation of Australia

Climate Variability and Ecosystem Response at Long-Term Ecological Research Sites David Greenland, Douglas G. Goodin, Raymond C. Smith, 2003-10-09

This volume in the Long Term Ecological Research Network Series would present the work that has been done and the understanding and database that have been developed by work on climate change done at all the LTER sites Global climate change is a central issue facing the world which is being worked on by a very large number of scientists across a wide range of fields The LTER sites hold some of the best available data measuring long term impacts and changes in the environment and the research done at these sites has not previously been made widely available to the broader climate change research community This book should appeal reasonably widely outside the ecological community and because it pulls together information from all 20 research sites it should capture the interest of virtually the entire LTER research community

Fire and Plants William J. Bond, B.W. van Wilgen, 2012-12-06 Large regions of the world are regularly burnt either deliberately or naturally However despite the widespread occurrence of such fire prone ecosystems and considerable body of research on plant population biology in relation to fire until now there have only been limited attempts at a coherent conceptual synthesis of the field for use by students or researchers

Handbook of Ecological Models used in Ecosystem and Environmental Management Sven Erik Jorgensen, 2016-04-19 It is estimated that roughly 1000 new ecological and environmental models join the ranks of the scientific literature each year The international peer reviewed literature reports some 20 000 new models spanning the period from 1970 2010 Just to keep abreast of the field it is necessary to design a handbook of models that doesn't merely list them

Grassland Ecophysiology and Grazing Ecology Gilles Lemaire, J. Hodgson, A. Moraes, P. C. F. Carvalho, C.

Nabinger, 2000-11-03 This text presents edited key papers from the International Symposium on Grassland Ecophysiology and Grazing Ecology held in Curitiba Brazil in August 1999 It considers how plants within grasslands respond to and are adapted to grazing animals

Bibliography of Agriculture, 1991-04 **Principles and Standards for Measuring**

Primary Production Timothy J. Fahey, Alan K. Knapp, 2007-05-14 Principles and Standards for Measuring Net Primary

Production in Long Term Ecological Studies is the first book to establish a standardized method for measuring net primary productivity NPP in ecological research Primary productivity is the rate at which energy is stored in the organic matter of plants per unit area of the earth's surface As the beginning stage of the carbon cycle our ability to accurately measure NPP is essential to any ecological analysis as well as agronomy forestry fisheries limnology and oceanography In fact NPP measurements are fundamental to ecosystem studies at thousands of sites around the world All 26 LTER sites will be expected to collect and report data using these new standards but the standards should reach well beyond LTER sites Identified standards for NPP measurements will allow researchers from diverse biomes to authoritatively compare measurements among their sites Comparable measurements will build a foundation for a broad scale understanding of the environmental biological and nutrition controls on NPP The book includes chapters for each of the critical biome types including special techniques that work best in each environment For example there are chapters that discuss grassland ecosystems urban ecosystems marine pelagic ecosystems forest ecosystems and salt marsh ecosystems among others
