

# What is Grassroots Success ? -2

- 'Success' in grassroots soccer is very relative to the ability and ambition of the individual player. For some it is to move to a higher level to progress and further develop their game. For others it is continued enjoyment from playing with their friends on a more limited basis
- Success should be considered as giving everyone the opportunities to play and to take part in social activities built upon the foundation of team spirit.
- **Grassroots success is about pinpointing the needs and investing time and effort in catering to those needs in a way that will allow as many people as possible to continue in the game for as long as they want.**

Kennedy, 2018-09-03 Success is Assured was born from a pair using those design practices over a century ago The Wright Brothers They set about methodically learning the causal relationships between the different design decisions they needed to make and the performance of the airplane The Wright Brothers fundamentally transformed the front end of development into a sharply focused learning and decision making process and thereby eliminated the late process rework in which their competition was stuck Similarly Toyota built an amazing manual product development system that consistently created a cadence of high quality products that customers want Myriads of Lean principles jargon and tools have been introduced and applied with minimal impact on design loopbacks engineering productivity and knowledge reuse within small to midsize engineering companies and almost no penetration within highly complex engineering companies This book teaches methodologies to relentlessly expose knowledge gaps and trade offs early and optimize results before detailed design begins thereby avoiding the expensive firefighting and engineering rework that consume most of our engineering capacity today This book teaches new thinking and methodologies to convert the chaotic front end of product development into a convergent process of set based learning and continuous innovation a game changer for companies that depend upon a steady flow of innovative products Watch this video and understand how to consistently satisfy your customers on time and on budget Visit

**Collaboration** John C. Morris, William Allen Gibson, William Marshall Leavitt, Shana Campbell Jones, 2013-09-26 The nation s approach to managing environmental policy and protecting natural resources has shifted from the national government s top down command and control regulatory approach used almost exclusively in the 1970s to collaborative multi sector approaches used in recent decades to manage problems that are generally too complex too expensive and too politically divisive for one agency to manage or resolve on its own Governments have organized multi sector collaborations as a way to achieve better results for the past two decades We know much about why collaboration occurs We know a good deal about how collaborative processes work Collaborations organized led and managed by grassroots organizations are rarer though becoming more common We do not as yet have a clear understanding of how they might differ from government led collaborations Hampton Roads Virginia located at the southern end of the Chesapeake Bay offers an unusual opportunity to study and draw comparative lessons from three grassroots environmental collaborations to restore three rivers in the watershed in terms of how they build organize and distribute social capital deepen democratic values and succeed in meeting ecosystem restoration goals and benchmarks This is relevant for the entire Chesapeake Bay watershed but is also relevant for understanding grassroots collaborative options for managing protecting and restoring watersheds throughout the U S It may also provide useful information for developing grassroots collaborations in other policy sectors The premise underlying this work is that to continue making progress toward achieving substantive environmental outcomes in a world where the problems are complex expensive and politically divisive more non state stakeholders must be actively involved in defining the problems and developing solutions This will require more multi sector collaborations of the type that governments have

increasingly relied on for the past two decades Our approach examines one subset of environmental collaboration those driven and managed by grassroots organizations that were established to address specific environmental problems and provide implementable solutions to those problems so that we may draw lessons that inform other grassroots collaborative efforts
