Gravity And The Astronauts:

Artificial Gravity Gilles Clément, Angeli Bukley, 2007-05-28 William H Paloski Ph D Human Adaptation and Countermeasures Office NASA Johnson Space Center Artificial gravity is an old concept having gotten its start in the late 19th century when Konstantin Tsiolkovsky considered by many to be the father of the Russian space program realized that the human body might not respond well to the free fall of orbital space flight To solve this problem he proposed that space stations be rotated to create centripetal accelerations that might provide inertial loading similar to terrestrial gravitational loading Einstein later showed in his equivalence principle that acceleration is indeed indistinguishable from gravity Subsequently other individuals of note including scientists like Werner von Braun as well as artists like Arthur C Clarke and Stanley Kubrick devised elaborate solutions for spinning vehicles to provide artificial gravity that would offset the untoward physiological consequences of spaceflight By 1959 concerns about the then unknown human responses to spaceflight drove NASA to consider the necessity of incorporating artificial gravity in its earliest human space vehicles Of course owing in part to the relatively short durations of the planned missions artificial gravity was not used in the early NASA programs
