Science-fiction Everett Franklin Bleiler, Richard Bleiler, 1998 Complementing Science Fiction The Early Years which surveys science fiction published in book form from its beginnings through 1930 the present volume covers all the science fiction printed in the genre magazines Amazing Astounding and Wonder along with offshoots and minor magazines from 1926 through 1936 This is the first time this historically important literary phenomenon which stands behind the enormous modern development of science fiction has been studied thoroughly and accurately The heart of the book is a series of descriptions of all 1 835 stories published during this period plus bibliographic information Supplementing this are many useful features detailed histories of each of the magazines an issue by issue roster of contents a technical analysis of the art work brief authors biographies poetry and letter indexes a theme and motif index of approximately 30 000 entries and general indexes Science Fiction The Gernsback Years is not only indispensable for reference librarians collectors readers and scholars interested in science fiction it is also of importance to the study of popular culture during the Great Depression in the United States Most of its data which are largely based on rare and almost unobtainable sources are not available elsewhere **Gravity's Arc** David Darling, 2007-07-27 Advance Praise for Gravity's Arc A beautifully written exposition of the still mysterious force that holds our universe together and the even more mysterious dark twin that may blow it apart Joshua Gilder coauthor of Heavenly Intrigue A lucid book as up to date as the effect of gravity on the bones of astronauts Denis Brian author of The Unexpected Einstein How did they do it How did one of the greatest geniuses who ever lived retard the study of gravity for 2 000 years How did a gluttonous tyrant with a gold nose revolutionize our view of the solar system How could an eccentric professor shake the foundations of an entire belief system by dropping two objects from a tower How did a falling apple turn the thoughts of a reclusive genius toward the moon And how could a simple patent clerk change our entire view of the universe by imagining himself riding on a beam of light In Gravity's Arc you ll discover how some of the most colorful eccentric and brilliant people in history first locked then unlocked the door to understanding one of nature's most essential forces You ll find out why Aristotle's misguided conclusions about gravity became an unassailable part of Christian dogma how Galileo slowed down time to determine how fast objects fall and why Isaac Newton erased every mention of one man's name from his magnum opus Principia You ll also figure out what Einstein meant when he insisted that space is curved whether there is really such a thing as antigravity and why some scientists think that the best way to get to outer space is by taking an elevator **The Fundamental Force** Len Kurzawa, 2009-12 Albert Einstein discovered that the motion of all objects in the universe is determined by the structure of space In The Fundamental Force author and computer

scientist Len Kurzawa reveals the structure of space and how this structure leads to an understanding of the universe With charts tables and illustrations The Fundamental Force provides a step by step understanding of what is happening in the universe With this understanding unsolved mysteries can now be explained It discusses How gravity works Why the motion of bodies in space follows a pattern Why galaxies rotate like solid objects How galaxies are made and where the matter comes from to make them How the structure of space determines the structure of objects in space The true nature of tides Why planets transition from elliptical to circular orbits Why there is a precession of their orbits How the forces of nature are derived from the one fundamental force Presenting a unique and thoughtful view of the universes origin and future The Fundamental Force changes the way the universe is viewed **Human Exploration of Mars** Stephen J. Hoffman,1997

Personnel representing several NASA field centers have formulated a Reference Mission addressing human exploration of Mars Summarizes their work and describes a plan for the first human missions to Mars using approaches that are technically feasible have reasonable risks and have relatively low costs The architecture for the Mars Reference Mission builds on previous work of the Synthesis Group 1991 and Zubrin s 1991 concepts for the use of propellants derived from the Martian Atmosphere In defining the Reference Mission choices have been made The rationale for each choice is documented however unanticipated technology advances or political decisions might change the choices in the future *20th Natural Philosophy Alliance Proceedings* David de Hilster,2013-07-03 Natural Philosophy Alliance published in conjunction with the 20th Annual Natural Philosophy Alliance conference **Matter and Energy** , *Proceedings, American Philosophical Society (vol. 104, no. 5, 1960)* ,

black holes gravitational waves inflation and the Big Bang Suitable for general readers and for undergraduate courses the treatment uses only high school level mathematics supplemented by optional computer programs to explain the laws of physics governing gravity

Matter Over Mind Elaine Walker, 2016-02-29 Matter Over Mind begins with a thought provoking journey through the Cosmos to illustrate the startling contrast between nature's chaotic but rich processes and the human mind's organized but underperforming habits This book reveals how humanity could achieve even greater heights if we allow ourselves to rethink how we think Chaos theory which is wonderfully explained in this book is a foundational recipe in nature and large group behavior Abstract thinking is the opposite force that leads to frustrating inconsistencies in society and even limitations in technology Viewing the world through both lenses illuminates the deeper dynamics of the world and a better way forward for humanity

Visible and Dark Matter in the Universe Giuseppe Bertin, 2022-12-22 This is a concise introduction to modern astrophysics for physicists with a focus on galaxy dynamics and the discovery of dark matter halos in galaxies Part I summarizes important discoveries in observational astronomy and astrophysics in a manner accessible to those who are new to the topic Building on this foundation Part II describes the study of dark matter and provides more detail on galactic dynamics Important physical concepts that form the basis of key astrophysical phenomena are explained avoiding unnecessary technicalities and complex derivations The approach is semi-empirical and emphasizes the importance of key measurements and observations in formulating fundamental theoretical questions and developing their solutions Students are encouraged to develop a deep understanding of major discoveries and contemporary research topics beyond the simple application of practical models and formulae as a bridge to more advanced study in astrophysics

The God/Man/World Triangle R. Crawford, 1997-10-06 Why is there a world Does it reflect the presence of God in any way Did the world spontaneously come into existence or is there a creator How will it end Does God Exist Do religions give a coherent view of His existence and nature Can we enter into relation with Him Robert Crawford tries to answer these and other questions by arguing that religion and science complement one another and while they use different sources and methods insights can be gleaned from both concerning our nature the world and God Major attention is given to Christianity because modern science arose in that context but the discussion includes the teachings of five other religions in the hope that we can also learn from them
