Great Astronomers Robert Stawell Ball, 2005-10 Purchase one of 1st World Library's Classic Books and help support our free internet library of downloadable eBooks Visit us online at www.1stWorldLibrary.ORG It has been my object in these pages to present the life of each astronomer in such detail as to enable the reader to realise in some degree the man's character and surroundings and I have endeavoured to indicate as clearly as circumstances would permit the main features of the discoveries by which he has become known There are many types of astronomers from the stargazer who merely watches the heavens to the abstract mathematician who merely works at his desk it has consequently been necessary in the case of some lives to adopt a very different treatment from that which seemed suitable for others *Great Astronomers* S. Ball Robert, 2023-05 Sir Robert S Ball's book *Great Astronomers* is an interesting look at the lives and accomplishments of some of the most important people in the history of astronomy From ancient times to the 19th century the book talks about the lives of famous scientists like Ptolemy Copernicus Galileo Newton and Herschel Ball's writing style is interesting and easy to understand which makes it easy to understand difficult ideas about the universe He talks about a lot of different things from what the old Greeks found to Kepler's groundbreaking work and the laws of planetary motion to how Galileo invented the telescope and Herschel found Uranus The book talks about not only what these great astronomers did in science but also their personal lives problems and successes *Great Astronomers* Robert S. Ball, 2019-11-20 In *Great Astronomers* Robert S Ball crafts a compelling narrative that chronicles the lives and contributions of the most notable astronomers throughout history This work elegantly merges engaging biographical sketches with an analysis of their seminal discoveries reflecting on how their relentless curiosity shaped our understanding of the cosmos Ball's literary style is rich yet accessible infusing scientific rigor with a narrative flair that makes complex ideas digestible for lay readers Set against the backdrop of the scientific revolution this book situates each astronomer's achievements within the broader context of the period capturing the excitement and struggle of pioneering astronomical pursuits Robert S Ball was a distinguished astronomer in his own right and his deep involvement with the Royal Observatory significantly informs this text His firsthand experience in the scientific community and his extensive knowledge of the history of astronomy allow him to provide unique insights into the motivations and challenges faced by these great thinkers As a dedicated educator and author Ball's passion for astronomy permeates his writing imparting both respect and admiration for the figures who laid the groundwork for modern astronomical inquiry I highly recommend *Great Astronomers* to anyone fascinated by the marvels of the universe and the intellectual giants who sought to understand it Whether you are a student of astronomy a history buff or simply a curious reader Ball's work offers not only a tribute to these visionaries but also an invitation to explore the stars with renewed wonder and appreciation *Great Astronomers* Robert Stawell Ball, 2024-11-24 AMONG the ranks of the great astronomers it would be difficult to find one whose life presents more interesting features and remarkable vicissitudes than does that of

Galileo We may consider him as the patient investigator and brilliant discoverer We may consider him in his private relations especially to his daughter Sister Maria Celeste a woman of very remarkable character and we have also the pathetic drama at the close of Galileo's life when the philosopher drew down upon himself the thunders of the Inquisition The materials for the sketch of this astonishing man are sufficiently abundant We make special use in this place of those charming letters which his daughter wrote to him from her convent home More than a hundred of these have been preserved and it may well be doubted whether any more beautiful and touching series of letters addressed to a parent by a dearly loved child have ever been written An admirable account of this correspondence is contained in a little book entitled *The Private Life of Galileo* published anonymously by Messrs Macmillan in 1870 and I have been much indebted to the author of that volume for many of the facts contained in this chapter Galileo was born at Pisa on 18th February 1564 He was the eldest son of Vincenzo de Bonajuti de Galilei a Florentine noble Notwithstanding his illustrious birth and descent it would seem that the home in which the great philosopher's childhood was spent was an impoverished one It was obvious at least that the young Galileo would have to be provided with some profession by which he might earn a livelihood From his father he derived both by inheritance and by precept a keen taste for music and it appears that he became an excellent performer on the lute He was also endowed with considerable artistic power which he cultivated diligently Indeed it would seem that for some time the future astronomer entertained the idea of devoting himself to painting as a profession His father however decided that he should study medicine Accordingly we find that when Galileo was seventeen years of age and had added a knowledge of Greek and Latin to his acquaintance with the fine arts he was duly entered at the University of Pisa AMONG the ranks of the great astronomers it would be difficult to find one whose life presents more interesting features and remarkable vicissitudes than does that of Galileo We may consider him as the patient investigator and brilliant discoverer We may consider him in his private relations especially to his daughter Sister Maria Celeste a woman of very remarkable character and we have also the pathetic drama at the close of Galileo's life when the philosopher drew down upon himself the thunders of the Inquisition The materials for the sketch of this astonishing man are sufficiently abundant We make special use in this place of those charming letters which his daughter wrote to him from her convent home More than a hundred of these have been preserved and it may well be doubted whether any more beautiful and touching series of letters addressed to a parent by a dearly loved child have ever been written An admirable account of this correspondence is contained in a little book entitled *The Private Life of Galileo* published anonymously by Messrs Macmillan in 1870 and I have been much indebted to the author of that volume for many of the facts contained in this chapter

Great Astronomers Robert Stawell Ball, 1895 *Great Astronomers* Robert Stawell Ball, 2024-11-24 Copernicus the astronomer whose discoveries make him the great predecessor of Kepler and Newton did not come from a noble family as certain other early astronomers have done for his father was a tradesman Chroniclers are however careful to tell us that one of his uncles was a bishop We are not acquainted with any of

those details of his childhood or youth which are often of such interest in other cases where men have risen to exalted fame It would appear that the young Nicolaus for such was his Christian name received his education at home until such time as he was deemed sufficiently advanced to be sent to the University at Cracow The education that he there obtained must have been in those days of a very primitive description but Copernicus seems to have availed himself of it to the utmost He devoted himself more particularly to the study of medicine with the view of adopting its practice as the profession of his life The tendencies of the future astronomer were however revealed in the fact that he worked hard at mathematics and like one of his illustrious successors Galileo the practice of the art of painting had for him a very great interest and in it he obtained some measure of success By the time he was twenty seven years old it would seem that Copernicus had given up the notion of becoming a medical practitioner and had resolved to devote himself to science He was engaged in teaching mathematics and appears to have acquired some reputation His growing fame attracted the notice of his uncle the bishop at whose suggestion Copernicus took holy orders and he was presently appointed to a canonry in the cathedral of Frauenburg near the mouth of the Vistula To Frauenburg accordingly this man of varied gifts retired Possessing somewhat of the ascetic spirit he resolved to devote his life to work of the most serious description He eschewed all ordinary society restricting his intimacies to very grave and learned companions and refusing to engage in conversation of any useless kind It would seem as if his gifts for painting were condemned as frivolous at all events we do not learn that he continued to practise them In addition to the discharge of his theological duties his life was occupied partly in ministering medically to the wants of the poor and partly with his researches in astronomy and mathematics His equipment in the matter of instruments for the study of the heavens seems to have been of a very meagre description He arranged apertures in the walls of his house at Allenstein so that he could observe in some fashion the passage of the stars across the meridian That he possessed some talent for practical mechanics is proved by his construction of a contrivance for raising water from a stream for the use of the inhabitants of Frauenburg Relics of this machine are still to be seen The intellectual slumber of the Middle Ages was destined to be awakened by the revolutionary doctrines of Copernicus It may be noted as an interesting circumstance that the time at which he discovered the scheme of the solar system has coincided with a remarkable epoch in the world's history The great astronomer had just reached manhood at the time when Columbus discovered the new world Before the publication of the researches of Copernicus the orthodox scientific creed averred that the earth was stationary and that the apparent movements of the heavenly bodies were indeed real movements Ptolemy had laid down this doctrine 1 400 years before In his theory this huge error was associated with so much important truth and the whole presented such a coherent scheme for the explanation of the heavenly movements that the Ptolemaic theory was not seriously questioned until the great work of Copernicus appeared No doubt others before Copernicus had from time to time in some vague fashion surmised with more or less plausibility that the sun

Great Astronomers Robert Stawell Ball, 2024-11-24 IT was just a year after the death of Galileo that an infant came into the world who was christened Isaac Newton Even the great fame of Galileo himself must be relegated to a second place in comparison with that of the philosopher who first expounded the true theory of the universe Isaac Newton was born on the 25th of December old style 1642 at Woolsthorpe in Lincolnshire about a half mile from Colsterworth and eight miles south of Grantham His father Mr Isaac Newton had died a few months after his marriage to Harriet Ayscough the daughter of Mr James Ayscough of Market Overton in Rutlandshire The little Isaac was at first so excessively frail and weakly that his life was despaired of The watchful mother however tended her delicate child with such success that he seems to have thriven better than might have been expected from the circumstances of his infancy and he ultimately acquired a frame strong enough to outlast the ordinary span of human life For three years they continued to live at Woolsthorpe the widow s means of livelihood being supplemented by the income from another small estate at Sewstern in a neighbouring part of Leicestershire In 1645 Mrs Newton took as a second husband the Rev Barnabas Smith and on moving to her new home about a mile from Woolsthorpe she entrusted little Isaac to her mother Mrs Ayscough In due time we find that the boy was sent to the public school at Grantham the name of the master being Stokes For the purpose of being near his work the embryo philosopher was boarded at the house of Mr Clark an apothecary at Grantham We learn from Newton himself that at first he had a very low place in the class lists of the school and was by no means one of those model school boys who find favour in the eyes of the school master by attention to Latin grammar Isaac s first incentive to diligent study seems to have been derived from the circumstance that he was severely kicked by one of the boys who was above him in the class This indignity had the effect of stimulating young Newton s activity to such an extent that he not only attained the desired object of passing over the head of the boy who had maltreated him but continued to rise until he became the head of the school The play hours of the great philosopher were devoted to pursuits very different from those of most school boys His chief amusement was found in making mechanical toys and various ingenious contrivances He watched day by day with great interest the workmen engaged in constructing a windmill in the neighbourhood of the school the result of which was that the boy made a working model of the windmill and of its machinery which seems to have been much admired as indicating his aptitude for mechanics We are told that Isaac also indulged in somewhat higher flights of mechanical enterprise He constructed a carriage the wheels of which were to be driven by the hands of the occupant while the first philosophical instrument he made was a clock which was actuated by water He also devoted much attention to the construction of paper kites and his skill in this respect was highly appreciated by his schoolfellows Like a true philosopher even at this stage he experimented on the best methods of attaching the string and on the proportions which the tail ought to have He also made lanthorns of paper to provide himself with light as he walked to school in the dark winter mornings **Greatest Astronomers** R.S.
