Great Bear Almanac

Robert H. Busch

Great Bear Almanac:

The Great Bear Almanac Gary Brown,1993 A complete factual compendium of knowledge about bears presented in words pictures maps and charts **The Bear Almanac, 2nd** Gary Brown,2013-12-03 The bears of the world from the polar bears of the Arctic to the Andean bear of South America are among the most studied and loved of all wild creatures In this revised and updated edition Gary Brown collects what is known about the world s bears capturing in words and images a complete factual compendium of bear knowledge for the amateur naturalist and the bear specialist alike The Bear Almanac is for anyone who has ever paused to wonder at both the might and the mind of the bear Beyond their well known imposing physical traits these generally shy creatures command the ability to learn rapidly and to reason In addition to addressing such topics as bear physiology social behavior and habitats this comprehensive resource lists endangered bears by state and covers a breadth of other bear related topics such as the effects of war on bears and what to do if you meet up with one as well as issues in the news related to the most beloved and mysterious of creatures *The Grizzly Almanac* Robert H. Busch,2000 In his eighth book on natural history Busch takes on the 500 pound predator that lives among other places in his own stomping grounds of central British Columbia REED's 2009 East Coast Almanac , Brown's Nautical Almanac R. Ingram-Brown,1858 **"The" British Almanac ... Containing the Calendar of Remarkable Days and Terms ... Remarks on the Weather ... Astronomical Facts and Phenomena ...** ,1835 *North American Predators* , **Mark of the Grizzly** Scott Mcmillan,2011-11-08 A must read about these magnificent but sometimes deadly creatures thoroughly revised expanded and updated **Urban Wildlife Management, Second Edition** Clark E. Adams,2012-06-15 When the first edition of Urban Wildlife Management was published two years ago it provided conservationists ecologists and wildlife professionals with a welcome shift in the way that interactions between humans and wildlife were viewed and managed Instead of focusing on ways to evict or eradicate wildlife encroached on by urban development this unique work took a holistic ecosystems approach Gathering information from more than five hundred academic sources and the popular media this book educated us on the complete nature of the problem See what s new in the Second Edition New information garnered from secondary data sets Added contributions from an extended list of leading wildlife specialists Original research conducted by the authors and their students New chapters on urban soils urban waters and zoonotic diseases More perspective essays and case studies Single species profiles in each chapter that focus on management issues Numerous tables examining trends by species and by region Through discussions of past and present approaches in the United States the book explores the changing landscape of wildlife management and future approaches Urban habitats and hazards are defined in terms of green and gray spaces Sociopolitical issues are discussed in terms of wildlife management stakeholder responsibilities and legal considerations And wildlife are viewed as adaptive inhabitants of an evolving ecosystem rather than as interlopers in a humans only world The author maintains a blog exploring wildlife in our own backyard Among

Grizzlies Timothy Treadwell, Jewel Palovak, 1999-02-02 Living with Wild Bears in Alaska A heart stopping eco adventure a testimony to both the grizzlies and their courageous protector People The grizzly bear is one of a very few animals remaining on earth that can kill a human in physical combat It can decapitate with a single swipe or grotesquely disfigure a person in rapid order Within the last wilderness areas where they dwell they are the undisputed king of all beasts I know this very well My name is Timothy Treadwell and I live with the wild grizzly After Timothy Treadwell nearly died from a heroin overdose he sought healing far from the trappings of civilization among wild grizzlies on the remote Alaskan coast Without gun two way radio or experience living in the wild armed only with the love and respect he felt for these majestic animals Treadwell set up camp surrounded by one of nature s most terrifying and fascinating forces of nature Here is the story of his astonishing adventures with grizzlies soothing aggressive adolescents facing down thousand pound males swimming with mothers and cubs surviving countless brushes with death earning their trust and acceptance In these incredible pages Treadwell lives a life no human has ever attempted and ultimately saves his own To share his experience is awesome harrowing and unforgettable LIKE AFRICA NATURALIST JANE GOODALL TREADWELL GIVES PERSONAL NAMES TO HIS SUBJECTS Bears have distinct personalities Treadwell shows and as a group individual roles become clearly defined by gender size and age The Seattle Times With twenty nine photographs **Literary Animal Studies in the Anthropocene** Jiang

Lifu, 2022-08-08 In 2000 the Nobel Prize winning chemist Paul J Crutzen and marine science specialist Eugene Stoermer coined the term Anthropocene based on the assumption that the global impacts of human activities during the last 300 years are so significant and far reaching in scale that they lead to a new geological epoch The Anthropocene is adopted to signify the epoch subsequent to the Holocene in which human actions are shaping the planet so profoundly that they are now acting as a geological force In this era human activity is the dominant influence on the environment and all lives on earth This is the age we are currently living in though debates about precisely when it began continue to rage The term has not as yet officially accepted within the field of geology however as a frame for understanding a period of geological time marked by the significant impact of human activity on the planet the Anthropocene has extraordinary potential and it is a unique term simultaneously oriented to the past present and future Human Animal viii As Morten T nnessen Kristin Armstrong Oma argued no matter what one thinks about the Anthropocene the notion radically changes how we look at nature and mankind viii *Monster of God* David Quammen, 2003 For millennia lions tigers and their man eating kin have kept our dark scary forests dark and scary and their predatory majesty has been the stuff of folklore But by the year 2150 big predators may only exist on the other side of glass barriers and chain link fences Their gradual disappearance is changing the very nature of our existence We no longer occupy an intermediate position on the food chain instead we survey it invulnerably from above so far above that we are in danger of forgetting that we even belong to an ecosystem Casting his expert eye over the rapidly diminishing areas of wilderness where predators still reign the award winning author of *The Song of the Dodo* examines the

fate of lions in India's Gir forest of saltwater crocodiles in northern Australia of brown bears in the mountains of Romania and of Siberian tigers in the Russian Far East In the poignant and troublesome ferocity of these embattled creatures we recognize something primeval deep within us something in danger of vanishing forever **Yeti** Daniel C. Taylor, 2018-02-15

As it turned out young Daniel never outgrew the enchantment of the mysterious Yeti the Abominable Snowman His search for the enigmatic creature of Himalayan legends spread over many decades from 1956 until 2015 Daniel C Taylor visited almost all valley systems in his quest to explain the Yeti's footprints But to his surprise solving the footprint mystery did not answer the Yeti question As his quest evolved Taylor went on to create two massive national parks around Mount Everest Equipped with abundant knowledge of the Himalaya Taylor tells a story that is captivating and full of surprises He looks back at his exploration of the 2 000 mile wide Himalaya and talks about bioresilience as a parallel dynamic to biodiversity thus widening the scope of our understanding of ecology Yeti The Ecology of a Mystery is the extraordinary story of one man's conservation impact and what it means for people to be part of the wild in today's increasingly tamed world Natural Grace William Dietrich, 2014-07-01

From the interactive clockwork world of geology tides Northwest weather and snow to the hidden roles of dirt stream life and mosses and lichens Pulitzer Prize winning writer William Dietrich explores the natural splendors of the Pacific Northwest His topics include alder and cedar jellyfish geoducks crabs and killer whales mosquitoes and spiders gulls crows and bald eagles and sea otters coyotes raccoons possums deer and cougars This informative and engaging selection of natural history essays is adapted from articles published in the Seattle Times magazine Pacific Northwest A native Washingtonian Dietrich has watched the Northwest double in population during his lifetime Our rapidly changing view of nature is an underlying theme throughout his wide ranging essays as is the timely and essential question of how best to share and conserve the natural world that drew us to the region in the first place Not a field guide nor an environmental policy book Natural Grace is intended as a primer for people who are curious about the environment they live in and the pressures upon it We only care about what we know says the author I've concluded that enthusiasm and commitment begin from learning just how marvelous this region is Passion has to precede purpose And there is much to marvel over Dietrich has unearthed fascinating and unexpected facts about his subjects and he has a gift for expressing complex information in clear and vivid language He asks intriguing questions and makes good use of interviews with Northwest scientists and experts to convey current and historic attitudes and economic realities and to consider where we go from here For more information about the author go to <http://www.williamdietrich.com>

The Ghost with Trembling Wings Scott Weidensaul, 2003-06-11

The naturalist author of Living on the Wind Across the Hemisphere with Migratory Birds shares stories of the rediscovery of species previously believed extinct discussing such topics as the Indian forest owlet the thylacine of Tasmania cloning laboratories and the mysterious black panthers of England **Backtracking** Benjamin Long, 2004-06-28 With a spirit of exploration rarely seen in modern times Ben Long and his wife Karen Nichols quit their jobs sold their house and set out to

follow in the footsteps of Meriwether Lewis and William Clark Their quest To look at the plants and animals encountered during the Corps of Discovery s great endeavor and report on how nature is doing after two centuries of civilization Long s voice is appealing and readers will have no trouble imagining themselves traveling along with the couple in their fully loaded Subaru Long and Nichols drove from Montana to the Pacific checking on Lewis and Clark s natural discoveries along the way prairie dogs cutthroat trout sharptail grouse coyotes beavers bison grizzlies whitebark pine even a dinosaur fossil

Everywhere they encounter another persistent force of nature human nature This highly readable travelogue is informed by humor history the sacred journals of Lewis and Clark and the vivid experience of discovery **The Bombay Calendar and**

Almanac ,1853 **Bears** Kevin Van Tighem,2013-05-13 Fear of bears seems almost to be part of what it is to be human Our species emerged out of the depths of time into a world already populated by these great carnivores Before we mastered iron and later developed firearms we had few defences against bears only watchful caution and elaborate ceremonies and sacrifices to ward off fear Where human populations grow bears have traditionally dwindled or disappeared But when we return to the wild to places where bears still survive all our primeval fears awaken again The risk of an automobile accident on the way to bear country far outstrips the risk of a close range encounter with a bear but it s the bear that worries us as we hurtle down the pavement at a hundred kilometres an hour In this timely and sensitive book Kevin Van Tighem calls on decades of experience knowledge and understanding in order to enlighten readers about our relationship with and attitude toward bears Along the way we are confronted with the realities confronting these great animals as a result of our ever expanding human population and their ever shrinking natural habitat Through historical research field observation practical advice personal anecdotes and an array of stunning photos Van Tighem has written a comprehensive book that is meant to demystify bears in order to promote a deeper understanding of these powerful yet vulnerable creatures **Divine Rainbow**

M. Heydt,2007-03 In this uplifting book Louise Heydt weaves together a one year cycle of nature in a small valley in the Tecolote Mountains east of Pecos New Mexico and an inspirational spiritual journey as taught by nature The land and the spiritual path are interconnected the outer landscape of nature is the guide for the journey through the inner landscape The reader is shown how to find sacred places in the land and how these places are a gateway or threshold for quiet observation and meditation The realm of mystical experiences can be explored while in the embrace of nature The book also shows that it is a contemporary delusion that humans and nature are separate and how in the process of immersing oneself into experiences in nature one nourishes his or her inner nature In the process of this nurturing a spiritual awakening begins in which one also learns the power of prayer thus bringing to light one s intimate relationship with the Divine **Folk**

Mammalogy of the Northern Pimans Amadeo M. Rea,2016-12-15 Knowledge held about animals by Pima speaking Native Americans of Arizona and northwest Mexico is intimately entwined with their way of life a way that is fading from memory as beavers and wolves vanish also from the Southwest Ethnobiologist Amadeo Rea has conducted extensive fieldwork among

the Northern Pimans and here shares what these people know about mammals and how mammals affect their lives Rea describes the relationship of the River Pima Tohono O odham Papago Pima Bajo and Mountain Pima to the furred creatures of their environment how they are named and classified hunted prepared for consumption and incorporated into myth He also identifies associations between mammals and Piman notions of illness by establishing correlations between the geographical distribution of mammals and ideas regarding which animals do or do not cause staying sickness This information reveals how historical and ecological factors can directly influence the belief systems of a people At the heart of the book are detailed species accounts that relate Piman knowledge of the bats rabbits rodents carnivores and hoofed mammals in their world encompassing creatures ranging from deer mouse to mule deer cottontail to cougar Rea has been careful to emphasize folk knowledge in these accounts by letting the Pimans tell their own stories about mammals as related in transcribed conversations This wide reaching study encompasses an area from the Rio Yaqui to the Gila River and the Gulf of California to the Sierra Madre Occidental and incorporates knowledge that goes back three centuries Folk Mammalogy of the Northern Pimans preserves that knowledge for scholars and Pimans alike and invites all interested readers to see natural history through another people s eyes
