Smith, George B. Stefano, 2012-12-06 This book provides an updated overview of a rapidly developing and exciting area of investigation dealing with the role of neuropeptides in immunoregulatory processes Existing texts focus on the bidirectional exchange of signals among the nervous endocrine and immune systems in mammals carried out primarily by the enkephalin and proopiomelanocortin families of neuropeptides and lymphokines This collection of material is the first one to include pertinent information obtained in invertebrates which has considerably advanced our knowledge of the role of opioid neuropeptides especially in another activity of the immune system that of autoregulation The study and interpretation of the remarkable parallelisms between these phenomena observed in invertebrates and vertebrates bring new insight into the mechanisms of neuroimmunobiological integration with both general biological and clinical implications **Molecular Immunological Considerations in Malaria Vaccine Development** Michael F. Good, Allan J. Saul, 1993-10-13 Some of the world's leading research scientists in the field have contributed to this new book on malaria vaccine development The book examines various strategies being pursued against the different stages of the parasite the sporozoite asexual erythrocytic stages and sexual stages It describes vaccines that combat the parasite directly vaccines aimed at preventing disease vaccines based on attenuated parasites and vaccines based on small carefully defined synthetic peptides The book provides a compendium of current approaches lists of preferred antigens and the results of vaccine trials to date Molecular immunology involved with both the natural immune response to parasites and with the constraints on inducing immunity are emphasized throughout the book Views on how vaccines may be tested and then integrated into malaria control programs are also discussed Molecular Immunological Considerations in Malaria Vaccine Development will be useful for researchers and students in immunology parasitology biotechnology vaccine design and tropical and public health Signal Transduction in Leukocytes Pramod M. Lad, John S. Kaptein, Ching-Kow Lin, 1995-11-27 Signal Transduction in Leukocytes presents important principles and various aspects of cellular regulation in leukocytes The book discusses receptor structure and signaling emphasizing cytokine receptors and the T cell and B cell antigen receptors It investigates the role of the heterotrimeric G proteins and small G proteins as transducers Authorities in each field cover a wide range of topics They explore propagation of signaling cascades through second messengers and serine threonine kinases the initiation of signaling from the B and T cell antigen receptors by tyrosine phosphorylation and protein recruitment and the role of signaling in cell cell interactions and the regulation of the cell cycle The book outlines the relationship of receptor signaling to inflammatory reactions of neutrophils eosinophils and macrophages Human Basophils and Mast Cells: Biological Aspects G.
