Natural Language at the Computer Albrecht Blaser, 1988 Volume 19 of Group III Crystal and Solid State Physics deals with the magnetic properties of metals alloys and metallic compounds The amount of information available in this field is so substantial that several subvolumes are needed to cover it all The first subvolumes treat the intrinsic magnetic properties i e those magnetic properties which depend only on the chemical composition and the crystal structure So far subvolumes III 19a III 19b and III 19c have appeared Data on the properties that depend on the preparation of the samples measured as for instance thin films or amorphous alloys and the magnetic alloys used in technical applications are being compiled in the last subvolumes of III 19 In the first of these subvolume III 19g magnetic properties are given for several major types of crystalline and amorphous thin magnetic films that are supported by a substrate and for which a more or less coherent group of data is available The properties of sputtered metallic amorphous films containing 3d transition elements will be dealt with in the following subvolume

Inversion and Source-to-source Translation Daniel M. Yellin,1988-04-15 With the proliferation of computer languages and dialects it is important to create tools to aid in the construction of source to source translators By allowing users to make use of software or data written for another system these tools form an important component in the quest for software reusability After discussing the theoretical and practical issues of attribute grammar inversion this book demonstrates how the technique can be used to build source to source translators This is done by first identifying a common canonical form in which to represent the various source languages and then writing attribute grammars from each source to the canonical form By automatically inverting these attribute grammars one obtains translators from the canonical form back to each source language and by composing the appropriate pairs of translators one obtains source to source translators To prove the feasibility of the inversion approach to source to source translation it has been used to generate translators between the
