**The Unknown Genius Creative Abilities of Leonardo Da Vinci** Dr. Rudy A. Magnan, 2020-10-01 This publication was written in the belief that Leonardo's study of his natural surroundings his advanced perceptual skills and his continued

interest in learning all played a significant role in developing his creativity He challenged established mindsets with the conviction that all earthly things are connected He spent years observing nature s secrets documenting his observations and the creative thinking that resulted While much has been written about Leonardo s incredible scientific discoveries his futuristic inventions and his great works of art we fail to realize that Leonardo da Vinci developed incredible creative thinking that needs to be understood and applied in this new creative paradigm where creative ideas are the currency of the future

*Sketches of Thought* Vinod Goel,1995 Much of the cognitive lies beyond articulate discursive thought beyond the reach of current computational notions In *Sketches of Thought* Vinod Goel argues that the cognitive computational conception of the world requires our thought processes to be precise rigid discrete and unambiguous yet there are dense ambiguous and amorphous symbol systems like sketching painting and poetry found in the arts and much of everyday discourse that have an important non trivial place in cognition Goel maintains that while on occasion our thoughts do conform to the current computational theory of mind they often are indeed must be vague fluid ambiguous and amorphous He argues that if cognitive science takes the classical computational story seriously it must deny or ignore these processes or at least relegate them to the realm of the nonmental Along the way Goel makes a number of significant and controversial interim points He shows that there is a principled distinction between design and nondesign problems that there are standard stages in the solution of design problems that these stages correlate with the use of different types of external symbol systems that these symbol systems are usefully individuated in Nelson Goodman s syntactic and semantic terms and that different cognitive processes are facilitated by different types of symbol systems
