Real-Time Massive Model Rendering Sung-eui Yoon, Enrico Gobbetti, David Kasik, Dinesh Manocha, 2008-08-08 Interactive display and visualization of large geometric and textured models is becoming a fundamental capability There are numerous application areas including games movies CAD virtual prototyping and scientific visualization One of observations about geometric models used in interactive applications is that their model complexity continues to increase because of fundamental advances in 3D modeling simulation and data capture technologies As computing power increases users take advantage of the algorithmic advances and generate even more complex models and data sets Therefore there are many cases where we are required to visualize massive models that consist of hundreds of millions of triangles and even billions of triangles However interactive visualization and handling of such massive models still remains a challenge in computer graphics and visualization In this monograph we discuss various techniques that enable interactive visualization of massive models These techniques include visibility computation simplification levels of detail and cache coherent data management We believe that the combinations of these techniques can make it possible to interactively visualize massive models in commodity hardware Table of Contents Introduction Visibility Simplification and Levels of Detail Alternative Representations Cache Coherent Data Management Conclusions Bibliography

Image-based Modeling of Plants and Trees Sing Bing Kang, Long Quan, 2010 Plants and trees are among the most complex natural objects Much work has been done attempting to model them with varying degrees of success In this book we review the various approaches in computer graphics which we categorize as rule based image based and sketch based methods We describe our approaches for modeling plants and trees using images Image based approaches have the distinct advantage that the resulting model inherits the realistic shape and complexity of a real plant or tree We use different techniques for modeling plants with relatively large leaves and trees with relatively small leaves With plants we model each leaf from images while for trees the leaves are only approximated due to their small size and large number Both techniques start with the same initial step of structure from motion on multiple images of the plant or tree that is to be modeled For our plant modeling system because we need to model the individual leaves these leaves need to be segmented out from the images We designed our plant modeling system to be interactive automating the process of shape recovery while relying on the user to provide simple hints on segmentation Segmentation is performed in both image and 3D spaces allowing the user to easily visualize its effect immediately Using the segmented image and 3D data the geometry of each leaf is then automatically recovered from the multiple views by fitting a deformable leaf model Our system also allows the user to easily reconstruct branches in a similar manner To model trees because of the large leaf count small image footprint and widespread occlusions we do not model the leaves exactly as we do for plants Instead we populate the tree with leaf replicas from segmented source images to reconstruct the overall tree shape In addition we use the shape patterns of visible branches to predict those of obscured branches As a result we are able to design our tree modeling system so as to minimize user intervention We also handle the special case of modeling a tree from only a single image Here the user is required to draw strokes on the image to indicate the tree crown so that the leaf region is approximately known and to refine the recovery of branches As before we concatenate the shape patterns from a library to generate the 3D shape To substantiate

the effectiveness of our systems we show realistic reconstructions of a variety of plants and trees from images Finally we offer our thoughts on improving our systems and on the remaining challenges associated with plant and tree modeling Table of Contents Introduction Review of Plant and Tree Modeling Techniques Image Based Technique for Modeling Plants Image Based Technique for Modeling Trees Single Image Tree Modeling Summary and Concluding Remarks Acknowledgments
