Morrison,2000-05-19 Monocots Systematics and Evolution presents leading work from around the world on non grass monocotyledons and includes reviews and current research into their comparative biology phylogeny and classification The papers are based on presentations at the Second International Conference on the Comparative Biology of the Monocotyledons Monocots II held in Sydney Australia in late 1998 Many were subsequently updated or extended to take into account new information All 72 papers have been peer reviewed **Grass Systematics and Evolution** ,1987 **Grass**

**Systematics and Evolution** Thomas R. Soderstrom,1987 This series aims to publish innovative works in the field of zoo and aquarium biology and conservation with priority given to books that focus on the interface between captive and field conservation and seek to merge theory with practice This volume summarizes the large body of research on grasses of the last quarter century and encompasses a wide range of topics from morphology to DNA **Abstracts** ,1986\*

*Reproductive Versatility in the Grasses* Geoffrey Peter Chapman,1990-11-30 This 1990 text brings together a detailed review by acknowledged authorities of grass reproductive biology Essential to contemporary awareness of grasses is an understanding of their role in sustaining ecologically fragile environments and the relative importance of annual and perennial reproduction is examined here **International Symposium on Grass Systematics and Evolution, 27-31 July**

**Plants** Armen Leonovich Takhtadzhian,1997 The culmination of more than fifty years of research by the foremost living expert on plant classification Diversity and Classification of Flowering Plants is an important contribution to the field of plant taxonomy In the last decade the system of classifying plants has been thoroughly revised Instead of describing every

individual family Takhtajan includes descriptions in keys to families which he calls descriptive keys The advantage of descriptive keys is that they give both the characteristic features of the families and their differences The delimitation of families and orders drastically differs from the one accepted by the Englerian school and from the one accepted in Arthur Cronquist's system Takhtajan favors the smaller more natural families and orders which are more coherent and better defined where characters are easily grasped and which are more suitable for information retrieval and phylogenetic studies including cladistic analysis because it reduces polymorphic codings *CRC World Dictionary of Grasses* Umberto Quattrocchi, 2006-04-26 2008 NOMINEE The Council on Botanical and Horticultural Libraries Annual Award for a Significant Work in Botanical or Horticultural Literature now we have easier and better access to grass data than ever before in human history That is a marked step forward Congratulazioni Professor Quattrocchi Daniel F Austin writing in *Economic Botany* n

**Identification Guide for Near Eastern Grass Seeds** Mark Nesbitt, 2016-09-16 Archaeobotanical studies constantly encounter the carbonized grains of grasses cultivated and wild but the vast diversity of wild species that are potentially present has made identification of archaeological material fraught with difficulties This volume provides an invaluable tool for mastering these difficulties Based on years of laboratory study of an extensive reference collection this book gives expert guidance for the identification and interpretation of grass seeds focusing on those species that occur in the Near East and Europe **Population Biology of Grasses** G. P. Cheplick, 1998-03-28 Dynamics **C4 Photosynthesis and Related CO2 Concentrating Mechanisms** Agepati S. Raghavendra, Rowan F. Sage, 2010-10-20 The C4 pathway of photosynthesis was discovered and characterized more than four decades ago Interest in C4 pathway has been sustained and has recently been boosted with the discovery of single cell C4 photosynthesis and the successful introduction of key C4 cycle enzymes in important crops such as rice Further cold tolerant C4 plants are at the verge of intense exploitation as energy crops Rapid and multidisciplinary progress in our understanding of C4 plants warrants a comprehensive documentation of the available literature The book which is a state of the art overview of several basic and applied aspects of C4 plants will not only provide a ready source of information but also triggers further research on C4 photosynthesis Written by internationally acclaimed experts it provides an authoritative source of progress made in our knowledge of C4 plants with emphasis on physiology biochemistry molecular biology biogeography evolution besides bioengineering C4 rice and biofuels The book is an advanced level textbook for postgraduate students and a reference book for researchers in the areas of plant biology cell biology biotechnology agronomy horticulture ecology and evolution *Genomics of the Saccharinae* Andrew H. Paterson, 2012-09-14 The Saccharinae clade of the Poaceae grass family of flowering plants includes several important crops with a rich history of contributions to humanity and the promise of still greater contributions as a result of some of the highest biomass productivity levels known resilience to drought and other environmental challenges that are likely to increase amenability to production systems that may mitigate or even reverse losses of ecological capital such as topsoil erosion and the recent

blossoming of sorghum as a botanical and genomic model for the clade In Genomics of the Saccharinae advances of the past decade and earlier are summarized and synthesized to elucidate the current state of knowledge of the structure function and evolution of the Sorghum Saccharum and Miscanthus genera and progress in the application of this knowledge to crop improvement As a backdrop it is important to understand the naturally occurring diversity in each genus its organization and distribution and its evolutionary history Genomic tools and methods for Saccharinae biology and improvement have improved dramatically in the past few years a detailed summary of these tools and their applications is a central element of this book Application of genomic tools to priorities in crop improvement including understanding and manipulating plant growth and development composition and defense as well as increasing the quality and productivity of seed grain sugar biomass and other value added products under a range of conditions and inputs are addressed In particular as the first native African crop to emerge as a genomic model sorghum offers an excellent case study of challenges and opportunities in linking new advances in biosciences to solving some of Africa s major agricultural problems Several members of the clade exemplified by Sorghum halepense Johnsongrass offer insights into weediness and invasion biology The first sequence for a member of the clade sorghum as well as progress and challenges toward sequencing of additional members and the new opportunities that this will create are also explored Indeed the very complexities that have hindered study of some clade members also offer intriguing opportunities to gain insight into fundamental questions such as roles of polyploidy in agricultural productivity and post polyploidy evolution

**Methods in Paleoeecology** Darin A. Croft, Denise F. Su, Scott W. Simpson, 2018-10-27 This volume focuses on the reconstruction of past ecosystems and provides a comprehensive review of current techniques and their application in exemplar studies The 18 chapters address a wide variety of topics that span vertebrate paleobiology and paleoeecology body mass postcranial functional morphology evolutionary dental morphology microwear and mesowear ecomorphology mammal community structure analysis contextual paleoenvironmental studies paleosols and sedimentology ichnofossils pollen phytoliths plant macrofossils and special techniques bone microstructure biomineral isotopes inorganic isotopes 3 D morphometrics and ecometric modeling A final chapter discusses how to integrate results of these studies with taphonomic data in order to more accurately characterize an ancient ecosystem Current investigators advanced undergraduates and graduate students interested in the field of paleoeecology will find this book immensely useful The length and structure of the volume also makes it suitable for teaching a college level course on reconstructing Cenozoic ecosystems

**Flora of Australia** Australian Biological Resources Study, 2002 An introduction to the Poaceae grasses Essays review Australian research on phylogeny classification anatomy physiology ecology palaeobotany and biogeography of Australian grasses There is also a detailed synopsis of the economic attributes of grasses on a genus by genus basis

**Flowering Plants. Monocots** Elizabeth A. Kellogg, 2015-05-18 This volume is the outcome of a modern phylogenetic analysis of the grass family based on multiple sources of data in particular molecular systematic studies resulting from a concerted effort by

researchers worldwide including the author In the classification given here grasses are subdivided into 12 subfamilies with 29 tribes and over 700 genera The keys and descriptions for the taxa above the rank of genus are hierarchical i e they concentrate upon characters which are deemed to be synapomorphic for the lineages and may be applicable only to their early diverging taxa Beyond the treatment of phylogeny and formal taxonomy the author presents a wide range of information on topics such as the structural characters of grasses their related functional aspects and particularly corresponding findings from the field of developmental genetics with inclusion of genes and gene products instrumental in the shaping of morphological traits in which this volume appears unique within this book series further topics addressed include the contentious time of origin of the family the emigration of the originally shade loving grasses out of the forest to form vast grasslands accompanied by the switch of many members to C4 photosynthesis the impact of herbivores on the silica cycle housed in the grass phytoliths the reproductive biology of grasses the domestication of major cereal crops and the affinities of grasses within the newly circumscribed order Poales This volume provides a comprehensive overview of existing knowledge on the Poaceae Gramineae with major implications in terms of key scientific challenges awaiting future research It certainly will be of interest both for the grass specialist and also the generalist seeking state of the art information on the diversity of grasses the most ecologically and economically important of the families of flowering plants

*Wild and Sown Grasses* Alain Peeters, 2004-01-01 With the intensification of agriculture during the last century the number of grass species was reduced and a small number have come to dominate the grasslands and the seed market This publication profiles 43 grass species sown or naturally present in temperate grasslands many of which are regaining importance in the context of agricultural intensification Each profile includes illustrations and a description of the plant its ecological requirements agronomic characteristics and uses The publication also contains chapters on the importance and diversity of grasses and grass communities diversity of grass use morphology and physiology of grasses advantages of wild or secondary grasses and complex multispecies and multivariety mixtures prospects for wild and little selected species
