Gravitational Force Of The Sun

Kshudiram Saha

Gravitational Force Of The Sun:

Gravitational Force of the Sun Pari Spolter,1993 *The Earth's Atmosphere* Kshudiram Saha,2008-05-14 The author has sought to incorporate in the book some of the fundamental concepts and principles of the physics and dynamics of the atmosphere a knowledge and understanding of which should help an average student of science to comprehend some of the great complexities of the earth atmosphere system in which a thr way interaction between the atmosphere the land and the ocean tends to maintain an overall mass and energy balance in the system through physical and dynamical processes The book divided into two parts and consisting of 19 chapters introduces only those aspects of the subject that according to the author are deemed essential to meet the objective in view The emphasis is more on clarity and understanding of physical and dynamical principles than on details of complex theories and ma ematics Attempt is made to treat each subject from rst principles and trace its development to present state as far as possible However a knowledge of basic c culus and differential equations is sine qua non especially for some of the chapters which appear later in the book *The Evolution of Earth's Climate* J. O. Robertson,G. V. Chilingar,O. G. Sorokhtin,N. O. Sorokhtin,W. Long,2018-06-12 Written by a group of the most experienced and well known environmental engineers in the world from a unique perspective this volume explores the hot button issue of climate change its causes and the future of the planet Climate change is one of the most controversial and argued issues in the world today and it has been for years It has been politicized by politicians on all sides some scientists have used the study of it for their own material gain above true scientific discovery and some scientific theories surrounding it have been believed even though proven false But there is not by any means complete agreement among all scientists throughout the world on this issue Written by two of the world s most well respected environmental and petroleum engineers this book is meant to be one voice in the scientific literature on this important subject Other books also available from Wiley Scrivener take the opposite stance but it is important in our scientific journey to listen to all voices and rely on facts rather than opinions We trust the reader to make his or her decisions based on all of the facts and not just some of them [From the sun's energy source to the formation of the solar system](#) Dan Bar-Zohar,2006-12-04 The latest observation of hundreds of exoplanets and the discovery of supermassive black hole at the center of many galaxies set the foundation for the theory presented in this book The theory suggest that the sun and stars energy source is not from fusion but instead from magnetic fields spreads in the galaxy by the supermassive black hole at the center of every galaxy This idea changes every aspect of astronomy and cosmology The big bang is no longer necessary to explain the source of the mass in the universe and the expansion of the universe According to this theory the matter in the universe is created in the cores of stars by conversion of energy to mass The expansion of the universe is induced by the rapid formation of new galaxies Stars grow slowly and gradually over tens of billion of years by conversion of energy to mass The gradual growth of stars and the planet search programs that found hundreds of nearby planets indicate that stars are born from planets This invalidates the solar nebula

hypothesis as the source of the stars and the solar system Stars fluctuate from a main sequence state to a red giant state They stay in the main sequence when they receive strong magnetic fields and they turn into a red giant when the magnetic fields are weakened The sun also fluctuated from a main sequence to a red giant When the sun was a red giant it had strong solar wind that supplied the material to create the planets The solar system contains hard evidence that the sun was a red giant those are short lived isotopes and chondrules The fact that there is hard evidence to a red giant sun confirms this theory Highlights of this theory include the following 1 The sun energy source is from magnetic fields from the galactic center 2 The heat induced by the magnetic fields leads to high energy collision between particles in the sun core that creates new particles and increases the sun mass 3 All the stars in the galaxy create new mass so the total mass and the size of the galaxy is increasing 4 The stars in the galaxy eject dust that freefall to the galactic center supermassive black hole Thorough the dynamo effect the gravitational potential energy of the debris and dust is converted to magnetic fields 5 As the galaxy mass and size increase globular clusters are detached from the main galaxy to create new galaxies 6 Galaxies spawn new galaxies and the total number of galaxies in the universe increase 7 The universe expands and accelerates from the increase in the number of the galaxies 8 The Big Bang cosmological model is replaced by a new cosmological model that resembles the steady state theory 9 Stars grow gradually from conversion of energy to mass 10 Stars are born from planets they first grow by accretion and then by conversion of energy to mass 11 Stars fluctuate from main sequence to a red giant When the magnetic fields are strong the star is in the main sequence when the magnetic fields are weakened the star turns to a red giant 12 The sun was a red giant 4.6 billions years ago 13 The planets were created from the strong solar wind of the red giant sun

Axiomatized Wang Jianhua, 2025-03-24 At the beginning of the 20th century the world famous mathematician Hilbert suggested deducing all the theorems of physics using mathematical axiomatization However for more than 100 years mathematicians and physicists have not accomplished this great scientific dream Many people are skeptical about the suggestion of axiomatizing physics The author has established a new axiomatic system of physics consisting of six axioms based on physical experiments Many famous theorems of physics can be deduced from the new axiomatic system For example 1 The new universal gravitation formula viz 2 A new formula for the magnetic field force viz In addition the authors have designed three very simple optical experiments based on the principle of lasers and the theory of interference of light which will directly verify whether the principle of special relativity of the invariance of the speed of light is correct or incorrect
