**Gray Wolf, Red Wolf** Dorothy Hinshaw Patent,1994-04 A fascinating fact filled book on endangered gray and red wolves Amply illustrated with handsome photographs It may never be possible to reconcile human greed with a harmonious natural ecology but the respectful account of endangered wolves suggests that the effort is eminently worthwhile The Horn Book Full color photos

**Gray Wolf, Red Wolf** Dorothy Hinshaw Patent,1990 Describes the physical characteristics life cycle and behavior of the two species of wolves found in North America and discusses efforts to save them from extinction by reintroducing them to wilderness areas

**The Secret World of Red Wolves** T. DeLene Beeland,2013-06-10 Red wolves are shy elusive and misunderstood predators Until the 1800s they were common in the longleaf pine savannas and deciduous forests of the southeastern United States However habitat degradation persecution and interbreeding with the coyote nearly annihilated them Today reintroduced red wolves are found only in peninsular northeastern North Carolina within less than 1 percent of their former range In The Secret World of Red Wolves nature writer T DeLene Beeland shadows the U S Fish and Wildlife Service s pioneering recovery program over the course of a year to craft an intimate portrait of the red wolf its history and its restoration Her engaging exploration of this top level predator traces the intense effort of conservation personnel to save a species that has slipped to the verge of extinction Beeland weaves together the voices of scientists conservationists and local landowners while posing larger questions about human coexistence with red wolves our understanding of what defines this animal as a distinct species and how climate change may swamp its current habitat

Evaluating the Taxonomic Status of the Mexican Gray Wolf and the Red Wolf National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Board on Agriculture and Natural Resources,Board on Life Sciences,Committee on Assessing the Taxonomic Status of the Red Wolf and the Mexican Gray Wolf,2019-06-01 Scientists strive to develop clear rules for naming and grouping living organisms But taxonomy the scientific study of biological classification and evolution is often highly debated Members of a species the fundamental unit of taxonomy and evolution share a common evolutionary history and a common evolutionary path to the future Yet it can be difficult to determine whether the evolutionary history or future of a population is sufficiently distinct to designate it as a unique species A species is not a fixed entity the relationship among the members of the same species is only a snapshot of a moment in time Different populations of the same species can be in different stages in the process of species formation or dissolution In some cases hybridization and introgression can create enormous challenges in interpreting data on genetic distinctions between groups Hybridization is far more common in the evolutionary history of many species than previously recognized As a result the precise taxonomic status of an organism may be highly debated This is the current case with the Mexican gray wolf *Canis lupus baileyi* and the red wolf *Canis rufus* and this report assesses the taxonomic status for each

**Wolf (Canis Rufus)** Glynn A. Riley, Roy T. McBride, 1972 This paper discusses the red wolf's *Canis rufus* status, distribution and ecology and describes and differentiates the red wolf from the closely related canids. Difficulties in distinguishing red wolves from coyotes *Canis latrans* and red wolf-coyote hybrids have resulted in much confusion over the range and status of the red wolf. *A Research Strategy to Examine the Taxonomy of the Red Wolf* National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Board on Life Sciences, Committee on Assistance to the U.S. Fish and Wildlife Service on Taxonomic Studies of the Red Wolf: A Review of Applications to Carry Out Research and Development of a Research Strategy, 2020-12-29. A Research Strategy to Examine the Taxonomy of the Red Wolf provides independent guidance about taxonomic research on the red wolf *Canis rufus*. Building from the 2019 report *Evaluating the Taxonomic Status of the Mexican Gray Wolf and the Red Wolf*, this report reviews and ranks research applications to determine the taxonomy of wild canid populations in southern Louisiana and other relevant locations. The report then develops a research strategy to examine the evolutionary relationships between ancient red wolves, the extant managed red wolf populations, and the unidentified canid populations. **North American Wolves** Barbara Keevil Parker, 1998-01-01 Examines the physical characteristics, behavior, and life cycle of the gray wolf and the red wolf.

*Evaluating the Taxonomic Status of the Mexican Gray Wolf and the Red Wolf* National Academies of Sciences, Engineering, and Medicine (U.S.). Committee on Assessing the Taxonomic Status of the Red Wolf and the Mexican Gray Wolf, 2019. Scientists strive to develop clear rules for naming and grouping living organisms. But taxonomy, the scientific study of biological classification and evolution, is often highly debated. Members of a species share a common evolutionary history and a common evolutionary path to the future. Yet it can be difficult to determine whether the evolutionary history or future of a population is sufficiently distinct to designate it as a unique species. A species is not a fixed entity; the relationship among the members of the same species is only a snapshot of a moment in time. Different populations of the same species can be in different stages in the process of species formation or dissolution. In some cases, hybridization and introgression can create enormous challenges in interpreting data on genetic distinctions between groups. Hybridization is far more common in the evolutionary history of many species than previously recognized. As a result, the precise taxonomic status of an organism may be highly debated. This is the current case with the Mexican gray wolf *Canis lupus baileyi* and the red wolf *Canis rufus*, and this report assesses the taxonomic status for each. Publisher's description.

Gray Wolf and Red Wolf Ludwig Norbert Carbyn, 1986\* **A Report on the Taxonomic Status and Distribution of the Red Wolf** John L. Paradiso, Ronald M. Nowak, 1972. Comparison of 213 skulls of *Canis rufus* with 214 *C. lupus* and 335 *C. latrans* indicate that the red wolf is a distinct species. Before human disruption of the environment, *rufus*, *lupus*, and *latrans* maintained their distinct status, and available specimens show no evidence that the red wolf intergraded with either coyote or gray wolf. A series of 71 skulls shows a complete variation from typical *rufus* to typical *latrans*. Apparently, modification and

decline of the red wolf population led to the breakdown of isolation and the formation of a hybrid swarm that suggests possible interbreeding with the coyote. Specimens indicate that as red wolves were extirpated in eastern Texas and elsewhere a hybrid swarm moved eastward to occupy the niche that was created. By 1969 the swarm spread throughout most of eastern Texas and moved into Louisiana. Pure red wolves continued to survive only in a limited area along the Gulf Coast from Brazoria Counties Texas and in Cameron Parish.
