Atlas of Cutaneous Branch Territories for the Diagnosis of Neuropathic Pain Claude J. Spicher, Tara L. Packham, Nadège Buchet, Isabelle Quintal, Pierre

Sprumont, 2020-09-24 This atlas is the result of research involving over 3 000 patients consecutively recruited since 2004

Clinical practice gives the opportunity to observe many more A axonal lesions axonotmesis than transections neurotmesis consequently the mapped hypo aesthetic territories are partial Therefore the authors define for each cutaneous nerve branch the autonomous territory and the boundary markers of the largest territory of cutaneous origin Each anatomical chart of a cutaneous branch is the superposition of tens even hundreds of observations seen in clinical practice based on 3 133 maps of observed cutaneous hypoaesthetic territories The data collected has also been cross referenced with that published in nearly 100 other anatomy books This 1st English edition based on the 3rd French edition published by Sauramps Medical illustrates the usefulness of anatomical knowledge for clinical practice More precisely it seeks to demonstrate how these topographic elements can offer valuable support both for the clinical anamnesis and for the clinical examination of neuropathic pain patients This atlas is at the crossroads between the medical and rehabilitation disciplines Accordingly it addresses the needs of medical doctors from GPs to specialists and of pain therapists and offers a valuable asset for all health professionals who are dedicated to the management of pain and associated problems
