Milchunas, 2006 *Upper Rio Grande Basin Water Operations Review* ,2007 *Hydrologic Processes in the Pinyon-juniper Woodlands* Peter F. Ffolliott, 2012 Hydrologic processes in the pinyon juniper woodlands of the western region of the United States are variable because of the inherent interactions among the occurring precipitation regimes geomorphological settings and edaphic conditions that characterize the ecosystem A wide range of past and present land use practices further complicates comprehensive evaluations of these hydrologic processes Heterogeneous vegetative covers make it even more difficult to generalize hydrologic processes and the effects of land management practices on the water balance Nevertheless estimates of interception infiltration evapotranspiration soil moisture storage and hillslope soil erosion of these on site hydrologic processes have been obtained in plot studies Estimates of off site streamflow volumes sediment yields and transport and quality of streamflow water are available from the results of watershed level investigations Estimates of these respective hydrologic processes are presented

New Mexico State Office,2000 Documents the effects of adopting standards for public land health and guidelines for livestock grazing management on Bureau of Land Management BLM administered land in New Mexico The standards and guidelines would be incorporated into eight BLM resources management plans RMP that cover approximately 13 5 million acres In addition for each alternative there are existing land use decisions that are in conformance with the standards These decisions would be changed to bring them into conformance Page xiii Agricultural Conservation Practices and Related Issues ,2004

Water Ethics David Groenfeldt,2013-10-01 This book introduces the idea that ethics are an intrinsic dimension of any water policy program or practice and that understanding what ethics are being acted out in water policies is fundamental to an understanding of water resource management Thus in controversies or conflicts over water resource allocation and use an examination of ethics can help clarify the positions of conflicting parties as preparation for constructive negotiations The author shows the benefits of exposing tacit values and motivations and subjecting these to explicit public scrutiny where the values themselves can be debated The aim of such a process is to create the proverbial level playing field where values favoring environmental sustainability are considered in relation to values favoring short term exploitation for quick economic stimulus the current problem or quick protection from water disasters through infrastructure which science suggests is not sustainable The book shows how new technologies such as drip irrigation or governance structures such as river basin organizations are neither good nor bad in their own right but can serve a range of interests which are guided by ethics A new ethic of coexistence and synergies with nature is possible but ultimately depends not on science law or finances but on the values we choose to adopt The book includes a wide range of case studies from countries including Australia India Philippines South Africa and USA These cover various contexts including water for agriculture urban domestic and industrial use the rights of indigenous people and river watershed and ecosystem management **Silviculture in Special Places**

,2004 City of Albuquerque Drinking Water Project ,2004 *Ecological Foundations for Fire Management in North American Forest and Shrubland Ecosystems* J. E. Keeley,2011-05 Provides an ecological foundation for mgmt of the diverse ecosystems and fire regimes of N America based on scientific principles of fire interactions with vegetation fuels and biophysical processes Detailed discussion of six ecosystems ponderosa pine forest western N America chaparral Calif boreal forest Alaska and Canada Great Basin sagebrush inter mountain West pine and pine hardwood forests Southern Appalachian Mountains and longleaf pine Southeastern U S illustrates the complexity of fire regimes and that fire mgmt requires a clear regional focus that recognizes where conflicts might exist between fire hazard reduction and resource needs Illustrations This is a print on demand report
