It presents conceptual aspects of decision support applications in various areas including finance, vendor selection, construction, process management, water management and energy, agribusiness, production scheduling and control and waste management. In addition to this, a special focus is given to methods of multi-criteria decision analysis. Decision making in organizations is a recurrent theme and is essential for business continuity. Consequently, managers need the support of these structured methods in order to engage in effective decision making. This book provides a valuable resource for graduate students, professors and researchers of decision analysis, multi-criteria decision analysis and group decision analysis. It is also intended for production engineers, civil engineers and engineering consultants. *Engineering Managerial Economic Decision and Risk Analysis* Teddy Steven Cotter, 2021-11-18 This book directs the engineering manager or the undergraduate student preparing to become an engineering manager who is or will become actively engaged in the management of economic risk trade-off decisions for engineering investments within an organizational system. In today's global economy, this may mean managing the economic risks of engineering investments across national boundaries in international organizations, government or service organizations. As such, this is an applied book. The book's goal is to provide an easy-to-understand, up-to-date and coherent treatment of the management of the economic risk trade-offs of engineering investments. This book accomplishes this goal by cumulatively sequencing knowledge content from foundational economic and accounting concepts to cost estimating to the traditional engineering economics knowledge culminating in fundamental engineering managerial economic decision making.
