**The Economics and Ecology of Biodiversity Decline** Timothy M. Swanson, 1998-06-25 Essays by economists and ecologists debate the causes and consequences of biodiversity decline Agrobiodiversity Conservation Nigel Maxted, 2012 Based on the 2010 conference Towards the establishment of genetic reserves for crop wild relatives and landraces in Europe this book is the cutting edge discussion of agrobiodiversity conservation By considering the benefits of understanding and preserving crop wild relatives and landraces it encompasses issues as wide ranging and topical as habitat protection ecosystem health and food security Focusing on Europe but globally relevant Agrobiodiversity Conservation is ideal for postgraduate students of conservation and environmental studies conservation professionals policy makers and researchers

**The Economics of Biodiversity Conservation** K. N. Ninan, 2012 Economic valuation of biodiversity and ecosystem services is possibly the most powerful tool for halting the loss of biodiversity while maintaining incomes and livelihoods Yet rarely have such approaches been applied to tropical forest hotspots which house the vast majority of the planets plant and animal species This ground breaking work is the most comprehensive and detailed examination of the economics of environmental valuation and biodiversity conservation to date Focusing on the Western Ghats of India one of the top biodiversity hotspots in the world this volume looks at a cross section of local communities living within or near sanctuaries and reserve forests such as coffee growers indigenous people and farmers cum pastoralists to assess the use and non use values that people derive from tropical forests It also looks at the extent of their dependence on forests for various goods and services and examines their perceptions and attitudes towards biodiversity conservation and wildlife protection The book concludes with an assessment of the institutional alternatives and policies for promoting biodiversity conservation through economic valuation methods Related titles Economics for Collaborative Environmental Management 2005 1 84407 095 6

*Handbook of Agricultural Economics* Bruce L. Gardner, Gordon C. *Nontimber Forest Products in the United States* Eric T. Jones, Rebecca Jean McLain, James F. Weigand, 2002 A quiet revolution is taking place in America s forests Once seen primarily as stands of timber our woodlands are now prized as a rich source of a wide range of commodities from wild mushrooms and maple sugar to hundreds of medicinal plants whose uses have only begun to be fully realized Now as timber

harvesting becomes more mechanized and requires less labor the image of the lumberjack is being replaced by that of the forager This book provides the first comprehensive examination of nontimber forest products NTFPs in the United States illustrating their diverse importance describing the people who harvest them and outlining the steps that are being taken to ensure access to them As the first extensive national overview of NTFP policy and management specific to the United States it brings together research from numerous disciplines and analytical perspectives such as economics mycology history ecology law entomology forestry geography and anthropology in order to provide a cohesive picture of the current and potential role of NTFPs The contributors review the state of scientific knowledge of NTFPs by offering a survey of commercial and noncommercial products an overview of uses and users and discussions of sustainable management issues associated with ecology cultural traditions forest policy and commerce They examine some of the major social economic and biological benefits of NTFPs while also addressing the potential negative consequences of NTFP harvesting on forest ecosystems and on NTFP species populations Within this wealth of information are rich accounts of NTFP use drawn from all parts of the American landscape from the Pacific Northwest to the Caribbean From honey production to a review of nontimber forest economies still active in the United States such as the Ojibway harvest of plants recounted here the book takes in the whole breadth of recent NTFP issues including ecological concerns associated with the expansion of NTFP markets and NTFP tenure issues on federally managed lands No other volume offers such a comprehensive overview of NTFPs in North America By examining all aspects of these products it contributes to the development of more sophisticated policy and management frameworks for not only ensuring their ongoing use but also protecting the future of our forests

**Extraterrestrial Altruism** Douglas A. Vakoch, 2013-09-14 Extraterrestrial Altruism examines a basic assumption of the Search for Extraterrestrial Intelligence SETI that extraterrestrials will be transmitting messages to us for our benefit This question of whether extraterrestrials will be altruistic has become increasingly important in recent years as SETI scientists have begun contemplating transmissions from Earth to make contact Technological civilizations that transmit signals for the benefit of others but with no immediate gain for themselves certainly seem to be altruistic But does this make biological sense Should we expect altruism to evolve throughout the cosmos or is this only wishful thinking Is it dangerous to send messages to other worlds as Stephen Hawking has suggested or might humankind benefit from an exchange with intelligence elsewhere in the galaxy Would extraterrestrial societies be based on different ethical principles or would we see commonalities with Earthly notions of morality Extraterrestrial Altruism explores these and related questions about the motivations of civilizations beyond Earth providing new insights that are critical for SETI Chapters are authored by leading scholars from diverse disciplines anthropology astronomy biology chemistry computer science cosmology engineering history of science law philosophy psychology public policy and sociology The book is carefully edited by Douglas Vakoch Director of Interstellar Message Composition at the SETI Institute and professor of clinical psychology at the California Institute of

**Sustaining Biodiversity and Ecosystem Functions** Clement A. Tisdell, 2015-10-30 The stock of the world's biological diversity and the state of its ecosystems are major determinants of the availability of commodities both essential and desirable for human life This leading edge study provides an overarching and balanced approach to the economics of biological conservation considering man made and natural components and their interdependence Recognising the deficiencies of many contemporary studies which focus almost entirely on natural capital Clement Tisdell utilizes the concept of heritage biological capital including germplasm as part of his analysis of changes in the stock of biological capital This comprehensive synthesis casts doubt upon some propositions and policies for resource conservation recommended by eminent ecologists in areas such as GM crops and livestock husbandry as well as agroecosystems and the concept of sustainable agricultural intensification The propositions presented are lent strength by the author's decision to relate his analysis to pertinent contemporary institutional developments and scientific advances The broad scope and rational scepticism with which this book has been compiled make it an ideal read for economists interested in ecological and environmental economics natural scientists with an interest in biodiversity conservation and higher level

policy makers in ecological and environmental fields      The Economics of Managing Biotechnologies T.M. Swanson, 2006-04-11 The advent of new biotechnologies implies significant changes in the world both biologically and industrially Biologically these new technologies represent changes on a scale never before witnessed in the context of evolutionary systems How these systems will respond to these changes is uncertain and potentially very significant The first part of this volume addresses these issues in a series of chapters considering the manner in which societies might analyse and manage these systemic responses to biotechnological changes The second part of the volume addresses the industrial issues concerning biotechnologies One of the primary motivations for these changes is to enhance the appropriability of the value of innovation occurring within the life sciences sectors Changing to a property rights based system of biotechnology has implications for the nature of research and development within these sectors and the diffusion and distribution of its benefits across the globe Another set of chapters in this volume sets out a framework for considering these important industrial issues The volume is the outcome of a two year project on the economics of managing biotechnologies in agriculture It is recommended to academics and policy makers interested in the issues concerning society's options in the management of this process of technological change      Primate Conservation Biology Guy Cowlshaw, Robin Dunbar, 2021-08-17 From the snub nosed monkeys of China to the mountain gorillas of central Africa our closest nonhuman relatives are in critical danger worldwide A recent report for example warns that nearly 20 percent of the world's primates may go extinct within the next ten or twenty years In this book Guy Cowlshaw and Robin Dunbar integrate cutting edge theoretical advances with practical management priorities to give scientists and policymakers the tools they need to help keep these species from disappearing forever Primate Conservation Biology begins with detailed overviews of the diversity life history ecology and behavior of primates and the ways these factors influence primate abundance and distribution Cowlshaw and Dunbar then discuss the factors that put primates at the greatest risk of extinction especially habitat disturbance and hunting The remaining chapters present a comprehensive review of conservation strategies and management practices highlighting the key issues that must be addressed to protect primates for the future      **Forest Guardians, Forest Destroyers** Tim Forsyth, Andrew Walker, 2011-07-01 In this far reaching examination of environmental problems and politics in northern Thailand Tim Forsyth and Andrew Walker analyze deforestation water supply soil erosion use of agrochemicals and biodiversity in order to challenge popularly held notions of environmental crisis They argue that such crises have been used to support political objectives of state expansion and control in the uplands They have also been used to justify the alternative directions advocated by an array of NGOs In official and alternative discourses of economic development the peoples living in Thailand's hill country are typically cast as either guardians or destroyers of forest resources often depending on their ethnicity Political and historical factors have created a simplistic misleading and often scientifically inaccurate environmental narrative Hmong farmers for example are thought to exhibit environmentally

destructive practices whereas the Karen are seen as linked to and protective of their ancestral home Forsyth and Walker reveal a much more complex relationship of hill farmers to the land to other ethnic groups and to the state They conclude that current explanations fail to address the real causes of environmental problems and unnecessarily restrict the livelihoods of local people The authors critical assessment of simplistic environmental narratives as well as their suggestions for finding solutions will be valuable in international policy discussions about environmental issues in rapidly developing countries Moreover their redefinition of northern Thailand s environmental problems and their analysis of how political influences have reinforced inappropriate policies demonstrate new ways of analyzing how environmental science and knowledge are important arenas for political control This book makes valuable contributions to Thai studies and more generally to the fields of environmental science ecology geography anthropology and political science as well as to policy making and resource management in the developing world The State of the World's Animal Genetic Resources for Food and Agriculture

Barbara Rischkowsky,Dafydd Pilling,2007-01-01 Sustainable management of the world s livestock genetic diversity is of vital importance to agriculture food production rural development and the environment This publication is the first global assessment of these resources Drawing on 169 Country Reports contributions from a number of international organizations and 12 specially commissioned thematic studies it presents an analysis of the state of agricultural biodiversity in the livestock sector origins and development uses and values distribution and exchange risk status and threats and of capacity to manage these resources institutions policies and legal frameworks structured breeding activities and conservation programs Needs and challenges are assessed in the context of the forces driving change in livestock production systems Tools and methods to enhance the use and development of animal genetic resources are explored in sections on the state of the art in characterization genetic improvement economic evaluation and conservation As well providing a technical reference document the country based preparation of The State of the World has led to a process of policy development and a Global Plan of Action for Animal Genetic Resources which once adopted will provide an agenda for action by the international community Publisher s description Livestock Biodiversity Stephen J. G. Hall,2008-04-15 Livestock biodiversity is integral to our culture history environment economy and most importantly our future Thousands of livestock breeds from relatively small genetic pools have evolved over time to suit particular environments and farming systems This is both the result of natural processes and of human needs for specialized livestock as our knowledge of genetics continues to increase we achieve a greater understanding of how this biodiversity evolved This book offers a detailed and comprehensive overview of livestock biodiversity It explores the history behind it shows how livestock biodiversity can be utilized as animal genetic resources through breed development and by crossbreeding examines the state of world livestock biodiversity today and emphasizes the importance of conserving and developing the biodiversity of livestock Special consideration is given to How livestock biodiversity arose and is maintained in relation to human society How it can be used in sustainable agricultural

development How it can be conserved for the benefit of present and future generations Why conservation biologists as well as agriculturists should be involved in its protection
