essentials Otto Neurath's Economics in Context Elisabeth Nemeth, Stefan W. Schmitz, Thomas E. Uebel, 2008-05-22 Otto Neurath 1882 1945 was a highly unorthodox thinker both in philosophy and economics He proposed a radically expanded scope of economic analysis that would facilitate a comparative and systematic study of the impact of a great variety of economic and political measures on a population's well being Neurath regarded the controversial and widely misunderstood concept of calculation in kind as an indispensable instrument for anyone economist or politician who sought to analyze economic relationships from a wider perspective than that of price formation under market conditions What is the impact of alternative economic political or organisational measures on living conditions What are the appropriate methods to compare and to rationally choose among alternative measures In Neurath's opinion answers to these questions are crucial for every democratic government The contributions to this sparkling new book conclude that Neurath touched on many of the most critical problems of economic theory during its formative years as a modern discipline his economics provides insights into the foundational problems of modern economics and should encourage contemporary economic theorists to critically reflect their own hidden presumptions Neurath's arguments continue to challenge the foundations of today's neo liberal approach to political economy They have also been rediscovered by researchers in the fields of ecological economics and of sustainable development as visionary and original His comprehensive theory of life conditions and life quality anticipated the questions development economists and the general public meet today

**The Oxford Handbook of Africa and Economics: Context and concepts** Célestin Monga, Justin Yifu Lin, 2015 For a long time economic research on Africa was not seen as a profitable venture intellectually or professionally few researchers in top ranked institutions around the world chose to become experts in the field This was understandable the reputation of Africa centered economic research was not enhanced by the well known limitations of economic data across the continent Moreover development economics itself was not always fashionable and the broader discipline of economics has had its ups and downs and has been undergoing a major identity crisis because it failed to predict the Great Recession Times have changed many leading researchers including a few Nobel laureates have taken the subject of Africa and economics seriously enough to devote their expertise and creativity to it They have been amply rewarded the richness complexities and subtleties of African societies civilizations rationalities and ways of living have helped renew the humanities and the social sciences and economics in particular to the point that the continent has become the next major intellectual frontier to researchers from around the world In collecting some of the most authoritative statements about the science of economics and its concepts in the African context this handbook the first of two volumes opens up the diverse acuity of commentary on exciting topics and in the process challenges and stimulates the quest for knowledge Wide ranging in its scope themes language and approaches this volume explores examines and assesses economic thinking on Africa and Africa's contribution to the discipline The editors bring a set of powerful resources to this endeavor most notably a team of internationally renowned economists whose diverse viewpoints are complemented by the perspectives

of philosophers political scientists and anthropologists

**Economics of Identity Theft** L. Jean Camp,2007-09-30 Anyone who has ever bought a car rented an apartment had a job or conversation that they would rather not see in their employee review may find this book of interest There is a collision occurring in identity management Identity technologies are problematic and many see light at the end of the identity theft tunnel Yet the innovation is driven by individual tendencies to seek convenience and business imperatives to minimize risk with maximized profit The light is an oncoming identity train wreck of maximum individual exposure social risk and minimal privacy The primary debate over identity technologies is happening on the issue of centralization RealID is effectively a centralized standard with a slightly distributed back end e g fifty servers RealID is a national ID card Many mechanisms for federated identities such as OpenID or the Liberty Alliance imagine a network of identifiers shared on an as needed or ad hoc process These systems accept the limits of human information processing and thus use models that work on paper Using models that work on paper results in systematic risk of identity theft in this information economy There are alternatives to erosions of privacy and increasing fraud There is an ideal where individuals have multiple devices including computers smart cards and cell phones Smart cards are credit card devices that are cryptographically secure This may be shared and misused or secure and privacy enhancing Yet such a system requires coordinated investment

**Macroeconomics in Context** Neva Goodwin,Jonathan M. Harris,Julie A. Nelson,Brian Roach,Mariano Torras,2015-03-12 Macroeconomics in Context lays out the principles of macroeconomics in a manner that is thorough up to date and relevant to students Like its counterpart Microeconomics in Context the book is attuned to economic realities and it has a bargain price The in Context books offer affordability engaging treatment of high interest topics from sustainability to financial crisis and rising inequality and clear straightforward presentation of economic theory Policy issues are presented in context historical institutional social political and ethical and always with reference to human well being

**Applied Behavioral Economics Research and Trends** Ianole, Rodica,2016-12-12 Interdisciplinary factors in the modern business realm have significant impacts on economic agents within organizations These behavioral influences affect multiple decision making processes on both the individual and organizational levels Applied Behavioral Economics Research and Trends provides a comprehensive examination of the social psychological and emotional factors in organizational behavior and economic decision making and how these issues provide a deeper understanding of various economic behaviors Highlighting relevant coverage across a range of topics such as consumer behavior inter temporal choices and self employment this book is ideally designed for managers researchers professionals graduate students and practitioners seeking scholarly material on the implications of behavioral economics across numerous industries

**Dollars and Change** Louis G. Putterman,2009 This book explains economic ideas in nontechnical language and is accessible to readers with little background in economics Recognizing that abstract models and theories can leave readers puzzling over the meaning and significance of economics Putterman addresses such questions as Why is the economy organized the way it

is Can economic efficiency and economic justice coexist Will those who live in the world's poor countries be able to join the well off Is the economy optimally arranged for maintaining the life sustaining capacity of our planet The author encourages readers to think more deeply and widely about economic issues and offers notes and recommendations for further reading at the end of each chapter Social, Political, and Economic Contexts in Public Relations Hugh M. Culbertson, Dennis W. Jeffers, Donna Besser Stone, Martin Terrell, 2012-10-12 Two commissions within the Public Relations Society of America have recently defined courses in case study analysis research methods and behavioral science theory as central to an acceptable public relations curriculum To date these three streams within PR education have run independently of each other The authors produced this volume because they believe that there is a growing demand for an integrative applied theory approach to the study of public relations cases The need for PR professionals to study the social political and economic contexts of public relations carefully had been apparent for some time as issues management and environment scanning emerged as focal points of modern public relations Yet there was no systematic framework for such study This volume however with its strong foundation in theory provides just that framework and is highly suitable for graduate level courses in public relations **Imagining Economics Otherwise** Nitasha Kaul, 2007-10-04 The result of a multifaceted investigation into the nature of knowledge produced by economics this book re-examines certain understood ways of thinking about economics as a discipline especially in relation to questions of identity and difference **Ecological economics** C.M. van der Heide, W.J.M. Heijman, J.H.J. Schaminee, 2025-07-21 A textbook about the nature of economics and the economics of nature Is economic growth the cause of or the solution for biodiversity loss Why do we keep drilling for oil and gas when green energy sources are cheaper And is it possible to protect nature without government intervention The answer to these and other questions lies in economic knowledge But in an age when the boundaries between nature and society are becoming increasingly vague ecology and economics are still worlds apart Not only should economists find out more about ecology ecologists should acquire a better understanding of economic principles and concepts from Adam Smith's invisible hand to the Gini coefficient and from diminishing marginal utility to the Hedonic Pricing method The aim of this book is to provide students with knowledge and an understanding of economic science and to offer them a mindset for tackling the important ecological issues of our time The book demonstrates that economic theories are sometimes part of an ecological problem but can also offer valuable insights in the search for a solution The textbook is intended for use on ecology courses at institutes for professional education and on science courses A strange combination at first glance but having read this book I am convinced of the inextricable link between ecology and economics This book is an eye opener not just for professional and science students but also for policymakers and land managers My interest increased with every page and my knowledge about the interfaces and connections between two interesting disciplines grew considerably Hans van Rooijen Former director of Woodland and Nature Conservation course Hogeschool Van Hall Larenstein the Netherlands Old fashioned

administrators and economists have a tendency to regard economics and ecology as counter forces And many nature conservationists don't think that nature should be discussed in terms of economic utility In all honesty both visions are fairly blinkered It goes without saying that nature has a value in itself which is why Natuurmonumenten has worked in this area for more than 110 years But nature also has economic significance and needn't be an obstacle to economic development It can even be an economic multiplier The thinking around synergies between economics and ecology must be intensified to make the world a better place This book can only help Marc van den Tweel Chief Executive Natuurmonumenten Dutch conservation organisation the Netherlands *The Economics of Green Growth* Shunsuke Managi, 2015-06-05 The Economics of Green Growth investigates the possibility of creating an integrated indicator covering three pillars of sustainable development economy society and the environment The excessive pursuit of economic efficiency has resulted in severe environmental problems such as climate change and biodiversity loss and societal human issues such as inequality and disparity The book aims to change the direction of economic growth towards one which is more sustainable It explores beyond the conventional indicator the GDP that measures economic growth and human well being It also introduces new indicators relevant to sustainable development and a green economy and discusses the key issues for these indicators

Economics in the Twenty-First Century Robert Chernomas, Ian Hudson, 2016-01-01 Economics has always been nicknamed the dismal science but today the field seems a little more dismal than usual as governments social movements and even students complain that the discipline is failing to make sense of the major economic problems of the day In Economics in the Twenty First Century Robert Chernomas and Ian Hudson demonstrate how today's top young economists continue to lead the field in the wrong direction The recent winners of the John Bates Clark medal economics's baby Nobel have won that award for studying important issues such as economic development income inequality crime and health Examining their research Chernomas and Hudson show that this work focuses on individual choice ignores the systematic role of power in the economic system and leads to solutions that are of limited effectiveness at best and harmful at worst An accessible summary of the latest debates in economics Economics in the Twenty First Century takes on what is missing from mainstream economics why it matters and how the discipline can better address the key concerns of our era **Design Economics for the Built Environment** Herbert Robinson, Barry Symonds, Barry Gilbertson, Ben Ilozor, 2015-03-26 The drive towards environmentally friendly buildings and infrastructure has led to a growing interest in providing design solutions underpinned by the core principles of sustainability to balance economic social and environmental factors Design Economics for the Built Environment Impact of sustainability on project evaluation presents new directions reflecting the need to recognise the impact of climate change and the importance of sustainability in project evaluation The aim is to provide a new approach to understanding design economics in the context of the changing policy environment legislative and regulatory framework and increasing economic environmental and social pressure as result of the sustainability agenda The book follows a structured

approach from theories and principles in the earlier chapters to the practical applications and emerging techniques focusing on value and social economic and environmental considerations in making design decisions It starts with the policy context building on various theories and principles such as capital cost value of design and resource based theories the new rules of measurement NRM to explore cost planning the relationship between height and costs key socio economic and environmental variables for design appraisal eco cost value ratio EVR whole life theory and the treatment of carbon emission as external costs productivity and efficiency fiscal drivers and legal framework for carbon reduction procurement and allocation of risks in contracts Case studies practical examples and frameworks throughout reinforce theories and principles and relate them to current practice The book is essential reading for postgraduate students in architecture building and quantity surveying and is also a valuable resource for academics consultants and policy makers in the built environment **The Basho of**

**Economics** Silja Graupe, 2013-05-02 In the parlance of modern Japanese philosophy the term Basho denotes a field of experience underlying all conceptions of reality while remaining itself conceptually ungraspable The Basho of Economics then refers to the economy's hidden experiential ground which has never been explicitly scrutinized as such by mainstream economics We uncover this ground by discerning the tacit presuppositions of classical and neo classical theories from the perspective of modern Japanese philosophy In particular we draw attention to the traditional atomist assumptions implicit in their equilibrium centered models By breaking through these assumptions we reconstruct the economy as a functional and relational world of habitual and creative activity outside of the scope of mechanical laws *Contextual Issues Em*

Stüphan, 2011 *International Symposium on Theory and Practice in Transport Economics The Evaluation of Past and Future Transport Policy Measures Tenth International Symposium on theory and practice in transport economics, Berlin (West), 13-15 May 1985: Introductory reports and summary of discussions* European Conference of Ministers of

Transport, 1985-12-01 This book presents the proceedings of the Tenth International Symposium on theory and practice in transport economics held in West Berlin on 13-15 May 1985 The conference focused on evaluation of past and future transport policy measures The Palgrave Handbook of Development Economics Machiko Nissanke, José Antonio

Ocampo, 2019-08-12 This Handbook responds to the needs and aspirations of current and future generations of development economists by providing critical reference material alongside or in relation to mainstream propositions Despite the potential of globalisation in accelerating growth and development in low and middle income countries through the spread of technology knowledge and information its current practice in many parts of the world has led to processes that are socially economically and politically and ecologically unsustainable It is critical for development economists to engage with the pivotal question of how to change the nature and course of globalisation to make it work for inclusive and sustainable development Applying a critical and pluralistic approach the chapters in this Handbook examine economics of development paths under globalisation focusing on sustainable development in social environmental institutional and political economy

dimensions It aims at advancing the frontier of development economics in these key aspects and generating more refined policy perspectives It is critically reflective in examining effects of globalisation on development paths to date and in terms of methodological and analytical approaches as well as forward thinking in policy perspectives with a view to laying a foundation for sustainable development      *Economic Voting* Han Dorussen, Michael Taylor, 2003-09-02 Economic voting is a phenomenon that political scientists and economists can hardly overlook There is ample evidence for a strong link between economic conditions and government popularity However not everything is that simple and this edited collection focuses on the comparative puzzle of economic voting Economic Voting emphasises the importance of comparative research design and argues that the psychology of the economic voter model needs to be developed further      **International Symposium on Theory and Practice in Transport Economics 14th International Symposium on Theory and Practice in Transport Economics Which Changes for Transport in the Next Century?** European Conference of Ministers of Transport, 2000-02-11 Will the next century see the private sector become more involved in decisions regarding the construction and funding of infrastructure Which technologies will dominate the transport market Where will new markets emerge Will transport still have
