Hickman,1937      **Econometric Models of Cyclical Behavior Volume 2** B. G. Hickman,1972      ECONOMETRIC MODELS OF CYCLICAL BEHAVIOR. VOL. II ,1972      *Econometric Model Performance* Lawrence R. Klein,Edwin Burmeister,2016-11-11 Models of the American economy exist in government research institutes universities and private corporations Given the proliferation it is wise to take stock because these models come from diverse sources and describe different conditions from alternative points of view They could be saying different things about the economy The high level comparative studies in this volume gathered from several issues of the International Economic Review with a substantive introduction and the addition of more comparative material evaluate the performance of eleven models of the American economy the Wharton Mark III Model Brookings Model Hickman Coen Annual Model Liu Hwa Monthly Model Data Resources Inc DRI Model Federal Reserve Bank of St Louis Model Michigan Quarterly Econometric MOEM Model Wharton Annual and Industry Model Anticipation Version of the Wharton Mark III Model Fair Model U S Department of Commerce BEA Model Each of the proprietors or builders of these models describes his own system in his own words These studies come closer than ever before to standardizing model operations for testing purposes Some of the models are monthly while others are annual but the quarterly unit of time is the most frequent Some are demand oriented others are supply oriented and focus on the input output sectors of the economy Some use only observed objective data others use subjective anticipatory data Both large and small models are included In spite of the diversity the contributors have cooperated to trace the differences between their models to root causes and to report jointly the results of their research There are also some general papers that look at model performance from outside the CEME group      Studies in Income and Wealth Conference on Research in Income and Wealth,1972      The Structural Econometric Time Series Analysis Approach Arnold Zellner,Franz C. Palm,2004-10-21 Bringing together a collection of previously published work this

book provides a discussion of major considerations relating to the construction of econometric models that work well to explain economic phenomena predict future outcomes and be useful for policy making Analytical relations between dynamic econometric structural models and empirical time series MVARMA VAR transfer function and univariate ARIMA models are established with important application for model checking and model construction The theory and applications of these procedures to a variety of econometric modeling and forecasting problems as well as Bayesian and non Bayesian testing shrinkage estimation and forecasting procedures are also presented and applied Finally attention is focused on the effects of disaggregation on forecasting precision and the Marshallian Macroeconomic Model that features demand supply and entry equations for major sectors of economies is analysed and described This volume will prove invaluable to professionals academics and students alike

**Specification, Estimation, and Analysis of Macroeconometric Models** Ray C. Fair,1984 This book gives a practical applications oriented account of the latest techniques for estimating and analyzing large nonlinear macroeconomic models Ray Fair demonstrates the application of these techniques in a detailed presentation of several actual models including his United States model his multicountry model Sargent s classical macroeconomic model autoregressive and vector autoregressive models and a small twelve equation linear structural model He devotes a good deal of attention to the difficult and often neglected problem of moving from theoretical to econometric models In addition he provides an extensive discussion of optimal control techniques and methods for estimating and analyzing rational expectations models A computer program that handles all the techniques in the book is available from the author making it possible to use the techniques with little additional programming The book presents the logic of this program A smaller program for personal microcomputers for analysis of Fair s United States model is available from Urban Systems Research Engineering Inc Anyone wanting to learn how to use large macroeconomic models including researchers graduate students economic forecasters and people in business and government both in the United States and abroad will find this an essential guidebook

**Political Economy and Econometric Models of Cyclical Behavior** Kenneth Bruce Trager,1979

**Handbook of Econometrics** Zvi Griliches,Michael D. Intriligator,1983 The Handbook is a definitive reference source and teaching aid for econometricians It examines models estimation theory data analysis and field applications in econometrics Comprehensive surveys written by experts discuss recent developments at a level suitable for professional use by economists econometricians statisticians and in advanced graduate econometrics courses

*Comparative Performance of U.S. Econometric Models* Lawrence Robert Klein,1991 Each year a number of different economic groups in the USA use their own econometric models to forecast what will happen to the economy in the coming year This volume consists of chapters by distinguished economists comparing the different models now being used

**Symposium In Memory Of Kei Mori: Studies In Economic Dynamics** Lawrence R Klein,1995-05-31 Kei Mori pursued dual research interests as an economist and an engineer During the 1960s he worked at the Keio University on problems of dynamic economics and anticipated many later developments in this field both in the

construction and application of macrodynamic models He approached the problem from the point of view of both economics and control engineering He had advanced ideas at an early stage in computer development about distributed processing international data management and control of the dynamic properties of economic systems As a visiting scholar at the University of Pennsylvania during the late 1960s he participated fully in the new developments there in global model building During the later years of his life he turned his attention to engineering research harnessing sunlight for interior plant growth but he left a lasting impression on economics These accomplishments are commemorated in this volume by some of his Japanese colleagues and Lawrence Klein with whom he worked at the University of Pennsylvania This volume contains papers by Kei Mori's colleagues Fumimasa Hamada and Kiyoyuki Kosaka who interpreted and analyzed Kei Mori's dynamic models In addition Mitsuo Saito and associates take up dynamic properties of asset market models It is rounded up with active discussions by leading Japanese economic scholars and a reprinting of one of Kei Mori's original works in econometrics

Simplicity, Inference and Modelling Arnold Zellner, Hugo A. Keuzenkamp, Michael McAleer, 2002-02-07 The idea that simplicity matters in science is as old as science itself with the much cited example of Ockham's Razor *entia non sunt multiplicanda praeter necessitatem* entities are not to be multiplied beyond necessity A problem with Ockham's razor is that nearly everybody seems to accept it but few are able to define its exact meaning and to make it operational in a non arbitrary way Using a multidisciplinary perspective including philosophers mathematicians econometricians and economists this 2002 monograph examines simplicity by asking six questions what is meant by simplicity How is simplicity measured Is there an optimum trade off between simplicity and goodness of fit What is the relation between simplicity and empirical modelling What is the relation between simplicity and prediction What is the connection between simplicity and convenience The book concludes with reflections on simplicity by Nobel Laureates in Economics

*Social Security and Economic Cycles* David Koitz, 1980

*CAPEX Excellence* Hauke Hansen, Wolfgang Huhn, Olivier Legrand, Daniel Steiners, Thomas Vahlenkamp, 2011-07-13 Much of current management literature focuses on a limited set of classical value levers such as cost reduction sales optimization or mergers acquisitions thus neglecting another core value lever capital investments That capital investments receive such limited attention is all the more surprising when one considers how vitally important they are to the economy as a whole as well as individual businesses There is significant value creation potential in optimizing capital investments Investments not only determine the asset structure of a venture They also enable the introduction of new products structural cost reductions The book focuses on core questions to be answered in the critical design and realization phase of new investments Right positioning does the competitive situation allow the investment to be successful Right technology how to optimize timing and risks of technology innovations Right timing how to cope with economic cycles Right size how to identify the optimum size of an asset Right location how to find the best location for an asset Right design how to make investments lean and flexible Right financing how to structure the investment financing The book features an

introductory section that provides an overview of investments across the globe across industries and across time provides practical advice on how to allocate capital to several projects within a company's investment portfolio Optimising Fixed Asset Investment is illustrated with real world examples from a range of industries This book is essential reading for managers faced with challenges of making individual or portfolio capital investment decisions and who are responsible for managing these capital assets over their entire asset lifecycle The ideas put forward within the book will help to sharpen the focus of management on the impact capital investments have on the well being and growth of their companies Optimizing Fixed Asset Investments is a strategic manual for everyone involved or interested in large fixed capital investments

*Econometric Models, Techniques, and Applications* Michael D. Intriligator, Ronald G. Bodkin, Cheng Hsiao, 1996 This book surveys the theories techniques model building and data collection and applications of econometrics KEY TOPICS It focuses on those aspects of econometrics that are of major importance to readers and researchers interested in performing evaluating or understanding econometric studies in a variety of areas It reviews matrix notation and the use of multivariate statistics discusses the specification of the model and the development of data for its estimation covers recent developments in econometric models techniques and applications explains the estimation of single equation models and provides case studies of the applications of econometrics to a wide array of areas including traditional areas such as the estimation of demand functions and production functions and macroeconomic models

*Econometric Models of Asian Link* Shinichi Ichimura, Mitsuo Ezaki, 2012-12-06 This is the first outcome of our effort in ASIAN LINK PROJECT to construct the econometric models of Asian developing countries and analyze their inter dependence with major trading partners the United States and Japan The model we present here is called Asian Link System The countries in this system include Korea Taiwan Hong Kong China the Philippines Thailand Malaysia Singapore Indonesia Japan and the United States They are covered by national models The rest of the world is divided into several regions and treated by simple proto type models The main characteristics of Asian Link System are to deal with the inter dependent relations between Asian developing countries on the one hand and Japan and United States on the other hand Here are presented these national models and the Asian Link System with the underlying statistical data so that any econometrician can re estimate our models and check the results of our research work Nowadays most articles and books in econometrics report only the final results or conclusions of research so that no other econometrician can re calculate or re examine the findings This is very serious in the empirical research because as theorists may make mistakes positive economists do commit errors or miss some possible considerations Unless statistical data are offered other econometricians cannot make suggestions or improve the models This is the main reason why empirical research in econometrics or applied econometrics are not making substantial progress in recent years
