on economic growth and welfare of market economies as well as the reverse linkage It is arranged in three parts Part I of the book discusses the environment and growth There Greiner and Semmler incorporate the role of environmental pollution into modern endogenous growth models and use recently developed dynamic methods and techniques to derive appropriate abatement activities that policymakers can institute Part II looks at global climate change using these same growth models Here too the authors provide direct and transparent policy implications More specifically the authors favour tax measures such as a carbon tax over emission trading as instruments of mitigation policies Part III evaluates the use and overuse of renewable and non renewable resources in the context of a variety of dynamic models They in particular consider the cases when resources interact as an ecological system and analyze issues of ownership of resources as well as policy measures to avoid the overuse of resources In addition not only intertemporal resource allocation but also the eminent issues relating to intertemporal inequities as well as policy measures to overcome them are discussed in each part of the book **Economics**

Global Environmental Politics Johannes Urpelainen, 2022-07-29 Emerging economies have fundamentally transformed global environmental politics Led by China and India they increasingly make or break international negotiations which now require agreement among a large number of governments with widely varied preferences Emerging economies which still suffer from widespread poverty and frequently struggle with policy implementation often feel that Western led initiatives neglect their needs What does the global environmental policy landscape look like in the age of a rising Global South This

book explains why emerging economies have come to dominate global environmental politics and examines the implications for future international cooperation Johannes Urpelainen shows that emerging economies continue to prioritize economic growth and often have limited institutional capacity to contain the environmental destruction that it causes However he argues despite barriers to cooperation innovative bargaining and institutional design offer a way forward Bottom up agreements that respect national sovereignty and invest in capacity building hold more promise than traditional top down treaties with binding commitments The book features detailed discussions of attempts to address hazardous chemicals loss of biodiversity and climate change a comparative analysis of China and India and case studies of nine other emerging economies around the world Global Environmental Politics is an essential forward looking overview of today s most pressing international issue

Downie, Jen Iris Allan, 2025-09-25 Global Environmental Politics has provided an accurate up to date and unbiased understanding of the world's most pressing environmental issues for more than thirty years. This ninth edition continues this practice by covering critical new developments in global environmental politics and policymaking. Updated case studies on key issues such as climate change, endangered species, ozone depletion, land degradation and desertification, marine biodiversity in areas beyond national jurisdiction, whaling, hazardous wastes, toxic chemicals, mercury and biodiversity detail the ongoing development of major environmental treaty regimes and a new case study on plastic pollution showcases the challenges of creating new treaties during a period of significant global change. There is also new material on the challenges to implementing the Sustainable Development Goals, the 2030 Agenda for Sustainable Development, the World Trade Organization's agreement on fisheries subsidies and the use of the International Court of Justice to improve compliance with environmental agreements. Navigating Global Environmental Sustainability Bret L. Billet, 2023-08-22 The Great Recession provided an opportunity to reconsider how to simultaneously enhance the well being of individuals, corporations, countries and the global environment. A half century of vital environmental data demands examining several questions pertaining to the impact of a recession on sustainable environmental consumption. Does a recession provide an occasion for productive dialogue that might reconcile the ostensible incompatibility of economic and ecological rationales? Does it constitute an artificial turning point whereby appropriate incentives may induce productive change? Are post recession environmental consumption patterns indicative of government encouragement and corporate willingness to pursue transformative environmental technologies? Alternatively, are the patterns illustrative of countries transferring their environmental consumption to other countries via international trade? Bret L. Billet argues that the simultaneous investigation of both the Ecological Modernization theory and the Ecological Unequal Exchange theory strengthens the present quantitative analysis, enhancing understanding of the recession, well being, sustainable environment nexus. Each ecological theory is rooted in the politicized evolution of traditional theories of economic development. The introduction of an Aristotelean conception of development as well being, an exceptionally large number of cases and the analysis of multiple country subsets results in a more robust inquiry as to the

impact of the Great Recession on the global sustainable environment
