Island Dr. James Lazell, 2005-11-01 Guana in the British Virgin Islands is home to a remarkably diverse assortment of animal and plant life mangroves flamingos iguanas frogs birds snakes spiders tortoises grasshoppers and bats to name but a few What is so surprising about Guana s astonishing panoply is that

according to prevailing ecological theories the island's diversity should be much lower than it actually is This provocative book describes Guana's flora and fauna against the backdrop of islands worldwide and their ecology evolution and conservation Much more than a book about one island it raises important challenges to prevailing dogma of island biogeography and theoretical ecology James Skip Lazell demonstrates that meaningful conservation and avoiding tragic loss of biodiversity demand we know far more about biological interactions physiographic and geological structure meteorology and other factors He presents compelling evidence that high levels of natural biodiversity underpin ecosystem resilience and stability Lazell's engaging narrative containing many entertaining asides and personal reflections widens into an evocative commentary about the nature of life on earth [Endangered Species Technical Bulletin](#) ,1982 [Scientific American](#) ,1901
