Repertorium van de nederlandsche jurisprudentie en rechtliteratuur, 1893 **Bulletin**, 1909 **Past Futures** Ged Martin, 2004-12-15 By nature human beings seek to make sense of their past Paradoxically true historical explanation is ultimately impossible Historians never have complete evidence from the past nor is their methodology rigorous enough to prove causal links Although it cannot be proven that A caused B by redefining the agenda of historical discourse scholars can locate events in time and place history once again at the heart of intellectual activity In Past Futures Ged Martin advocates examining the decisions that people take most of which are not the result of a process but are reached intuitively Subsequent rationalizations that constitute historical evidence simply mislead All historians can do is to locate them in time to explain not why a decision was taken but why then To illustrate Martin asks a number of questions What is a long time in history Are we close to the past or remote from it Is democracy a recent experiment or proof of our arrival at the end of a journey through time Can we engage in a historical dialogue with the past without making clear our own ethical standpoints Although explanation is ultimately impossible humankind can make sense of its location in time through the concept of significance a device for highlighting events and aspects of the past In so doing Martin suggests a radical new approach to historical discourse

Baker, Guillaume Echevarria, Marie-Odile Simonnot, Jean Louis Morel, 2020-12-07 This second and expanded edition of the first book on agromining phytomining presents a comprehensive overview of the metal farming

recovery of the agromining production chain Agromining is an emerging technology that aims to transform the extraction of sources of target elements not accessible by traditional mining and processing techniques Agromining which is based on sustainable development uses hyperaccumulator plants as metal crops farmed on sub economic soils or minerals wastes to obtain valuable target elements This volume is edited and authored by the pioneers in the rapidly expanding field of agromining and presents the latest insights and developments in the field This book provides in depth information on the global distribution and ecology of hyperaccumulator plants their biogeochemical pathways the influence of rhizosphere microbes the physiology and molecular biology of hyperaccumulation as well as aspects of propagation and conservation of these unusual plants It describes the agronomy of metal crops and opportunities for incorporating agromining into rehabilitation and mine closure including test cases for agromining of nickel cobalt manganese arsenic selenium cadmium zinc thallium rare earth elements and platinum group elements Since the first edition was published there have successful nickel agromining field trials in the tropics in Malaysia and Guatemala and these are presented in a dedicated case study chapter Other new chapters focus on the processing of bio ore for elements other than nickel such as rare earth elements and cadmium and on agromining from industrial wastes such as tailings and industrial by products and sites Furthermore the book features two new chapters that provide a comprehensive assessment of accumulation a very wide range elements from the Periodic Table in various plant species around the globe and a chapter on practical methods for discovery of hyperaccumulator plant species in the field and in the herbarium This book is of interest to environmental professionals in the minerals industry government regulators and academics

Recent Advances in Lichenology

Dalip Kumar Upreti, Pradeep K. Divakar, Vertika Shukla, Rajesh Bajpai, 2014-12-18 This book discusses in detail molecular mycobiont culture biomonitoring and bioprospection of lichens providing insights into advances in different fields of lichenology by applying modern techniques and approaches and examining how their application has enhanced or changed classical approaches It offers a valuable resource especially for beginners students and researchers from different academic backgrounds interested in the study of lichens In recent years the introduction of modern analytical techniques and approaches has significantly improved our understanding of the environment including lichens Lichens are unique organisms which possess untapped potential as effective and reliable bioindicators sources of therapeutic phytochemicals and as excellent extremophiles The unique and peculiar characteristics of lichens underline the need for a multidimensional approach to explore their potential in various fields of environment science botany and chemistry Modern techniques especially molecular techniques have greatly enriched the field of lichen taxonomy and its position in the plant kingdom revealing little known species and exploring their evolutionary history while multivariate analysis and GIS approaches have established lichens as an ideal and reliable tool for monitoring air pollution Advanced culture techniques have expanded the pharmacological applications of lichens which was formerly restricted due to their small biomass The advent of sophisticated

analytical instrumentation has now facilitated the isolation and characterization of lichens bioactive constituents even in lower concentrations as well as the estimation of their stress responses at different levels of pollution As lichen diversity is adversely affected by increasing air pollution there is a pressing need to develop effective management practices to conserve restore and document lichen diversity
