Gene Expression General And Cell Type Specific Progress In Gene Expression:

Gene Expression M. Karin, 2013-03-08 This book is the first volume in a new series Progress in Gene Expression The control of gene expression is a central most topic in molecular biology as it deals with the utilization and regulation of gene information As we see huge efforts mounting all over the developed world to understand the structure and organization of several complex eukaryotic genomes in the form of Gene Projects and Genome Centers we have to remember that without understanding the basic mechanisms that gov ern the use of genetic information much of this effort will not be very productive Fortunately however research during the past seven years on the mechanisms that control gene expression in eukaryotes has been extremely successful in generating a wealth of information on the basic strategies of transcriptional control Although regulation of gene ex pression is exerted at many different levels much of the emphasis in this series will be on transcriptional control A future volume however will deal with other levels of regulation The progress in understanding the control of eukaryotic transcription can only be appreciated by realizing that seven years ago we did not know the primary structure of a single sequence specific transcriptional activator and those whose primary structures were available e.g. homeo domain proteins were not yet recognized to function in this capacity Gene Expression M. Karin, 1993-12-01 This book is the first volume in a new series Progress in Gene Expres sion The control of gene expression is a central most topic in molecular biology as it deals with the utilization and regulation of gene information As we see huge efforts mounting all over the developed world to understand the structure and organization of several complex eukaryotic genomes in the form of Gene Projects and Genome Centers we have to remember that without understanding the basic mechanisms that gov ern the use of genetic information much of this effort will not be very productive Fortunately however research during the past seven years on the mechanisms that control gene expression in eukaryotes has been extremely successful in generating a wealth of information on the basic strategies of transcriptional control Although regulation of gene ex pression is exerted at many different levels much of the emphasis in this series will be on transcriptional control A future volume however will deal with other levels of regulation The progress in understanding the control of eukaryotic transcription can only be appreciated by realizing that seven years ago we did not know the primary structure of a single sequence specific transcriptional activator and those whose primary structures were available e g homeo domain proteins were not yet recognized to function in this Oxidative Stress, Cell Activation and Viral Infection C. Pasquier, 2013-03-08 Since the appearance of capacity photosynthesis on our planet all living organisms have been facing a new abundant extremely reactive element oxygen This element is used for the synthesis of highly energetic compounds but can also generate molecules capable of damaging constituents of living structures including proteins nucleic acids and lipids It is therefore no surprise that all biological organisms have evolved multiple and sophisticated ways to reduce the detrimental effects of oxygen For cells and tissues of highly organized animals particularly cells of the immune system superoxidation products play an important role via oxidative stress in activation inflammation and viral and bacterial infections We must be grateful to Drs C Pasquier C Auclair L Packer and R Olivier for having brought together many specialists in an international meeting held in Paris in March 1993 at the Ministry of Research This book comprises an impressive amount of recent knowledge a real mine for the reader in this fast developing field of research Furthermore we should not forget that this basic research may lead in the future to new therapeutic approaches to the most important pathologies of the latter part of this century including AIDS <u>Gene</u> <u>Regulation as a Driver of Adaptation and Speciation</u> Ekaterina Shelest, Katja Nowick, Deborah A. Oncogenes as Transcriptional Regulators Moshe Yaniv, Jacques Ghysdael, 2013-11-27 The intensive study of molecular events leading to cellular transformation in tissue culture or in intact organisms culminated in the identification of 100 or more genes that can be defined as oncogenes or tumor suppressor genes Functionally these genes can be divided into several classes each involved in a different step in transmission of signals from the exterior of the cell to the nucleus The first oncogenes to be biochemically character ized included membrane receptors for growth factors growth factors themselves protein kinases or small GTP binding proteins involved in signal transduction Later the development of techniques to study pro teins DNA interaction in eucaryotes and the isolation and characterization of many promoter and enhancer sequences revealed that a number of the classical retroviral oncogenes were indeed transcription factors. In parallel the rapid progress in the identification and cloning of chromosomal translocations in human and animal malignancies and the increased reper toire of known transcription factors families revealed that many other transcription factors can playa critical role in cancer A more recent devel opment concerns tumor suppressor genes. The realization that human tumors are frequently associated with a loss of function of one or several genes is also one of the landmarks of cancer research in the last 15 years Again as we will see below some of these genes encode transcription factors It is becoming increasingly difficult to cover in a single monograph all oncogenes and tumor suppressor genes **Molecular Biology of Steroid and Nuclear Hormone Receptors** Leonard Freedman, 2012-12-06 Intracellular Receptors New Instruments for a Symphony of Signals In the late eighteenth century it was proposed on theoretical grounds that each of the body s organs beginning with the brain must be a factory and laboratory of a specific humor which it returns to the blood and that these circulating signals are indispensable for the life of the whole Bordeu 1775 During the nineteenth cen tury some remarkable physiological experiments revealed the actions of humoral factors that affected the for and function of multiple tissues organs and organ sys tems within the body Berthold 1849 much later the chemical and molecular na ture of some of those factors was determined Against this deep historical backdrop of the founding studies of intercellular signaling molecular biology sprang into existence a mere forty years ago rooted in the revelation of regulable gene expression in bacteria But contemporaneous with those classical analyses of transcriptional regulation of the lactose operon the mod em era of signal transduction was inaugurated by the identification of cAMP as a second messenger an intracellular mediator of hormonal activation of glycogen catabolism

Sutherland and Rall 1960 Later in that same decade it emerged that cAMP is a critical signal not only in metazoans but even in bacteria where it serves an analogous function as a critical switch that activates expression of genes re quired for catabolism of complex carbon sources including those of the lactose operon

Biomarkers of the Tumor Microenvironment Lars A. Akslen, Randolph S. Watnick, 2022-07-12 This book reviews different aspects of the cancer microenvironment and its regulation and importance for tumor progression Methodological advancements and practical applications in terms of how biomarkers are studied and increasingly included in clinical trials and therapy protocols are described and discussed Biomarkers of the Tumor Microenvironment is an educational resource for students and members of the cancer research community as a whole especially for those using morphology analysis techniques and models focusing on the cross talk between different cell types in tumors. The textbook provides a comprehensive overview of the microenvironment in various contexts from the perspectives of experienced and accomplished cancer researchers and clinicians Advances in Enzyme Regulation George Weber, 2003-07-10 This volume contains papers of 23 outstanding scientists who are working at the leading edge of metabolic regulation studies Much of the volume focuses on novel aspects of signal transduction with emphasis on the role of phospholipase C in cell control mechanisms One of the highlights of this volume is always the Special Symposium Lecture This lecture was given for fifteen years by Nobel laureate Sir Hans A Krebs UK now deceased This year the Lecture was given by Nadir Maraldi Director of the Laboratory of Cellular Biology and Electron Microscopy University of Bologna Italy Professor Maraldi s presentation is on the important and novel subject of Nuclear Proteins and Human Disease <u>Cytometry: New Developments</u>, 2005-01-06 The chapters in CYTOMETRY MCB volumes including this 4th Edition provide comprehensive description of particular cytometric methods and review their applications Some chapters also describe new instrumentation and provide fundamental information on use of new fluorescent probes and on data analysis Although the term edition suggests the update of earlier volumes in fact

nearly all chapters of the 4th Edition are devoted to new topics The authors were invited to present not only technical protocols such as available in other methodology books that specialize in the protocol format but also to discuss the aspects of the methodology that generally are not included in the protocols Many chapters thus present the theoretical foundations of the described methods their applicability in experimental laboratory and clinical setting common traps and pitfalls problems with data interpretation comparison with alternative assays choice of the optimal assay etc Some chapters review applications of cytometry and complementary methodologies to particular biological problems or clinical tasks Comprehensive presentation of cytometric methods covering theoretical applications applicability potential pitfalls and comparisions to alternative assays Discusses many new assays developed since the previous edition Presents recent developments in cytometric intrumentation technology Essential Cytometry Methods Zbigniew Darzynkiewicz, J. Paul Robinson, Mario Roederer, 2009-10-06 Cytometry is characterization and measurement of cells and cellular constituents most often used to immunophenotype cells that is to distinguish healthy cells from diseased cells Flow Cytometry specifically is quite sensitive allowing researchers to detect rare cell types and residual levels of disease and as such has been the method of choice for important studies such as monitoring the blood of AIDS patients For this reason there is a great need for a practical comprehensive manual that will be useful across a broad range of laboratories. This volume as part of the Reliable Lab Solution Series delivers such a tool offering busy researchers across many disciplines a handy resource of all the best methods and protocols for Cytometry to use at the bench Highlights top downloaded and cited chapters authored by pioneers in the field and enhanced with their tips and pitfalls to avoid Loaded with detailed protocols developed and used by leaders in the field Refines organizes and updates popular methods from one of our top selling series Methods in Cell Biology
