Gene Function In Prokaryotes Cold Spring Harbor Monograph Series:

Gene Function in Prokaryotes Jonathan R. Beckwith, 1983 *Current Catalog* National Library of Medicine (U.S.),
The Biochemistry of the Nucleic Acids R. L. Adams, 2012-12-06 When the first edition of this book was published in 1950 it set out to present an elementary outline of the state of knowledge of nucleic acid biochemistry at that time and it was the first monograph on the subject to appear since Levene's book on Nucleic Acids in 1931 The fact that a tenth edition is required after thirty five years and that virtually nothing of the original book has been retained is some measure of the speed with which knowledge has advanced in this field As a result of this vast increase in information it becomes increasingly difficult to fulfil the aims of providing an introduction to nucleic acid biochemistry and satisfying the requirements of advanced undergraduates and postgraduates in biochemistry genetics and molecular biology We have attempted to achieve these aims by concentrating on those basic aspects not normally covered in the general biochemistry textbooks and by providing copious references so that details of methodology can readily be retrieved by those requiring further information The first seven editions emerged from the pen of J N Davidson who died in September 1972 shortly after completing the seventh edition The subsequent editions have been produced by various colleagues who have tried to retain something of the character and structure of the earlier editions while at the same time introducing new ideas and concepts and eliminating some of the more out dated material **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1985 *Translational Control of Gene Expression* Nahum Sonenberg, John W. B. Hershey, Michael B. Mathews, 2001 Since the 1996 publication of Translational Control there has been fresh interest in protein synthesis and recognition of the key role of translation control mechanisms in regulating gene expression This new monograph updates and expands the scope of the earlier book but it also takes a fresh look at the field In a new format the first eight chapters provide broad overviews while each of the additional twenty eight has a focus on a research topic of more specific interest The result is a thoroughly up to date account of initiation elongation and termination of translation control mechanisms in development in response to extracellular stimuli and the effects on the translation machinery of virus infection and disease This book is essential reading for students entering the field and an invaluable resource for investigators of gene expression and its control **Uniform Trade List Annual**, 1977 *Molecular Cell Biology* Harvey F. Lodish, 2008 The sixth edition provides an authoritative and comprehensive vision of molecular biology today It presents developments in cell birth lineage and death expanded coverage of signaling systems and of metabolism and movement of lipids **Research Grants Index** National Institutes of Health (U.S.). Division of Research Grants, 1975 **The Molecular and Cellular Biology of the Yeast *Saccharomyces*** James R. Broach, John Pringle, Elizabeth W. Jones, 1991 *Research Awards Index*, 1979 *National Cancer Institute Monograph* National Cancer Institute (U.S.), 1978 *Insect Molecular Genetics* Marjorie A. Hoy, 2003-03-03 A valuable addition to the personal libraries of entomologists geneticists and molecular biologists *International*

Symposium on Genes and Chromosomes--Structure and Function Juan Ignacio Valencia, Rhoda F. Grell, 1965 **Microbial Development** Richard Losick, Lucy Shapiro, 1984 Stress Tolerance in Horticultural Crops Ajay Kumar, Avinash Chandra Rai, Ashutosh Rai, Krishna Kumar Rai, Ved Prakash Rai, 2021-05-14

Stress Tolerance in Horticultural Crops Challenges and Mitigation Strategies explores concepts strategies and recent advancements in the area of abiotic stress tolerance in horticultural crops highlighting the latest advances in molecular breeding genome sequencing and functional genomics approaches Further sections present specific insights on different aspects of abiotic stress tolerance from classical breeding hybrid breeding speed breeding epigenetics gene quantitative trait loci QTL mapping transgenics physiological and biochemical approaches to OMICS approaches including functional genomics proteomics and genomics assisted breeding Due to constantly changing environmental conditions abiotic stress such as high temperature salinity and drought are being understood as an imminent threat to horticultural crops including their detrimental effects on plant growth development reproduction and ultimately on yield This book offers a comprehensive resource on new developments that is ideal for anyone working in the field of abiotic stress management in horticultural crops including researchers students and educators Describes advances in whole genome and next generation sequencing approaches for breeding climate smart horticultural crops Details advanced germplasm tolerance to abiotic stresses screened in the recent past and their performance Includes advancements in OMICS approaches in horticultural crops

The Molecular and Cellular Biology of the Yeast Saccharomyces: Gene expression James R. Broach, John R. Pringle, Elizabeth W. Jones, 1991 The burgeoning appreciation of yeasts as model systems for the study of fundamental cellular processes has highlighted the need for an update of the seminal 1981 monograph The Molecular Biology of the Yeast Saccharomyces This need is now met by the publication of a three volume series to serve as the authoritative sequel The first volume focuses on the genome organization of the yeast Saccharomyces as well as protein translation and its regulation and energy metabolism Subsequent volumes emphasize such topics as the cell cycle secretion and transcription Together these volumes provide a comprehensive survey of the molecular and cellular biology of Saccharomyces and Schizosaccharomyces serving not only as a current summary of every significant area of investigation but also as a thorough reference source These volumes are required reading for every one in the field and anyone curious about the state of the art of molecular and cellular biology

Nucleases Stuart M. Linn, R. Stephen Lloyd, Richard J. Roberts, 1993 The 1982 publication Nucleases was the first book to survey this diverse and important group of enzymes The new edition has been completely revised and updated It provides a comprehensive review of all classes of nuclease their modes of action and biological significance The book is an invaluable source of information for investigators of DNA replication recombination and repair and RNA processing and for everyone interested in the rational use of nucleases as research reagents

The Biology of Heat Shock Proteins and Molecular Chaperones Richard I. Morimoto, Alfred Tissières, Costa Georgopoulos, 1994 Telomeres Elizabeth Helen Blackburn, Carol W. Greider, 1995 **Cellular Receptors**

for Animal Viruses Eckard Wimmer, 1994 Based on presentations at the Banbury Conference entitled Receptor mediated Virus Entry into Cells held in November 1991 with the addition of other contributions this volume gathers the most relevant information about viral receptors and viral cell invasion The chapters are broadly grouped under three topics description of viral receptors viral attachment and uptake and receptor related virus host interaction Among the specific titles human receptors for retroviruses receptor binding and membrane fusion by influenza hemagglutinin and interaction of reovirus with eukaryotic host pathogenesis and host immune response Annotation copyright by Book News Inc Portland OR
