Maps in Gene Technology Mark Walker,Ralph Rapley,2009-07-17 *Route Maps in Gene Technology* is an exciting new introductory textbook for first year undergraduates in molecular biology and molecular genetics The subject is broken down into 140 to 150 key concepts or topics each of which is dealt with in one doublepaged spread These range from basic introductory principles to applied topics at the cutting edge of research A control strip along the top of the page shows the student which pages need to have been read beforehand and which topics may be followed afterward In addition at the front of the book are a selection of routes which the student or teacher may choose in order to study a particular topic Because courses have become more modular and many students arrive at college with little or no biology background this approach enables teachers and students to structure a course of study to best suit their disparate exposure to biology An exciting new concept in textbook design allowing unparalleled flexibility on the part of the student and the teacher Covers the full range of modern molecular biology from basic principles to the latest applications Attractive clear and simple presentation with copious two colour illustrations *Poultry Genetics, Breeding and Biotechnology* W.M. Muir,S.E. Aggrey,2003 Annotation In this comprehensive research book issues associated with poultry breeding are addressed by examining quantitative and molecular genetics and the uses of transgenic technology The important area of disease resistance and transmission is also covered in a special section looking at the genetics of disease resistance This book represents the first complete integration of our current knowledge of biotechnology and quantitative and molecular genetics as applied to poultry breeding

**Chemical Analysis of Food: Techniques and Applications** Yolanda Picó,2012-07-18 The book contains twenty three chapters written by experts on the subject is structured in two parts the first one describes the role of the latest developments in analytical and bioanalytical techniques and the second one deals with the most innovative applications and issues in food analysis The two first introductory chapters about sampling technique from basic one to the most recent advances which is still a food challenge because is responsible of the quality and assurance of the analysis and on data analysis and chemometrics are followed by a review of the most recently applied techniques in process on line control and in laboratories for the analysis of major or minor compounds of food These techniques ranged from the non invasive and non destructive ones such as infrared spectroscopy magnetic resonance and ultrasounds to emerging areas as nanotechnology

biosensors and electronic noses and tongues including those already well established in food analysis such as chromatographic and electrophoretic techniques These chapters also include two important tools for solving problems in chemical and biological analysis such as mass spectrometry and molecular based techniques Provided by publisher

Pearson, T.R. Dutson, 2013-03-09 The central theme for this volume was chosen since consumers have great interest in purchasing low fat low salt and reduced cholesterol meat poultry and fish products As in past volumes experts in the field have been chosen to write chapters with emphasis on their breadth of knowledge in each specific area Efforts were also made to obtain authors from different countries in order to give the book a worldwide perspective Chapter I stresses the nutritional and sensory properties that meat poultry and fish products make to healthful

diets and discusses consumer concerns about these products Chapter 2 covers dietary recommendations in major consumer nations along with data from food composition tables and the dietary contributions of meat poultry and fish to meeting dietary needs Chapter 3 discusses the labeling of low and reduced fat salt products which although written mainly from the US viewpoint may serve as a model for labeling in other countries Chapter 4 reviews the rationale for reducing fat energy levels in muscle foods problems encountered in their production and how these may be solved Chapter 5 discusses the scientific basis for reducing the salt sodium content in food products and the health benefits derived from lowering salt intake Methods of reducing the cholesterol content of these animal products is reviewed in Chapter 6 *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1993 *Molecular Dissection of Complex Traits* Andrew H.
