Gene Structure and Expression John D. Hawkins,1996-09-12 This third edition of a successful textbook is a concise description of the structure and function of genes

Gene Structure and Expression Donald H. Dean,1980

Mechanisms of Gene Expression Robert O. J. Weinzierl,1999 This book presents much of the current thinking concerning molecular mechanisms of transcriptional control in a form easily accessible to undergraduates with an understanding of basic molecular biology concepts It contains detailed information about the various pro and eukaryotic transcriptional machineries that has recently become available through the combined efforts of geneticists biochemists and structural biologists The book will thus not only serve as an undergraduate text but also offer something new and interesting to more advanced readers and professional scientists who want to keep up to date with rapid advances in this field BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved

Gene Structure and Transcription Trevor John Clark Beebe,Julian Burke,1988 Emphasizing exciting recent developments in the study of gene structure and transcription processes this compares and contrasts eukaryotic and prokaryotic gene structure transcription apparatus and regulation of transcription at molecular level

Regulation of Gene Expression in Plants Carole L. Bassett,2007-02-15 Except for one area of gene expression control plant research has significantly fallen behind studies in insects and vertebrates The advances made in animal gene expression control have benefited plant research as we continue to find that much of the machinery and mechanisms controlling gene expression have been preserved in all eukaryotes Through comparison we have learned that certain aspects of gene regulation are shared by plants and animals i e both contain introns separating the coding regions of most genes and both utilize similar machinery to process the introns to form mature mRNAs Yet there are some interesting differences in gene structure and regulation between plants and animals For example unlike animal genes plant genes are generally much smaller with fewer and smaller introns Regulation of Gene Expression in Plants presents some of the most recent novel and fascinating examples of transcriptional and posttranscriptional control of gene expression in plants and where appropriate provides comparison to notable examples of animal gene regulation

Lexical Semantic Gene Structure of Modern Chinese Dan Hu,2025-07-26 This book draws on genetic theory to explore the microstructure of lexical meaning the operating mechanism of the lexical semantic system and its formal representation and methods for large scale lexical computing resource construction At the theoretical level the basic framework of lexical semantic gene theory is proposed and elaborated In this context a lexical semantic gene is a basic structural unit of lexical meaning that controls a semantic feature of a word and can be inherited and recombined to construct a new word Lexical meaning has multiple dimensions and each dimension is regarded as a semantic feature composed of several lexical semantic genes according to certain semantic relations The generation of new words is the result of the inheritance reorganization and mutation of lexical semantic genes Drawing on this basis the book subsequently

explores the techniques of lexical semantic gene extraction and formalized description of lexical semantic genetic structure at the level of engineering technology Bearing in mind the dual needs of formalized representation of semantic computation on the one hand and traditional language teaching research and lexicography on the other the book employs language fact analysis to define strategies methods and operational procedures for a lexical semantic gene depiction meta language system lexical semantic genetic structure analysis and lexical semantic gene extraction At the application level the computational and traditional applications of the lexical semantic gene database are discussed

Evolution, Emerging Functions and Structure of Actin-Binding Proteins Lei-Miao Yin, Michael Schnoor, Chang-Duk Jun, 2022-02-02 *Gene Regulation* Bert O'Malley, 2012-12-02 *Gene Regulation* documents the proceedings of the CETUS UCLA Symposium Gene Regulation held in Keystone Colorado in March April 1982 The symposium related gene structure and regulatory sequences to overall genomic organization and genetic evolution It was the first meeting to focus on regulation of eukaryotic gene expression since the maturation in recombinant DNA technology The book is organized into four parts Part I presents studies on the structure of eukaryotic genes including the organization and molecular basis for differential expression of the mouse light chain genes globin gene transcription and RNA processing and the cloning of the human chromosomal $\alpha 1$ antitrypsin gene and its structural comparison with the chicken gene coding for ovalbumin Part II on chromatin structure includes papers on nuclease sensitivity of the ovalbumin gene and its flanking DNA sequences and the relationship of chromatin structure to DNA sequence Part III on gene expression includes papers on the role of poly A in eukaryotic mRNA metabolism and the in vitro transcription of *Drosophila* tRNA genes Part IV on cellular biology includes studies such as the importance of calmodulin to the eukaryotic cells

The MIF Handbook Richard Bucala, 2012 The role of the cytokine macrophage migration inhibitory factor MIF in the immune response and in the immunopathogenesis of different inflammatory autoimmune and infectious disorders is now well established The aim of this handbook is to provide an authoritative volume covering all aspects of MIF from basic molecular biology to structure function relationships pathophysiology genetics and drug development Recent studies continue to broaden considerably the role of MIF in both normal physiology and pathology which range from such diverse areas as oncogenesis cardiac physiology and neurodevelopment MIF's molecular mechanism of action in these contexts is becoming increasingly understood and the role of variant MIF alleles in different conditions continues to be defined Unique structural features of the protein such as an intrinsic catalytic activity and the continuing elucidation of its receptor dependent mechanism of action offer attractive opportunities for therapeutic intervention This volume will provide a comprehensive synthesis of the state of the art of MIF science
