General Aviation:

The General Aviation Industry in America Donald M. Pattillo, 2020-03-02 The industry known as general aviation encompassing all flying outside of the military and commercial airlines dates from the early days of powered flight As technology advanced making possible smaller aircraft that could be owned and operated by civilians manufacturers emerged to serve a growing market Increasingly this meant business flying as companies used aircraft in a variety of roles The industry struggled during the Great Depression but development continued small aircraft manufacturers became vital to the massive military production effort during World War II After the war rapid technological advancement and a robust prosperous middle class were expected to result in a democratized civil aviation industry For many reasons this was never realized even as general aviation roles and aircraft capabilities expanded Despite its many reverses and struggles entrepreneurship has remained the driving factor of the industry

Dreams of Flight Janet R. Daly Bednarek, Michael H. Bednarek, 2003-04-24 General aviation encompasses all the ways aircraft are used beyond commercial and military flying private flights barnstormers cropdusters and so on Authors Janet and Michael Bednarek have taken on the formidable task of discussing the hundred year history of this broad and diverse field by focusing on the most important figures and organizations in general aviation and the major producers of general aviation aircraft and engines This history examines the many airplanes used in general aviation from early Wright and Curtiss aircraft to the Piper Cub and the Lear Jet The authors trace the careers of birdmen birdwomen barnstormers and others who shaped general aviation from Clyde Cessna and the Stinson family of San Antonio to Olive Ann Beech and Paul Poberezny of Milwaukee They explain how the development of engines influenced the development of aircraft from the E 107 that powered the 1929 Aeronca C 2 the first affordable personal aircraft to the Continental A 40 that powered the Piper Cub and the Pratt and Whitney PT 6 turboprop used on many aircraft after World War II In addition the authors chart the boom and bust cycle of general aviation manufacturers the rising costs and increased regulations that have accompanied a decline in pilots the creation of an influential general aviation lobby in Washington and the growing popularity of type clubs created to maintain aircraft whose average age is twenty eight years This book provides readers with a sense of the scope and richness of the history of general aviation in the United States An epilogue examining the consequences of the terrorist attacks on September 11 2001 provides a cautionary note

A History in the Making Donald M. Pattillo, 1998 More like a roller coaster than a plane the general aviation business has soared plunged and risen again since its romantic takeoff in the Lindbergh era This engaging closeup on the history and future of the general aviation industry will fascinate pilots business aviation professionals historians and aviation enthusiasts of every ilk 36 illustrations
