A NEW RECORD FOR FRESH-WATER MEDUSAE IN PENNSYLVANIA

ON August 17, 1937, a single specimen of fresh-water medusa was brought to the writer for identification. In the afternoon of this day approximately 150 jellyfish were collected in an abandoned limestone quarry filled with spring and drainage water, near the village of Almedia, Columbia County, Pennsylvania. This collection, made with a dip net from the shore, was a small part of the population seen. Collections were made at regular intervals until October 25. Residents of the neighborhood who use this pool for bathing report that these animals were noticed several weeks previous to August 17. During this period the density of population varied from several dozen to many thousands. At the height of population density they welled up from the depth of the pool in cloud-like multitudes. This pool is 225 feet wide, 375 feet long, 35 to 90 feet deep, with very abrupt slopes.

The medusae collected in the field ranged from 0.5 mm to 18.0 mm in diameter. No hydroid forms were observed. Live medusae taken to the laboratory survived about four weeks in aquaria supplied with water and Elodea from their natural habitat. The contents of one aquarium in which the medusae had died and disintegrated suddenly became populated with minute medusae and small green hydra. This aquarium had been frequently observed with the hope that the hydroid form might have been brought in on the Elodea. The smallest of these medusae was 0.35 mm in diameter, had eight buds for tentacles, a short manubrium and well-developed velum. Specimens 0.75 mm to 1.00 mm in diameter developed 16 or more tentacles. It is estimated that a total of 250 small medusae were produced in this aquarium during a period of 28 days with a peak population of 100 specimens. Approximately half of these specimens were preserved. Some of the others were isolated with the hope that they might develop to maturity, but without success.

According to Professor Payne these medusae are *Craspedacusta snyderi*.

This is the first locality record for *Craspedacusta* in this section of Pennsylvania.

NEW EXPOSURES OF ORDOVICIAN BENTONITE IN SOUTHWESTERN VIRGINIA

SEVERAL excellent exposures of bentonite have been uncovered by recent road-building activities on Virginia Highway 64 in Turkey Cove, northeastern Lee County, Virginia. The bentonite beds, which vary in thickness from three inches to two feet, occur in the Lowville and Trenton formations (Middle Ordovician). The rocks have been folded and faulted so that the same bed is exposed more than once. When the writer left the area in early September, 1937, seven exposures at three horizons had already been laid open. Road-building was not complete at that time, however, and new cuts will be made in Lowville and Trenton rocks for another mile or more. Hence it is likely that ten or a dozen sections of bentonite will be available for study by the next field season. The susceptibility of the soft volcanic ash to weathering and relatively rapid removal lends especial interest to these fresh exposures.

In a recent paper on the stratigraphy of Ordovician bentonites in southwestern Virginia, Rosenkrans¹ states that the exposures of bentonite in Lee County are poor, and at the same time that the area is one of great importance in establishing by means of bentonite the stratigraphic relations of the Lowville formation in Tennessee, Kentucky and Virginia. This is the case because the sediments of Lowville age in this area are apparently transitional between the limestone deposits of the interior and the clastic rocks in the eastern part of the Appalachian Valley. The bentonite sections newly exposed in Turkey Cove fill the need expressed by Rosenkrans. It is hoped that they will receive the detailed study to which their excellence and strategic position entitle them.

Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of the literature concerning all aspects of astronomy astrophysics and their border fields It is devoted to the recording summarizing and indexing of the relevant publications throughout the world Astronomy and Astrophysics Abstracts is prepared by a special department of the Astronomisches Rechen Institut under the auspices of the International Astronomical Union Volume 44 records literature published in 1987 and received before February 15 1988 Some older documents which we received late and which are not surveyed in earlier volumes are included too We acknowledge with thanks contributions of our colleagues all over the world We also express our gratitude to all organizations observatories and publishers which provide us with complimentary copies of their publications Dr Siegfried Böhme retired from his duties as co editor of Astronomy and Astrophysics Abstracts on December 31 1987 Since 1950 he participated in the bibliographic work of the institute He served as a reviewer for the Astronomischer Jahresbericht and became one of the editors of Astronomy and Astrophysics Abstracts in 1969 After his retirement in 1975 he took care of particularly the Russian literature on a voluntary basis for 12 years It is a pleasure to thank Siegfried Böhme for his valuable contributions Starting with Volume 33 all the recording correction and data processing work was done by means of computers The recording was done by our technical staff members Ms Helga Ballmann Ms Christiane Jehn Ms Monika Kohl Ms Astrometry of Fundamental Catalogues Hans G. Walter, Ojars J. Sovers, 2012-12-06

Celestial fundamental catalogues are a prerequisite for the determination of absolute positions and motions in space Presently positional astrometry is at the watershed between classical fundamental catalogues based on moving reference stars and modern catalogues based on extragalactic reference objects with non measurable motion This book addresses the concepts and methods of the respective construction techniques leading to the stellar frame of the FK5 fifth fundamental catalogue and to the newly adopted extragalactic radio reference frame ICRF international celestial reference frame with its extension to optical wavelengths by the Hipparcos Catalogue While principal outlines of meridian circle observations are given emphasis is put in some detail on the VLBI technique as applied to astrometry and to the observational techniques used in the Hipparcos mission including the

tie of the originally non anchored rigid Hipparcos sphere into the ICRF

Developments in Astrometry and Their Impact on Astrophysics and Geodynamics Ivan I. Mueller,Barbara Kolaczek,2013-12-01 In this review talk I would like to report on the proper motion analysis which has been recently carried out together with M Soma and M Yoshizawa There has been a persistent demand in astronomy for accurate stellar positions and proper motions which are represented by an inertial reference system constructed on the basis of a set of consistent astronomical constants In the reference system the precessional constant plays a primary role In a series of papers Fricke 1967a b 1977a b has determined the luni solar precessional correction to Newcomb s value and the fictitious motion of the equinox which have been adopted in the IAU 1976 System of Astronomical Constants Based on the precessional correction and the equinoctial motion thus established the fundamental reference system the FK5 system Fricke et al 1988 for positions and proper motions has been constructed However for several years geodetic VLBI McCarthy Luzum 1991 and LLR Williams et al 1991 observations have been suggesting an additional correction to the luni solar precessional constant of the IAU 1976 System That is these observations indicate the precessional correction of 6 p 0 30 cent to the FK5 system But the observational period of the earth orientation is considered to be still insufficient to separate unambiguously the precessional change of the earth orientation from the nutation with the longest period of 18 6 years

Physics of the Galaxy and Interstellar Matter Helmut Scheffler,Hans Elsässer,2012-12-06 The present book is a translation of the original German edition published in 1982 with some minor corrections and improvements The guide to supplementary and advanced literature given in the Appendix however has been brought up to date This book is addressed primarily to students taking astronomy as a principal or subsidiary subject and to scientists of related fields but amateur astronomers should also be able to profit from it For most chapters an elementary knowledge of mathematics and physics will be sufficient however Chaps 5 and 6 impose somewhat greater requirements In addition the reader should already be acquainted with the basic concepts of stellar physics as treated in introductory books including the spectral types the system of stellar magnitudes and colours absolute magnitudes and luminosities the Hertzsprung Russell diagram and its interpretation A modern textbook should use SI units On the other hand the use of the cgs system is still the prevailing custom in astrophysics together with the special units of astronomy length is quoted in parsecs pc mass in solar masses M_{\odot} and time in years a We have therefore compromised and employed both cgs and SI units in this book whichever was the appropriate choice in each instance A table for conversion of cgs units into SI units and vice versa is given in the Appendix

Whether you're a student looking for textbooks, a professional seeking industry-specific manuals, or someone interested in self-improvement, these digital resources provide an efficient and accessible means of acquiring knowledge. Moreover, PDF books and manuals offer a range of benefits compared to other digital formats. PDF files are designed to retain their formatting regardless of the device used to open them. This ensures that the content appears exactly as intended by the author, with no loss of formatting or missing graphics. Additionally, PDF files can be easily annotated, bookmarked, and searched for specific terms, making them highly practical for studying or referencing. When it comes to accessing General Catalogue Of 33342 Stars Fo Volume 4 books and manuals, several platforms offer an extensive collection of resources. One such platform is Project Gutenberg, a nonprofit organization that provides over 60,000 free eBooks. These books are primarily in the public domain, meaning they can be freely distributed and downloaded. Project Gutenberg offers a wide range of classic literature, making it an excellent resource for literature enthusiasts. Another popular platform for

General Catalogue Of 33342 Stars Fo Volume 4 books and manuals is Open Library. Open Library is an initiative of the Internet Archive, a non-profit organization dedicated to digitizing cultural artifacts and making them accessible to the public. Open Library hosts millions of books, including both public domain works and contemporary titles. It also allows users to borrow digital copies of certain books for a limited period, similar to a library lending system. Additionally, many universities and educational institutions have their own digital libraries that provide free access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals, making them invaluable resources for students and researchers. Some notable examples include MIT OpenCourseWare, which offers free access to course materials from the Massachusetts Institute of Technology, and the Digital Public Library of America, which provides a vast collection of digitized books and historical documents. In conclusion, General Catalogue Of 33342 Stars Fo Volume 4 books and manuals for download have transformed the way we access information. They provide a cost-effective and convenient means of acquiring knowledge, offering the ability to access a vast library of resources at our fingertips. With platforms like Project Gutenberg, Open Library, and various digital libraries offered by educational institutions, we have access to an ever-expanding collection of books and manuals.
