**Empirical Foundations of Information and Software Science V** Pranas Zunde, D. Hocking, 2012-12-06 This is the proceedings of the Sixth Symposium on Empirical Foundations of Information and Software Sciences EFISS which was held in Atlanta Georgia on October 19 21 1988 The purpose of the symposia is to explore subjects and methods of scientific inquiry which are of common interest to information and software sciences and to identify directions of research that would benefit from the mutual interaction of these two disciplines The main theme of the sixth symposium was modeling in information and software engineering with emphasis on methods and tools of modeling The symposium covered topics such as models of individual and organizational users of information systems methods of selecting appropriate types of models for a given type of users and a given type of tasks deriving models from records of system usage modeling system evolution constructing user and task models for adaptive systems and models of system architectures This symposium was sponsored by the School of Information and Computer Science of the Georgia Institute of Technology and by the U S Army Institute for Research in Management Information Communications and Computer Sciences AIRMICS 17le

Editors vii CONTENTS 1 I KEYNOTE ADDRESS *Variation Principle in Informational Macrodynamics* Vladimir S. Lerner, 2012-12-06 Information Macrodynamics IMD belong to an interdisciplinary science that represents a new theoretical and computer based methodology for a system informational description and improvement including various activities in such areas as thinking intelligent processes communications management and other nonphysical subjects with their mutual interactions informational superimposition and the information transferred between interactions The IMD is based on the implementation of a single concept by a unique mathematical principle and formalism rather than on an artificial combination of many arbitrary auxiliary concepts and or postulates and different mathematical subjects such as the game automata catastrophe logical operations theories etc This concept is explored mathematically using classical mathematics as

calculus of variation and the probability theory which are potent enough without needing to develop new specified mathematical systemic methods. The formal IMD model automatically includes the related results from other fields such as linear nonlinear collective and chaotic dynamics stability theory theory of information physical analogies of classical and quantum mechanics irreversible thermodynamics and kinetics. The main IMD goal is to reveal the information regularities mathematically expressed by the considered variation principle VP as a mathematical tool to extract the regularities and define the model which describes the regularities. The IMD regularities and mechanisms are the results of the analytical solutions and are not retained by logical argumentation rational introduction and a reasonable discussion. The IMD information computer modeling formalism includes a human being as an observer carrier and producer of information with a restoration of the model during the object observations.
