- (3)階層化的產生Generating Stratification: 跨越「職位」或「階級」界線是否容易、是否頻繁？是否有永久的下層階級存在？智商、努力、學歷、自我期許、人際關係、與機運對於個人能夠找到什麼樣的工作或隸屬於何種階級有沒有關連？個人取得社會地位的過程是否受到其他社會或體制力量的影響？
How frequently do individuals move into new classes, occupations, or income groups? Is there a permanent "underclass?" To what extent are occupational outcomes determined by such forces as intelligence, effort, schooling, aspirations, social contacts, and individual luck?

Generating Images Of Stratification:

Generating Images of Stratification Thomas J. Fararo, Kenji Kosaka, 2003-08-31 Generating Images of Stratification is a self contained presentation of a theoretical research program that deals with a significant explanatory problem relating to social inequality and that constructs generative theoretical models in doing so In more detail Self contained presentation In respect to the background sociological facts and theoretical ideas and also the formal methods the book provides clear and simple accounts accompanied by examples A theoretical research program The emphasis is on theory development involving a series of theoretical models constructed within a core framework of principles and methods Deals with a significant explanatory problem relating to social inequality We know from research that how people perceive the stratification system of a society depends upon their position in that system So the problem is What process generates this regularity and thereby explains empirical generalizations about the social structuration of images Constructs generative theoretical models The book is an extended presentation of generative theory in sociology a formal method of producing effective theoretical explanations Generating Images of Stratification is of interest to mathematical sociologists and formal theorists in sociology sociologists interested in social stratification methodologists both in sociology and in other fields philosophers of social science and theoretical scientists and mathematicians who are interested in applying their analytical tools to social science topics *Generating Images of Stratification* Thomas J. Sedimentary Geology at Meridiani Planum, Mars S.W. Squyres, Andrew H. Knoll, 2006-01-17 In January of 2004 twin robotic explorers Spirit and Opportunity landed on Mars Expected to last for 90 days the two rovers explored the Martian surface for nearly two years Their objective was to search for evidence of ancient water on Mars and to determine if Mars ever had conditions that would have been suitable for life Opportunity landed on Meridiani Planum a smooth plateau near the Martian equator coming to rest in a small impact feature named Eagle Crater After leaving Eagle Crater Opportunity drove eastward to Endurance Crater a much larger crater that allowed access to deeper and older rocks At these locations Opportunity found strong evidence for ancient water on Mars This evidence includes blueberries small concretions rich in hematite that precipitated from water Other evidence includes rocks that were made largely of sulphate salts deposited when water evaporated and rocks that preserve ancient ripples that formed billions of years ago as water flowed over sand on Mars The conditions long ago at Meridiani Planum could have been suitable for some simple forms of life Whether life could have developed there however is a more difficult question

Principles of Digital Image Synthesis Andrew S. Glassner, 2014-06-28 Image synthesis or rendering is a field of transformation it changes geometry and physics into meaningful images Because the most popular algorithms frequently change it is increasingly important for researchers and implementors to have a basic understanding of the principles of image synthesis Focusing on theory Andrew Glassner provides a comprehensive explanation of the three core fields of study that come together to form digital image synthesis the human visual system digital signal processing and the interaction of matter and light Assuming no more than a basic background in calculus Glassner transforms his passion and expertise into a thorough presentation of each of these disciplines and their elegant orchestration into modern rendering techniques such as radiosity and ray tracing
