Ramon, Williams, Michael D., 2009-09-30 This book presents a comprehensive integrative and global view of what has been called the digital divide Provided by publisher Youth Studies and Generations Vitor Sérgio Ferreira, 2020-03-25

There is currently much discourse about generations in the public sphere A sequence of letters conflates generations and age cohorts born in the last few decades generation X Y or Z as well as multiple categories are used to describe today's young people as a generation that is distinct from its predecessors Despite the popularity of generational labels in media politics or even academia the use of generation as a conceptual tool in youth studies has been controversial This Special Issue allows readers to better understand the key issues regarding the use of generation as a theoretical concept and or as a social category in the field of youth studies shedding light on the controversies trends and cautions that go through it *The Limits of Expertise*

R. Key Dismukes, Benjamin A. Berman, Loukia Loukopoulos, 2017-03-02 Why would highly skilled well trained pilots make errors that lead to accidents when they had safely completed many thousands of previous flights The majority of all aviation accidents are attributed primarily to human error but this is often misinterpreted as evidence of lack of skill vigilance or conscientiousness of the pilots *The Limits of Expertise* is a fresh look at the causes of pilot error and aviation accidents arguing that accidents can be understood only in the context of how the overall aviation system operates The authors analyzed in great depth the 19 major U S airline accidents from 1991 2000 in which the National Transportation Safety Board NTSB found crew error to be a causal factor Each accident is reviewed in a separate chapter that examines events and crew actions and explores the cognitive processes in play at each step The approach is guided by extensive evidence from cognitive psychology that human skill and error are opposite sides of the same coin The book examines the ways in which competing task demands ambiguity and organizational pressures interact with cognitive processes to make all experts vulnerable to characteristic forms of error The final chapter identifies themes cutting across the accidents discusses the role of chance criticizes simplistic concepts of causality of accidents and suggests ways to reduce vulnerability to these catastrophes The authors' complementary experience allowed a unique approach to the study accident investigation with the NTSB cognitive psychology research both in the lab and in the field enormous first hand experience of piloting and application of aviation psychology in both civil and military operations This combination allowed the authors to examine and explain the domain specific aspects of aviation operations and to extend advances in basic research in cognition to complex issues of human performance in the real world Although *The Limits of Expertise* is directed to aviation operations the implications are clear for understanding the decision processes skilled performance and errors of professionals in many domains including medicine **Humanities Index**, 2002 *Cumulated Index Medicus*, 1999 Exploring Psychology,

Neuroactive metabolites of

ethanol: a behavioral and neurochemical synopsis Merce Correa, John D Salamone, Elio Acquas, 2015-02-11 Ethanol is a very elusive drug which has mechanisms of action that are diverse and relatively non selective Moreover ethanol has been demonstrated to be a biologically active substance by itself but also a pro drug of the neuroactive metabolites acetaldehyde and acetate Acetaldehyde has traditionally been known as a toxic substance with several effects on multiple systems However in the last few decades evidence has accumulated to reveal the specific and in some instances distinct neural actions of acetaldehyde and acetate that are in part responsible for some of the observed psychoactive effects of ethanol The present issue will address these challenges to provide an up to date synopsis of the behavioral and neurophysiological impact of the two direct metabolites of ethanol acetaldehyde and acetate In doing so this issue will present human and rodent

evidence on their behavioral and neurophysiological impact either when administered alone as drugs or when metabolically derived from their parent compound. Emphasis will be placed to stress the importance of the different enzymatic systems that intervene to produce these metabolites either peripherally and or directly in the brain. Similarly this Research Topic will be aimed at addressing some of the possible mechanisms of action of acetaldehyde and acetate in different brain areas and in different intracellular systems. Furthermore the issue will lay out some of the suggested mechanisms of action of ethanol and of its metabolites by which they form adducts with other molecules and neurotransmitters such as dopamine and opioids which lead to salsolinol and tetrahydropapaveroline respectively and their impact on the synthesis and actions of neuromodulators such as adenosine and the cannabinoid system.

Molecular Therapies of Cancer Georg F.

Weber, 2015-07-22. *Molecular Therapies of Cancer* comprehensively covers the molecular mechanisms of anti cancer drug actions in a comparably systematic fashion. While there is currently available a great deal of literature on anti cancer drugs books on the subject are often concoctions of invited review articles superficially connected to one another. There is a lack of comprehensive and systematic text on the topic of molecular therapies in cancer. A further deficit in the relevant literature is a progressive sub specialization that typically limits textbooks on cancer drugs to cover either pharmacology or medicinal chemistry or signal transduction rather than explaining molecular drug actions across all those areas. *Molecular Therapies of Cancer* fills this void. The book is divided into five sections: 1. Molecular Targeting of Cancer Cells, 2. Emerging and Alternative Treatment Modalities, 3. Molecular Targeting of Tumor Host Interactions, 4. Anti Cancer Drug Pharmacokinetics and 5. Supportive Therapies.

Exploring the Vertebrate Central Cholinergic Nervous System Alexander G.

Karczmar, 2007-04-05. Even if the weapons of mass destruction WMD and among them stocks of organophosphorus OP agents also referred to as war gases and nerve gases were not found in Iraq following the US Iraq war the relative ease with which these substances can be made from harmless precursors and the low cost of their manufacture will continue to fascinate powerful hungry ruthless dictators as well as multinational and international terrorists particularly as the close relationship between the OP agents and useful insecticides makes it easy to disguise the importation and purchase of small amounts of the precursors. Indeed the use by Saddam Hussein of a nerve gas against the Kurds and his possible employment of the OP agents during his war with Iran and the Sarin attack in the Tokyo underground by an extremist religious set magnetized the world with respect to the OP drugs. As these drugs exert their toxicity via their cholinergic action on the nervous particularly central nervous system it is no wonder that the research in the cholinergic field attracts and merits our intense attention. These considerations underlie the significance of this book as Alex Karczmar devotes an entire chapter of *Exploring the Vertebrate Central Cholinergic Nervous System* to anticholinesterases antiChEs and as he is an acknowledged expert in the field of cholinergic toxicity as well as a consultant to the Surgeon General of the U S Army.
