Piperno, F. Bouman, 1999 Flowering Plants. Eudicots Joachim W. Kadereit, Charles Jeffrey, 2007-07-12 This volume contains a complete systematic treatment of the flowering plant order Asterales This comprises 12 families with approx 1 720 genera and about 26 300 species Identification keys are provided for all genera and likely phylogenetic relationships are discussed extensively The wealth of information contained in this volume makes it an indispensable source for all working in the fields of pure and applied plant sciences Flavonoids of the Sunflower Family (Asteraceae) Bruce A. Bohm, Tod F. Stuessy, 2013-11-27 Flavonoids are secondary plant products that have previously been shown to be helpful in determining relationships among plant groups This work presents comprehensively the occurrence patterns of variation and systematic and evolutionary importance of flavonoids in the

sunflower family Asteraceae the largest family of flowering plants 23 000 species It gathers together the more than 2500 reports of flavonoids in Asteraceae published between 1950 to the present and interprets these data in context of new taxonomic especially generic alignments The authors discuss flavonoid patterns with reference to modern phylogenetic studies based on morphology and DNA data This book provides therefore the most exhaustive synthesis and evaluation of the systematic and evolutionary import of flavonoids ever accomplished for any large family of angiosperms *Plant Diversity and Complexity Patterns* Ib Friis, Henrik Balslev, 2005

Aspects of Brazilian Floristic Diversity Maria Franco Trindade Medeiros, Bárbara de Sá Haiad, 2022-10-30 Aspects of Brazilian Floristic Diversity From Botany to Traditional Communities offers a unique approach in floristic diversity of the Neotropical region specifically encompassing the Brazilian flora This volume combines both theoretical and applied aspects of scientific making knowledge in different perspectives of Botanical Science In this volume botanical specialists discuss the many different approaches of taxonomic reproductive ecological and ethnobotanical aspects of Brazilian floristic diversity thereby enlightening the global interest in Neotropical species in particular those from the Brazilian territory The book addresses relevant questions from many points of view including anatomy reproduction palinology conservation and ethnobotany creating an in depth perception of the flora in its complexity constitution The book provides a comprehensive outlook on Botany Sciences considering the history and traditional knowledge of plants and relating it to contemporary problems and concerns of flora conservation today With this current perspective this book reaches a vast audience from the research lines of Botany and encompasses a broader and interdisciplinary understanding of Aspects of Brazilian Floristic Diversity *Sesquiterpene Lactones* Valeria Patricia Sülsen, Virginia Susana Martino, 2018-06-07 This book addresses chemical and biological aspects related to sesquiterpene lactones STLs Experts in different fields have been invited to contribute on this class of compound s chemistry isolation and identification biological activities antibacterial antifungal antiviral antitrypanosomal antileishmanial antiplasmodial antiproliferative and antiinflammatory synthesis biosynthesis derivatization and QSAR analysis Taxonomic and chemotaxonomic aspects related to the Asteraceae family are also contributed The book begins by describing the chemical characteristics of STLs their classification in different skeleton types synthesis distribution in nature and their most important biological properties An overview of the group s main representatives based on their importance for human health as well as an update of the most recently isolated STLs follow The authors also provide an overview of the most common methods described in the literature for the extraction purification identification and structure elucidation of STLs while also highlighting more recently developed methods Furthermore experts in the field provide an in depth discussion of the most commonly employed in vitro and in vivo antiprotozoal assays against the different stages of parasites as well as STLs properties as anticancer agents in numerous cancer cell lines and animal models Lastly the book presents examples of the in vitro and in vivo activity of STLs and their mechanism of antiprotozoal action together with an analysis of ultrastructural

alterations observed using TEM techniques The book is aimed at scientists working on natural products both those investigating this particular group of compounds and those who wish to further explore its potential as new drugs for medical conditions such as protozoal diseases and cancer
