Silva, 2019-05-02 This Palgrave Pivot tells the transnational story of the astronomical observatory in the hills near Santiago Chile built in the early twentieth century through the efforts of astronomers from the Lick Observatory in California Venturing abroad to learn from largely unmapped Southern skies and hopefully answer lingering questions about the structure of the galaxy they planned a three year research expedition but ended up staying for more than twenty five years The history of the Mills Expedition offers a window onto the history of astronomy the challenges of scientific collaboration across national lines and the political and cultural contexts of early twentieth century Chile and the United States *James E. Keeler: Pioneer American Astrophysicist* Donald E. Osterbrock, 2002-08-22 The biography of James E Keeler 1857 1900 the leading astronomical spectroscopist of his generation *Biotic Borders* Jeannie N. Shinozuka, 2022-04-20 A rich and eye opening history of the mutual constitution of race and species in modern America In the late nineteenth century increasing traffic of transpacific plants insects and peoples raised fears of a biological yellow peril when nursery stock and other

agricultural products shipped from Japan to meet the growing demand for exotics in the United States Over the next fifty years these crossings transformed conceptions of race and migration played a central role in the establishment of the US empire and its government agencies and shaped the fields of horticulture invasion biology entomology and plant pathology In *Biotic Borders* Jeannie N Shinozuka uncovers the emergence of biological nativism that fueled American imperialism and spurred anti Asian racism that remains with us today Shinozuka provides an eye opening look at biotic exchanges that not only altered the lives of Japanese in America but transformed American society more broadly She shows how the modern fixation on panic about foreign species created a linguistic and conceptual arsenal for anti immigration movements that flourished in the early twentieth century Xenophobia inspired concerns about biodiversity prompting new categories of native and invasive species that defined groups as bio invasions to be regulated or annihilated By highlighting these connections Shinozuka shows us that this story cannot be told about humans alone the plants and animals that crossed with them were central to Japanese American and Asian American history The rise of economic entomology and plant pathology in concert with public health and anti immigration movements demonstrate these entangled histories of xenophobia racism and species invasions
