Genes And Insurance:

Genes and Insurance Marcus Radetzki, Marian Radetzki, Niklas Juth, 2003-11-06 The result of two key social developments in recent years are examined here the partial dismantling of the welfare state and the progress of genetics Genetic insights are increasingly valuable for risk assessment and insurers would like to use these insights to help determine premiums Combined with the fact that social welfare is being curtailed this could potentially create an uninsured high risk population Along with considerations of autonomy and privacy this is the basis for an ethical critique of insurer's access to information The result has often been regulation of such information but the authors argues that due to adverse selection regulation will not solve these problems and this may jeopardize the survival of private personal insurance Instead we should look towards the resurrection of social insurance a key component of the welfare state This will interest academic researchers as well as professionals involved with genetics and insurance

Genetics and Life Insurance Mark A. Rothstein, 2004 Experts discuss the economic legal and social issues surrounding the use of genetic testing in determining eligibility for life insurance Insurance companies routinely use an individual's medical history and family medical history in determining eligibility for life insurance this is part of the process of medical underwriting Insurers have also long used genetic information often derived from family history in underwriting But rapid advances in gene identification and genetic testing are changing the way we look at genetic information Should the results of genetic testing which might identify a predisposition toward disease not related to medical history be available to life insurance medical underwriters Few if any life insurers currently require genetic testing but there are no laws or regulations prohibiting its use *Genetics and Life Insurance* examines the complex economic legal and social issues surrounding the use of genetic information in life insurance underwriting The contributors are legal scholars representatives of the life insurance industry including an actuary and an insurance physician a geneticist a genetic counselor a philosopher and a consumer advocate They explore all aspects of an issue that has only recently drawn the attention of policymakers and the public The book opens with a report on the results of a public opinion poll on genetics and life insurance Succeeding chapters present the insurer perspective a discussion of the economics of risk selection in life insurance background information on the process of underwriting a scientific analysis of genetic risks and mortality rates a philosophical discussion of fairness and genetic underwriting the viewpoints of consumers and genetics counselors a comparison of different international policy approaches to the issue and a legal analysis of antitrust implications when insurers collaborate in setting standards for medical underwriting In the final chapter the editor addresses various policy options examining the pros and cons of each one and assessing their political feasibility

Human Genes and Neoliberal Governance Antoinette Rouvroy, 2007-12-13 Original and interdisciplinary this is the first book to explore the relationship between a neoliberal mode of governance and the so called genetic revolution Looking at the knowledge power relations in the post genomic era and addressing the pressing issues of genetic privacy and discrimination in the context of neoliberal

governance this book demonstrates and explains the mechanisms of mutual production between biotechnology and cultural political economic and legal frameworks In the first part Antoinette Rouvroy explores the social political and economic conditions and consequences of this new perceptual regime In the second she pursues her analysis through a consideration of the impact of geneticization on political support of the welfare state and on the operation of private health and life insurances Genetics and neoliberalism she argues are complicit in fostering the belief that social and economic patterns have a fixed nature beyond the reach of democratic deliberation whilst the characteristics of individuals are unusually plastic and within the scope of individual choice and responsibility This book will be of interest to all students of law sociology and politics

Genetics and Insurance FRANCOIS EWALD,T. McGleenan,Urban Wiesing,2023-05-31 Compiled by a well known and respected team of editors and contributors from interdisciplinary backgrounds this book has its origins in the Euroscreen project a research project funded by the European Commission to examine the legal and ethical issues arising from the use of genetic testing and screening since 1990 Contributors from members of a sub group look at the likely impact of genetic testing on insurance It will be published at a point when the significant controversy surrounding this issue will have intensified throughout the European Union Although taking a European perspective it addresses US issues where there is a strong interest in comparative legislative strategies taking a themed approach this book looks comprehensively at the basis issues with an analytical rather than a descriptive approach

Genetic Information Alison K. Thompson,Ruth F. Chadwick,2007-07-23 It is difficult to think of an example of an advancement in the biological sciences that has had an impact on society similar to that of the new genetics Recent developments in biotechnology have occasioned much discussion among academics professionals and lay people alike In particular many questions and concerns have arisen over the acquisition access and control of genetic information There are several reasons why the new genetics has commanded such widespread attention and why it is now the subject of considerable debate Special reference is given in this volume to the implications of genetic information for five different subject areas eugenics the insurance industry the commercialisation of genetic testing strategies for raising public awareness and the value of theoretical ethical and sociological frameworks in the debate This diverse collection of papers attempts to address and critically discuss issues surrounding the control of and access to genetic information from ethical medical legal and theoretical points of view The first and shortest section of the book attempts to address concerns over the eugenic potential of new biotechnologies It also provides a historical context for the debate for controversy over the subject of eugenics predates the current debate over genetic information by a considerable length of time Indeed by the time the first patent was issued for Chakrabarty's strain of oil eating bacteria in the early 1970s the term eugenics had already acquired strong pejorative connotations

Bio-Objects Niki Vermeulen,Sakari Tamminen,Andrew Webster,2016-04-15 Increasing knowledge of the biological is fundamentally transforming what life itself means and where its boundaries lie New developments in the biosciences especially through the

Genetic Discrimination and Genetic Privacy in a Comparative Perspective Janneke H. Gerards, A. W. Heringa, Heleen L. Janssen, 2005 During the last decades a better understanding of the influence of genetic factors on the onset of illness and disease has evolved Unfortunately however the information revealed by genetic tests is not always accurate and reliable and its probabilistic value is often limited Throughout the world the possibility of genetic testing and the availability of individual genetic information have therefore caused increasing social concern especially since many actors outside the medical profession such as health and life insurance companies and employers have shown a growing interest in individual genetic information In many states as well as on the international level there is an ongoing debate about the balance that should be struck between the protection of the individual against misuse of genetic information and the interests of social actors and genetic research institutes and about the policy options that are at hand to reduce the risks that are created by the

availability of genetic information This book offers some clarity as to the choices that have been made in various legal systems both national and international with respect to the regulation of genetic information On the basis of an elaborate analysis of relevant legislation policy approaches and case law in the United States the various European states and on the international level the book aims to provide insight in the issues that must be deemed relevant in considering and eventually introducing regulative measures with respect to genetic information Clinical Ethics at the Crossroads of Genetic and Reproductive Technologies Sorin Hostiuc, 2018-08-07 Clinical Ethics at the Crossroads of Genetic and Reproductive Technologies offers thorough discussions on preconception carrier screening genetic engineering and the use of CRISPR gene editing mitochondrial gene replacement therapy sex selection predictive testing secondary findings embryo reduction and the moral status of the embryo genetic enhancement and the sharing of genetic data Chapter contributions from leading bioethicists and clinicians encourage a global holistic perspective on applied challenges and the moral questions relating the implementation of genetic reproductive technology The book is an ideal resource for practitioners regulators lawmakers clinical researchers genetic counselors and graduate and medical students As the Human Genome Project has triggered a technological revolution that has influenced nearly every field of medicine including reproductive medicine obstetrics gynecology andrology prenatal genetic testing and gene therapy this book presents a timely resource Provides practical analysis of the ethical issues raised by cutting edge techniques and recent advances in prenatal and reproductive genetics Contains contributions from leading bioethicists and clinicians who offer a global holistic perspective on applied challenges and moral questions relating to genetic and genomic reproductive technology Discusses preconception carrier screening genetic engineering and the use of CRISPR gene editing mitochondrial gene replacement therapy ethical issues and more

Biotechnology and Genetic Engineering Facts On File, Incorporated, 2008 Provides an overview chronology of events glossary and annotated bibliography on biotechnology and genetic engineering **Handbook of Genetic Communicative Disorders** Sanford E. Gerber, 2001-05-11 Many professionals in the communicative sciences are relative newcomers to the understanding of genetics as it applies to communicative disorders A speech language clinician certainly can diagnose and treat stuttering for example but that clinician may not be fully aware of the role of a genetic counselor for the family of a stutterer An audiologist may be able to assess a hearing impairment but an understanding of the underlying genetics of that impairment would make that person a better audiologist The medical geneticist similarly could have an inadequate appreciation of how our genes may affect language function All of these professionals need a source that brings together essential ideas from related disciplines This is a book about human communication both normal and disordered and how our communication abilities are affected by our genes Many probably most communicative disorders are of genetic origin even if not exclusively genetic A knowledge of genetics therefore is essential to our understanding of communication of communicative disorders of how such disorders come about and of how to deal with them This is the only book to consider

the genetics of communicative disorders from a broad perspective It examines genetics embryology and epidemiology along with study of the hearing speech and language disorders themselves It also introduces review of issues relevant to genetic counseling and ethics It is a unique and comprehensive work whose contributors are the leading experts in their respective disciplines Only book available to consider all communicative disorders Unparalleled scrutiny of the sciences basic to the genetics of communicative disorders Specific attention paid to clinical and ethical issues

Genetic Privacy: An Evaluation Of The Ethical And Legal Landscape Terry Sheung-hung Kaan, Calvin Wai-loon Ho, 2013-07-04 Privacy is an unwieldy concept that has eluded an essentialised definition despite its centrality and importance in the body of bioethics The compilation presented in this volume represents continuing discussions on the theme of privacy in the context of genetic information It is intended to present a wide range of expert opinion in which the notion of privacy is examined from many perspectives in different contexts and imperatives and in different societies with the hope of advancing an understanding of privacy through the examination and critique of some of its evolving component concepts such as notions of what constitute the personal the context of privacy the significance and impact of the relational interests of others who may share the same genetic inheritance and mechanisms for the protection of privacy as well as of their limitations among others More specifically the discussions in this volume encourages us to think broadly about privacy as encompassing values that are entailed in the sociality of context and of relations and also as freedom from illegitimate and excessive surveillance A long standing question that continues to challenge us is whether genetic information should be regarded as exceptional as it is often perceived A conclusion that could be derived from this volume is that while genetic information may be significant it is not exceptionally so The work presented in this volume underlines the continuing and growing relevance of notions of privacy to genomic science and the need to take ownership of a genetic privacy for the future through broad rigorous and open discussion Contributors Alastair V Campbell Benjamin Capps Jacqueline JL Chin Oi Lian Kon Kenji Matsui Thomas H Murray Nazirudin Mohd Nasir Dianne Nicol Anh Tuan Nuyen Onora O'Neill Margaret Otlowski Yvette van der Eijk Chunshui Wang Ross S White
