the underlying causes the origins and the extent of the problem of human aneuploidy and whether exposure to environmental agents is associated with an increased incidence of aneuploidy in humans Basic research findings in the area of mitosis and meiosis were presented and related to possible mechanisms of how aneuploidy may be produced spontaneously and chemically A survey of data regarding the chemical induction of aneuploidy in experimental organisms was presented Outstanding scientists from different fields were invited to cover a broad perspective of aneuploidy from the molecular aspects to the human situation We hope that the publication of the proceedings will share the enthusiasm of the meeting and its scientific content The topic of aneuploidy has received little attention and it is the purpose of this Volume to establish a scientific basis for assessing health risks posed by environmental exposures to aneuploidy inducing chemicals
