Global Environmental Politics Jean-Frédéric Morin, Amandine Orsini, Sikina Jinnah, 2020 Global Environmental Politics provides a fully up to date and comprehensive introduction to the most important issues dominating this fast moving field. Going beyond the issue of climate change the textbook also introduces students to the pressing issues of desertification, trade in hazardous waste, biodiversity protection, whaling, acid rain, ozone depletion, water consumption and over fishing. Importantly the authors pay particular attention to the interactions between environmental politics and other governance issues such as gender, trade, development, health, agriculture and security. Handbook of Global Environmental Politics Peter Dauvergne, 2012-01-01 The second edition of this Handbook contains more than 30 new and original articles as well six essential updates by leading scholars of global environmental politics. This landmark book maps the latest theoretical and empirical research in this energetic and growing field. Captured here are the pioneering and lively debates over concerns for the health of the planet and how they might best be addressed. The introduction explores the intellectual trends and evolving parameters in the field of global environmental politics. It makes a case for an expansive definition of the field, one that embraces an interdisciplinary literature on the connections between global politics and environmental change. The remaining chapters are divided into four broad themes: states and cooperation, global governance, the political economy of governance and knowledge and ethics, with each section covering key emerging issues. In depth explorations are given to topics such as climate change, multinational corporations, international agreements and UN organizations, regulations and business standards, trade and international finance, multilevel and transnational governance and ecological citizenship. Handbook of Global Environmental Politics Second Edition is a comprehensive review of the field and offers cutting edge ideas for further research. As such, scholars, students and policymakers will find themselves looking to it for many years to come. **Global Environmental Politics** Johannes Urpelainen, 2022-07-29 Emerging economies have fundamentally transformed global environmental politics. Led by China and India, they increasingly make or break international negotiations which now require agreement among a large number of governments with widely varied preferences. Emerging economies which still suffer from widespread poverty and frequently struggle with policy implementation, often feel that Western led initiatives neglect their needs. What does the global environmental policy landscape look like in the age of a rising Global South? This book explains why emerging economies have come to dominate global environmental politics and examines the implications for future international cooperation. Johannes Urpelainen shows that emerging economies continue to prioritize economic growth and often have limited institutional capacity to contain the environmental destruction that it causes. However, he argues, despite barriers to cooperation, innovative bargaining and institutional design offer a way forward. Bottom up agreements that respect national sovereignty and invest in capacity building hold more promise than traditional top down treaties with binding commitments. The book features detailed discussions of attempts to address hazardous chemicals, loss of biodiversity,

and climate change a comparative analysis of China and India and case studies of nine other emerging economies around the world Global Environmental Politics is an essential forward looking overview of today s most pressing international issue

mandate Climate Change in South Asia Baniateilang Majaw, 2020-05-28 This volume studies the challenges of climate change in South Asia and examines the role of the South Asian Association for Regional Cooperation SAARC in addressing them. It highlights the dangers posed by climate change in South Asia and underlines the need to strengthen and intensify regional cooperation to preserve, protect and manage the diverse and fragile eco systems of the region. The book examines policies and initiatives of the SAARC in tackling these issues and also analyzes their implementation by member countries. In the late 2000s, ordinary citizens in Jamaica and Mexico demanded that government put a stop to lucrative but environmentally harmful economic development activities: bauxite mining in Jamaica and large scale tourism and overfishing on the eastern coast of the Yucatán Peninsula. In each case, the catalyst for the campaign was information gathered and disseminated by transnational advocacy networks (TANs) of researchers, academics and activists. Both campaigns were successful despite opposition from industry supporters. Meanwhile, simultaneous campaigns to manage land in another part of the Yucatán and to conserve migratory birds in Egypt had far less success. In this book, Kemi Fuentes George uses these four cases to analyze factors that determine the success or failure of efforts by TANs to persuade policymakers and private sector actors in developing countries to change environmental behavior. Fuentes George argues that in order to influence the design and implementation of policy, TANs must generate a scientific consensus, create social relationships with local actors and advocate for biodiversity in a way that promotes local environmental justice. Environmentally just policies would allow local populations access to their lands provided they use natural resources sustainably. Justice claims are also more likely to generate needed support among local groups for conservation projects. In their conservation efforts, Jamaica, Mexico and Egypt were attempting to meet their obligations under the UN Convention on Biological Diversity and other regional agreements. Fuentes George's innovative analysis shows the importance of local environmental justice for the implementation of international environmental treaties.

Understanding Global Environmental Politics M. Paterson, 2000-04-07 *Understanding Global Environmental Politics* develops a new critical approach to global environmental politics It argues that the major power structures of world politics are deeply problematic in ecological terms and that they cannot be easily used to resolve major environmental challenges such as global warming Instead of simply advocating the construction of new international institutions to respond to such challenges therefore the book argues that the construction of alternative social and political structures is necessary
