Michael A. Summerfield, 1991 **Geomorphology and Global Tectonics** Michael A. Summerfield, 2000-04-07 Presents the state of current research on the inter relationships between global tectonics and macroscale landscape development across a wide range of topics and study areas The last 10 years have witnessed a remarkable growth in interest in the relationships between global tectonics and the Earth's macroscale topographic features This new research emphasis has emerged from a range of practitioners within the earth sciences including geophysicists concerned with what can be learnt about tectonic processes from their topographic effects geologists interested in the factors controlling erosion and the supply of material to sedimentary basins and geomorphologists wanting to understand the role of tectonics in landscape evolution Various technical developments and new sources of data have also contributed to these developments such as the construction of coupled tectonic surface process numerical models of large scale landscape development the creation of large area high resolution digital elevation models and the derivation of long term denudational records using methods such as thermochronology This book presents an overview of innovative research in the area and provides directions for future research Each chapter provides up to date surveys of key research questions reports on important current work and highlights outstanding research issues It will be invaluable to those across the earth science community who are interested in the relationships between tectonics and geography

Landscapes and Geomorphology Andrew Goudie, Heather Viles, 2010-08-26 What were the landscapes of the past like What will landscapes look like in the future Landscapes are all around us but most of us know very little about how they have developed what goes on in them and how they react to changing climates tectonics and human activities Examining what landscape is and how we use a range of ideas and techniques to study it Andrew Goudie and Heather Viles demonstrate how geomorphologists have built on classic methods pioneered by some great 19th century scientists to examine our Earth Using examples from around the world including New Zealand the Tibetan Plateau and the deserts of the Middle East they examine some of the key controls on landscape today such as tectonics and climate as well as humans and the living world They also discuss some key landscape detectives from the past including Charles Darwin who did some important but often overlooked research on landscape Concluding with the cultural importance of landscape and exploring how this has led to the conservation of much earth heritage they delve into the future and look at how we can predict the response of landscapes to climate change in the future

Periglacial and Paraglacial Processes and Environments Jasper Knight,Stephan Harrison,2009 Periglacial and paraglacial environments located outside ice sheet margins but responding to similar climate forcings are key to identifying climate change effects upon the Earth system These environments are relicts of cold Earth processes and so are most sensitive to global warming Changes in the distribution and thickness of permafrost in continental interiors have implications for ecosystem and landscape stability Periglacial Alpine environments are experiencing increased rockfall and mass movement leading to rock glacier instability and sediment release to downstream rivers In turn these landscape effects impact on natural hazards and human activities in these sensitive and geologically transient environments **Treatise on Geomorphology** ,2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune

The Apocalyptic Dimensions of Climate Change Jan Alber,2021-09-07

Climate change and the apocalypse are frequently associated in the popular imagination of the twenty first century This collection of essays brings together climatologists theologians historians literary scholars and philosophers to address and critically assess this association The contributing authors are concerned among other things with the relation between cultural and scientific discourses on climate change the role of apocalyptic images and narratives in representing

environmental issues and the tension between reality and fiction in apocalyptic representations of catastrophes By focusing on how figures in fictional texts interact with their environment and deal with the consequences of climate change this volume foregrounds the broader social and cultural function of apocalyptic narratives of climate change By evoking a sense of collective human destiny in the face of the ultimate catastrophe apocalyptic narratives have both cautionary and inspirational functions Determining the extent to which such narratives square with scientific knowledge of climate change is one of the main aims of this book Contemporary Physical Geography Nater Singh Raina,2012 **Geomorphological**

Hazards and Disaster Prevention Irasema Alcántara-Ayala,Andrew S. Goudie,2010-03-04 Human activities have had a huge impact on the environment and landscape through industrialisation and land use change leading to climate change deforestation desertification land degradation and air and water pollution These impacts are strongly linked to the occurrence of geomorphological hazards such as floods landslides snow avalanches soil erosion and others Geomorphological work includes not only the understanding but the mapping and modelling of Earth s surface processes many of which directly affect human societies In addition geomorphologists are becoming increasingly involved with the dimensions of societal problem solving through vulnerability analysis hazard and risk assessment and management The work of geomorphologists is therefore of prime importance for disaster prevention An international team of geomorphologists have contributed their expertise to this volume making this a scientifically rigorous work for a wide audience of geomorphologists and other Earth scientists including those involved in environmental science hazard and risk assessment management and policy

Williams, 2022-09-11 These essays trace the evolution of British geography as an academic discipline during the last hundred years and stress how the study of the world we live in is fundamental to an understanding of its problems and concerns. Never before has such an ambitious and wide-ranging review been attempted and never before has it been done with so much knowledge and passion. The principal themes covered in this volume are those of environment, place and space and the applied geography of map making and planning. The volume also addresses specific issues such as disease, urbanization, regional viability and ethics and social problems.
