relevant material even when you don't know how to specify the best search terms in advance The book's overall structuring by nine methods of searching that are applicable in any subject area rather than by subjects or by types of literature is unique among guides to research Also unique is the range and variety of concrete examples of what to do and of what not to do The book is not about the Internet it is about the best alternatives to the Internet the sources that are not on the open Web to begin with that can be found only through research libraries and that are more than ever necessary for any kind of substantive scholarly research More than any other research guide available this book directly addresses and provides solutions to the serious problems outlined in recent studies documenting the profound lack of research skills possessed by today's digital natives *Statistical Abstract of the United States* ,2002 **Marketing Information Guide** ,1959
