Assessments of Regional and Global Environmental Risks Alexander E. Farrell, Jill Professor Jäger, 2010-09-30. As environmental challenges grow larger in scale and implications, it is increasingly important to apply the best scientific knowledge in the decision-making process. Editors Farrell and J. Ger present environmental assessments as the bridge between the expert knowledge of scientists and engineers on the one hand and decisionmakers on the other. When done well, assessments have a positive impact on public policy, the strategic decisions of private firms, and ultimately the quality of life for many people. This book is the result of an international interdisciplinary research project to analyze past environmental assessments and understand how their design influenced their effectiveness in bringing scientific evidence and insight into the decision-making process. The case studies in the book feature a wide range of regional and global risks, including ozone depletion, transboundary air pollution, and climate change. Assessments of Regional and Global Environmental Risks offers several important contributions. It provides a clear account of the choices faced in the design of environmental assessments and a clear description of the lessons learned from past assessments. It illustrates why assessments are social processes, not simply reports. And while they identify no universal one-size-fits-all design, the authors find that to be effective, environmental assessments must be viewed by those who produce and use them as being salient, credible, in their scientific support, and legitimate or fair in design and execution.

Global Environmental Risks Graciela Chichilnisky, G. M. Heal, 1993 *Research Handbook on International Environmental Law* Fitzmaurice, Malgosia, Brus, Marcel, Merkouris, Panos, Rydberg, Agnes, 2021-11-12. This thoroughly updated and revised second edition of this foundational Handbook combines practical and theoretical analyses to cover a wide array of cutting edge issues in international environmental law (IEL). It provides a comprehensive view of the complexity of IEL both as a field in its own right and as part of the wider system of international law.

Risk and Social Theory in Environmental Management Tom Measham, Stewart Lockie, 2012. Risk and Social Theory in Environmental Management marks a timely contribution given that environmental management is no longer just about protecting pristine ecosystems and endangered species from anthropogenic harm; it is about calculating and managing the risks to human communities of rapid environmental and technological change. First, the book provides a solid foundation of the social theory underpinning the nature of risk, then presents a rethinking of key concepts and methods in order to take more seriously the biophysical embeddedness of human society. Second, it presents a rich set of case studies from Australia and around the world, drawing on the latest applied research conducted by leading research institutions. In so doing, the book identifies the tensions that arise from decision making over risk and uncertainty in a contested policy environment and provides crucial insights for addressing on the ground problems in an integrated way.

First volume to address environmental risk from a social science perspective. Latest theoretical developments. In depth case studies of contemporary issues e.g. climate change, water shortages.

Global Environmental Risks Graciela Chichilnisky, Geoffrey M. Heal, 2011. Climate risks have always been amongst the most important faced by human societies. Today the concern has new elements: the global nature of possible changes and the fact that they are driven by human activity. The risks posed by climate change are therefore endogenous and so outside of the classical economic framework for analyzing risk allocation. They are also poorly understood and correlated and concern events that may be irreversible. We review the problem that these characteristics pose for efficient allocation of such risks and conclude that financial markets for suitable securities together with mutual insurance contracts can provide effective insurance. We also ask how much a society should spend reducing the probability of climate change, a question that cannot be asked in the Arrow-Debreu framework in which the frequencies of events cannot be influenced by agents.
