Convergence Morten Balling, Elizabeth Hennessy, Richard O'Brien, 2013-11-11 for many years been heavily dependent on bank financing and this situation has not changed fundamentally In his paper on stock exchange governance in the European Union Guido Ferrarini discusses the relative merits of member and investor ownership and compares stock exchange regulation in a number of EU countries Faced with increasing competition amongst themselves and against other enterprises that offer transaction services such as proprietary trading systems it is essential for European stock exchanges to improve

their efficiency and to generate volume Large investments in new information technology are necessary in order to preserve competitiveness in a global financial market The implementation of the ISD has accelerated cross border transaction activity of member firms and investors and strengthened the pressure for convergence of national stock exchange laws in the EU In their paper Francesco Giavazzi and Marco Battaglini look at the role played by banks in privatization processes Banks can be involved in such processes in several ways They may themselves be the objects of privatization since in many countries a significant fraction of the banking industry is publicly owned This is the case in France Spain and Italy But banks can also be important buyers of the equity of industrial firms sold by the government if they are allowed to do so The authors characterize privatizations as a very good opportunity to set up the right environment for the development of new financial intermediaries and in general for a sound corporate governance system

Stock Market Anomalies Victor Silverio Posadas Hernandez,2007-11-03 Interest in the Latin American emerging markets LAEM has increased considerably in recent years However in their stock markets the price determination process and how it compares with that of developed

markets is still an open issue. Thus far the LAEM and most of the emerging markets may have as it is often claimed paid a price for being too different that is for having weak institutions, failed macroeconomic programs, political instability, poor corporate governance, and high trading costs. Although they may have indeed suffered for these reasons, this claim ignores the heterogeneity that exists among emerging markets regarding their market development and institutional infrastructure. Yilmaz (2001) Practitioners still think that the LAEM may lower an international investor's unconditional portfolio risk. In view of this belief concerning emerging markets, the present thesis seeks to answer three sets of questions:

1. What are the investment laws in the LAEM and how do they compare to developed countries?
2. How heterogeneous are the implicit trading costs in the LAEM and which factors are responsible for the heterogeneity? And how different is the implicit trading cost of the LAEM from the developed stock markets?
3. Does the predictability of stock returns in the LAEM differ from those documented for developed markets?

A large number of investigations in modern financial economics have been dedicated to quantifying the trade-off between risk and expected returns of financial securities. Performance Evaluation and Attribution of Security Portfolios Bernd R. Fischer, Russ Wermers, 2012-12-31 Just how successful is that investment? Measuring portfolio performance requires evaluation: measuring portfolio results against benchmarks and attribution: determining individual results of the portfolio's parts. In this book, a professor and an asset manager show readers how to use theories, applications, and real data to understand these tools. Unlike others, Fischer and Wermers teach readers how to pick the theories and applications that fit their specific needs. With material inspired by the recent financial crisis, Fischer and Wermers bring new clarity to defining investment success. Gives readers the theories and the empirical tools to handle their own data. Features practice problems formerly from the CFA Program curriculum.
