Poorly Soluble Drugs Gregory K. Webster, Robert G. Bell, J. Derek Jackson, 2017-01-06 This book is the first text to provide a comprehensive assessment of the application of fundamental principles of dissolution and drug release testing to poorly soluble compounds and formulations. Such drug products are, *vis-à-vis* their physical and chemical properties, inherently incompatible with aqueous dissolution. However, dissolution methods are required for product development and selection as well as for the fulfillment of regulatory obligations with respect to biopharmaceutical assessment and product quality understanding. The percentage of poorly soluble drugs defined in classes 2 and 4 of the Biopharmaceutics Classification System (BCS) has significantly increased in the modern pharmaceutical development pipeline. This book provides a thorough exposition of general method development strategies for such drugs, including instrumentation and media selection, the use of compendial and non compendial techniques in product development and phase appropriate approaches to dissolution development. Emerging topics in the field of dissolution are also discussed, including biorelevant and biphasic dissolution, the use of enzymes in dissolution testing, dissolution of suspensions and drug release of non oral products. Of particular interest to the industrial pharmaceutical professional, a brief overview of the formulation and solubilization techniques employed in the development of BCS class 2 and 4 drugs to overcome solubility challenges is provided and is complemented by a collection of chapters that survey the approaches and considerations in developing dissolution methodologies for enabling drug delivery technologies including nanosuspensions, lipid based formulations and stabilized amorphous drug formulations.

Nano-Biomaterials For Ophthalmic Drug Delivery Yashwant Pathak, Vijaykumar Sutariya, Anjali A. Hirani, 2016-11-12 This consolidated reference book addresses the various aspects of nano biomaterials used in ophthalmic drug delivery, including their characterization, interactions with the ophthalmic system and applications in treatments of the ophthalmic diseases and disorders. In the last decade, a significant growth in

polymer sciences nanotechnology and biotechnology has resulted in the development of new nano and bioengineered nano bio materials These are extensively explored as drug delivery carriers as well as for implantable devices and scaffolds At the interface between nanomaterials and biological systems the organic and synthetic worlds merge into a new science concerned with the safe use of nanotechnology and nano material design for biological applications For this field to evolve there is a need to understand the dynamic forces and molecular components that shape these interactions While it is impossible to describe with certainty all the bio physicochemical interactions at play at the interface we are at a point where the pockets of assembled knowledge are providing a conceptual framework to guide this exploration and review the impact on future product development The book is intended as a valuable resource for academics and pharmaceutical scientists working in the field of polymers polymers materials for drug delivery drug delivery systems and ophthalmic drug delivery systems in addition to medical and health care professionals in these areas **Bones and Cartilage** Brian K.
