Gender in Science, 2011 **Sexual Visions** L. J.

Jordanova,1993 Demonstrates that gender as a metaphor has had an exceptionally vigorous life in the history of biological and medical sciences *Who Succeeds in Science?* Gerhard Sonnert,Gerald James Holton,1995 Why don t more women become scientists And why do those who do become scientists often face more difficulties than their male counterparts Every year about a quarter of a million young men and women in the United States receive their first academic degree in science mathematics or engineering A small fraction will eventually become research scientists But many who start out with that goal fail to reach it for reasons that may have less to do with their scientific ability than with their gender Drawing on a wealth of information 699 questionnaires and 200 interviews from men and women who gave every promise of scientific achievement Gerhard Sonnert and Gerald Holton illuminate the partly gender driven dynamics of the leaky scientific pipeline At the heart of this book are gripping personal life stories of ten women and ten men half became highly successful scientists the rest left research science In their own voices they talk candidly about their career paths the obstacles and assists they encountered the difficulties and rewards of attempting to combine a family life with a science career This highly readable analysis of the gender dimension in scientific careers and its clear headed advice will be of great interest to everyone considering a career in science as well as to teachers parents and active scientists Academics in sociology of science and gender studies as well as decision makers in the areas of human resources and science policy will also welcome its discussions of general issues and policy recommendations **Gender, Science and Innovation** Helen Lawton Smith,Colette Henry,Henry Etzkowitz,Alexandra Poulouvasilis,2020-01-31 Gender Science and Innovation explores the contemporary challenges facing women scientists in academia and develops effective strategies to improve gender equality Addressing an important gap in current knowledge chapters offer a range of international perspectives from diverse contexts countries and institutional settings This book is an essential contribution to the literature for academics researchers and policy makers concerned with improving gender equality in academia and seeking to learn from the experiences of others Gender of Science + Mysearchlab Janet A. constructions of gender through different eras have restricted women's access to science. The twentieth century, especially its second half, witnessed certain important changes in terms of women's status in society. This book includes essays by leading academics and researchers from different parts of the world who discuss gender and science in their society and explore the relevance of gender theories. The book is divided into two broad sections. The first section provides conceptual reflections on gendered science and the second section examines the gender-science relationship using examples from various cultural contexts. The book tries to strike a balance between analyses of the gender dimension of science itself and the role of the wider social, economic and cultural factors. This interdisciplinary volume will be an important resource for graduate students and research scholars of gender studies, social history, psychology and sociology. Those interested in gender and science as well as cross-cultural issues will also find this book useful.

Gender, Science and Technology: Perspectives from Africa Catherine Wawasi Kitetu, 2008. This sixth volume of the CODESRIA Gender Series is a collection of discourses, perspectives, practices and policies on the role of the female gender in science and technology, particularly in the African context. Although widely advocated as the indisputable foundation for political and economic power in the modern world, science and technology remains marked by various layers and dimensions of gender inequality that work to the disadvantage of girls and women. Despite the fact that a lot of awareness has been created and gender issues are now more readily acknowledged by various development initiatives in Africa, participation in science and technology still remains a hurdle as far as girls and women are concerned. A common theme that runs through the book is how feminine identities, ideologies of domesticity and gender stereotypes and the inadequacy or lack of clear policies facilitate the invisibility of women in science and technology. This notwithstanding, women have never ceased devising clever and ingenious ways that would enable them to master nature from the margins. The book provides a window onto the current state of female participation in science and technology in Africa, along with an analysis of the historical backgrounds, current educational and professional contexts and prospects for the future. While it is evident that more research needs to be done with more groups in different regions, this volume brings together a rich and inspiring collection of qualitative insights on gender, science and technology in Africa. The CODESRIA Gender Series acknowledges the need to challenge the masculinities underpinning the structures of repression that target women. The series aims to keep alive and nourish African social science research with insightful research and debates that challenge conventional wisdom, structures and ideologies that are narrowly informed by caricatures of gender realities. It strives to showcase the best in African gender research and provide a platform for emerging new talents to flower.

Seeing Nature Through Gender Virginia Scharff, 2003 Environmental history has traditionally told the story of Man and Nature Scholars have too frequently overlooked the ways in which their predominantly male subjects have themselves been shaped by gender Seeing Nature through Gender here reintroduces gender as a meaningful category of analysis for environmental history showing how women's actions desires and choices have shaped the world and seeing men as gendered actors as well In

thirteen essays that show how gendered ideas have shaped the ways in which people have represented experienced and consumed their world Virginia Scharff and her coauthors explore interactions between gender and environment in history Ranging from colonial borderlands to transnational boundaries from mountaintop to marketplace they focus on historical representations of humans and nature on questions about consumption on environmental politics and on the complex reciprocal relations among human bodies and changing landscapes They also challenge the ecofeminist position by challenging the notion that men and women are essentially different creatures with biologically different destinies Each article shows how a person or group of people in history have understood nature in gendered terms and acted accordingly often with dire consequences for other people and organisms Here are considerations of the ways we study sexuality among birds of William Byrd s masking sexual encounters in his account of an eighteenth century expedition of how the ecology of fire in a changing built environment has reshaped firefighters own gendered identities Some are playful as in a piece on the evolution of snow bunnies to shred betties Others are dead serious as in a chilling portrait of how endocrine disrupters are reinventing humans animals and water systems from the cellular level out Aiding and adding significantly to the enterprise of environmental history Seeing Nature through Gender bridges gender history and environmental history in unexpected ways to show us how the natural world can remake the gendered patterns we ve engraved on ourselves and on the planet
