Gene Conservation and Exploitation J. Perry Gustafson, Rudi Appels, P. Raven, 2013-06-29 The potato *Solanum tuberosum* L. tuber is a major food source in many countries of the world and subsequently potato has been the target of a good deal of effort directed at engineering disease and herbicide tolerance and improvements in various crop characteristics. Consequently investigations into the regulation of gene expression in tubers is relevant to these endeavours as tubers are the main target organ for modification of gene expression. We have been interested in the regulation of genes in tubers for these reasons. Morphologically tubers are modified stems which have enlarged radially by limited cell division and substantial expansion. At the molecular level tuber development is characterised by a massive increase in starch deposition and the synthesis of a limited number of abundant proteins. These include proteinase inhibitors and a 40kd group of proteins called patatin which are acyl hydrolases. Together these proteins account for over 50% of tuber proteins reviewed by Bevan 1991. The synthesis of these proteins has parallels to the synthesis of other somatic storage proteins especially the VSP proteins of soybean. In both potato and soybean removal of the sink for these proteins tubers and pods respectively causes deposition in other tissues Staswick 1990. It is hypothesised that transcriptional control of the genes encoding these proteins is regulated in part by source-sink relationships of metabolites or other factors. In the case of VSPs both amino acid levels and jasmonic acid play a major regulatory role Staswick et al.

Medicinal and Aromatic Plants of the World Ákos Máthé, 2015-09-30 Medicinal and aromatic plants (MAPs) have accompanied mankind from its very early beginnings. Their utilization has co-evolved with *Homo sapiens* itself bringing about a profound increase in our scientific knowledge of these species enabling them to be used in many facets of our life e.g. pharmaceutical products, feed and food additives, cosmetics etc. Remarkably despite the new renaissance of MAPs usage ca 80% of the world's population is relying on natural substances of plant origin with most of these botanicals sourced from the wild state. This first volume and ultimately the series provides readers with a wealth of information on medicinal and aromatic plants.
