contributors are drawn **As Gods** Matthew Cobb, 2022-11-15 The thrilling and terrifying history of genetic engineering In 2018 scientists manipulated the DNA of human babies for the first time As biologist and historian Matthew Cobb shows in *As Gods* this achievement was one many scientists have feared from the start of the genetic age Four times in the last fifty years geneticists frightened by their own technology have called a temporary halt to their experiments They ought to be frightened Now we have powers that can target the extinction of pests change our own genes or create dangerous new versions of diseases in an attempt to prevent future pandemics Both awe inspiring and chilling *As Gods* traces the history of genetic engineering showing that this revolutionary technology is far too important to be left to the scientists They have the power to change life itself but should we trust them to keep their ingenuity from producing a hellish reality Handbook of Bioentrepreneurship Holger Patzelt, Thomas Brenner, 2008-10-11 Providing an important and timely overview of research on the exciting area of entrepreneurship in biotechnology The *Handbook of Bioentrepreneurship* examines one of the most promising industries of the 21st century While genetically engineered food and biopharmaceuticals have made biotechnology part of our everyday life starting a bioventure is among the most complex and risky entrepreneurial tasks given long development cycles high technological and market uncertainty and high capital intensity Providing unparalleled in depth and detailed analysis this *Handbook* sheds light on business models and strategies financing cooperation networks between firms and universities among other issues With new developments in biotechnology increasingly in the news this is an important source for readers interested in public policy entrepreneurship and business in the 21st century *The Risks of Medical Innovation* Thomas Schlich, Ulrich Tröhler, 2006 Presenting a new way of thinking about the risks of medical innovation this volume considers the issues from a social historical perspective and studies specific cases in their respective contexts

Lindenmann, W.-D. Schleuning, 2013-06-29 Forty years of Interferon I wish to dedicate this short introduction to the memory of Alick Isaacs 1921 1967 and to that of Sir Christopher Andrewes 1896 1988 Let us go back more than 40

years In 1956 Isaacs was in charge of the Wodd Influenza Centre Andrewes was head of the division of bac teriology and virology and deputy director of the National Institute for Medical Research in London When researchers are faced with a seemingly new phenomenon ex planations are easy to come by These explanations fall into two broad categories the phenomenon in question is either due to something or to the lack of something I apologize for the primitive way in which I ex press this but I am going to give three examples scattered over 100 years of what I mean First example in 1880 the great French microbiologist Louis Pas teur was involved in work on chicken cholera He was struck by the following observation if a suitable chicken broth was inoculated with the bacterium the organism grew profusely and the liquid became tur bid If he now freed the fluid by sedimentation or filtration from the bulk of the organisms and re inoculated it with the same bacterium no growth occurred

The Bioengineered Forest Steven H. Strauss,2010-09-30 Bioengineering offers many opportunities for forestry Bioengineered trees can produce more valuable wood help reclaim contaminated land improve the health of urban trees and facilitate pest management But the ecological risks are complex and public views about the ethical acceptability of genetic engineering vary widely Unique in its breadth and diversity The Bioengineered Forest begins with a survey of the range of forestry practices for which the use of biotechnologies might be appropriate Scholars representing diverse academic perspectives and viewpoints examine in depth the economic and environmental rationale for forest biotechnologies and the current state of technology with respect to gene performance and safety They consider the contemporary political and economic environment in which bioengineering is being introduced and where the genomic revolution might take forestry and genetic engineering in the future The Bioengineered Forest presents compelling arguments in favor of genetic engineering Just as powerfully it examines the significant technical and legal hurdles involved in genetic engineering the undesirable environmental and social consequences that might result from its misapplication and the risks for businesses that are looking too exclusively for near term benefits

Impure Cultures Daniel Lee Kleinman,2003-10-15 How are the worlds of university biology and commerce blurring Many university leaders see the amalgamation of academic and commercial cultures as crucial to the future vitality of higher education in the United States In *Impure Cultures* Daniel Lee Kleinman questions the effect of this blending on the character of academic science Using data he gathered as an ethnographic observer in a plant pathology lab at the University of Wisconsin Madison Kleinman examines the infinite and inescapable influence of the commercial world on biology in academia today Contrary to much of the existing literature and common policy practices he argues that the direct and explicit relations between university scientists and industrial concerns are not the gravest threat to academic research Rather Kleinman points to the less direct but more deeply rooted effects of commercial factors on the practice of university biology He shows that to truly understand research done at universities today it is first necessary to explore the systematic pervasive and indirect effects of the commercial world on contemporary academic practice

The Scientific Life Steven Shapin,2009-08-01 Who are scientists What kind of people are they What capacities and virtues are thought to stand behind their considerable authority They are experts indeed highly respected experts authorized to describe and interpret the natural world and widely trusted to help transform knowledge into power and profit But are they morally different from other people The Scientific Life is historian Steven Shapin's story about who scientists are who we think they are and why our sensibilities about such things matter Conventional wisdom has long held that scientists are neither better nor worse than anyone else that personal virtue does not necessarily accompany technical expertise and that scientific practice is profoundly impersonal Shapin however here shows how the uncertainties attending scientific research make the virtues of individual researchers intrinsic to scientific work From the early twentieth century origins of corporate research laboratories to the high flying scientific entrepreneurship of the present Shapin argues that the radical uncertainties of much contemporary science have made personal virtues more central to its practice than ever before and he also reveals how radically novel aspects of late modern science have unexpectedly deep historical roots His elegantly conceived history of the scientific career and character ultimately encourages us to reconsider the very nature of the technical and moral worlds in which we now live Building on the insights of Shapin's last three influential books featuring an utterly fascinating cast of characters and brimming with bold and original claims The Scientific Life is essential reading for anyone wanting to reflect on late modern American culture and how it has been shaped
