Role of the Transcriptome in Breast Cancer Prevention Jose Russo, Irma H. Russo, 2012-11-07 This book will provide the latest advances in molecular and cellular biology for establishing the foundation of a complete understanding of the mechanisms of breast differentiation leading to cancer prevention The authors are based on the epidemiological evidence indicating that early first full term pregnancy is a protective factor in human against breast cancer and they have used this paradigm and developed experimental systems in both in vivo and in vitro that have demonstrated mechanistically how the differentiation at the organ and cellular level takes place This knowledge has provided the blueprint for developing better understanding of the basis of cancer prevention The transcriptome analysis of the breast of pre and post menopausal women has established a genomic signature imprinted in the breast that differs according to the reproductive history of the woman showing that early first full term pregnancy reprogram the organ This reprogramming takes place at the chromatin level by changing the transcriptional process The modification of the transcriptional control is due to the expression of non coding RNA sequences and posttranscriptional control driven by the spliceosome The plasticity of the genome of the human breast make possible this reprogramming that is not only induced by the physiological process of pregnancy but by the use of hormones that mimic pregnancy without pregnancy The author have established the basis of clinical trials for prevention and the discovery that short 15aa peptides of the chorionic gonadotropin hormone can be used in human breast cancer prevention based on preclinical and clinical data

Integration of Multisource Heterogenous Omics Information in Cancer Victor Jin, Junbai Wang, Binhua Tang, 2020-01-30 Multisource heterogenous omics data can provide unprecedented perspectives and insights into cancer studies but also pose great analytical problems for researchers due to the vast amount of data produced This Research Topic aims to provide a forum for sharing ideas tools and results among researchers from various computational cancer biology fields such as genetic epigenetic and genome wide studies

The Retina and Circadian Rhythms Gianluca Tosini, P. Michael Iuvone, Douglas G. McMahon, Shaun P. Collin, 2014-01-09 Daily rhythms are a ubiquitous feature of living systems Generally these rhythms are not just passive consequences of cyclic fluctuations in the environment but instead originate within the organism In mammals including humans the master pacemaker controlling 24 hour rhythms is localized in the suprachiasmatic nuclei of the hypothalamus

SCN This circadian clock is responsible for the temporal organization of a wide variety of functions ranging from sleep and food intake to physiological measures such as body temperature heart rate and hormone release Moreover accumulating evidence suggests that dysfunction of the circadian rhythms due to genetic mutations or environmental factors i e jet lag or shift work contribute to the development of many pathologies including sleep disorders mood and affective disorders such as major depression bipolar disorder and schizophrenia as well as the risk of metabolic and cardiovascular disorders

Network Bioscience, 2nd Edition Marco Pellegrini,Marco Antoniotti,Bud Mishra,2020-03-27 Network science has accelerated a deep and successful trend in research that influences a range of disciplines like mathematics graph theory physics statistics data science and computer science just to name a few and adapts the relevant techniques and insights to address relevant but disparate social biological technological questions We are now in an era of big biological data supported by cost effective high throughput genomic transcriptomic proteomic metabolomic data collection techniques that allow one to take snapshots of the cells molecular profiles in a systematic fashion Moreover recently also phenotypic data data on diseases symptoms patients etc are being collected at nation wide level thus giving us another source of highly related causal big data This wealth of data is usually modeled as networks aka binary relations graphs or webs of interactions including protein protein metabolic signaling and transcription regulatory interactions The network model is a key view point leading to the uncovering of mesoscale phenomena thus providing an essential bridge between the observable phenotypes and omics underlying mechanisms Moreover network analysis is a powerful hypothesis generation tool guiding the scientific cycle of data gathering data interpretation hypothesis generation and hypothesis testing A major challenge in contemporary research is the synthesis of deep insights coming from network science with the wealth of data often noisy contradictory incomplete and difficult to replicate so to answer meaningful biological questions in a quantifiable way using static and dynamic properties of biological networks

Fisher needed to develop elaborate models of genetic effects in order to set the foundations of Quantitative Genetics in his 1918 paper The correlation between relatives on the supposition of Mendelian inheritance Since then many significant implementations have been made to model genetic effects However at the verge of one century after Fisher's kick off models of genetic effects keep on being discussed and implemented Indeed the relatively recent advent of QTL analyses challenged the state of the art of this field by providing researchers the opportunity to obtain and analyze estimates of genetic effects from real data In this context the development of this field was not exempt of some polemics like the debate about the convenience of the functional and the statistical epistasis approaches This research topic is meant to provide recent developments in models and estimation of genetic effects and to enrich the discussion about how and why models of genetic effects must be further developed and applied The articles in this Research Topic shall thus extend refine and or provide a refresh look at Fisher's original models of genetic effects and their application to genetic effects estimation and to improve our understanding of evolutionary processes and breeding programs **Publishers' Trade List Annual, 1980**
